

A close-up photograph of two sloths, likely from the Amazon rainforest, holding hands. The sloths have thick, greyish-brown fur and are looking directly at the camera. Their long, curved claws are visible as they grip each other's hands. The background is a soft, out-of-focus green, suggesting a forest environment. The image is used as a background for a title slide.

Trust And Reciprocity Trust And Reciprocity:

Trust and Reciprocity Elinor Ostrom, James Walker, 2003-02-27 Trust is essential to economic and social transactions of all kinds from choosing a marriage partner to taking a job and even buying a used car The benefits to be gained from such transactions originate in the willingness of individuals to take risks by placing trust in others to behave in cooperative and non exploitative ways But how do humans decide whether or not to trust someone Using findings from evolutionary psychology game theory and laboratory experiments Trust and Reciprocity examines the importance of reciprocal relationships in explaining the origins of trust and trustworthy behavior In Part I contributor Russell Hardin argues that before one can understand trust one must account for the conditions that make someone trustworthy Elinor Ostrom discusses evidence that individuals achieve outcomes better than those predicted by models of game theory based on purely selfish motivations In Part II the book takes on the biological foundations of trust Frans de Waal illustrates the deep evolutionary roots of trust and reciprocity with examples from the animal world such as the way chimpanzees exchange social services like grooming and sharing Other contributors look at the links between evolution cognition and behavior Kevin McCabe examines how the human mind processes the complex commitments that reciprocal relationships require summarizing brain imaging experiments that suggest the frontal lobe region is activated when humans try to cooperate with their fellow humans Acknowledging the importance of game theory as a theoretical model for examining strategic relationships in Part III the contributors tackle the question of how simple game theoretic models must be extended to explain behavior in situations involving trust and reciprocity Reviewing a range of experimental studies Karen Cook and Robin Cooper conclude that trust is dependent on the complex relationships between incentives and individual characteristics and must be examined in light of the social contexts which promote or erode trust As an example Catherine Eckel and Rick Wilson explore how people's cues such as facial expressions and body language affect whether others will trust them The divergent views in this volume are unified by the basic conviction that humans gain through the development of trusting relationships Trust and Reciprocity advances our understanding of what makes people willing or unwilling to take the risks involved in building such relationships and why A Volume in the Russell Sage Foundation Series on Trust **Trust and Reciprocity** Gary Charness, Valentin Shmido, 2014 **Trust and Reciprocity** Elinor Ostrom, James Walker, 2005-06-10 Trust is essential to economic and social transactions of all kinds from choosing a marriage partner to taking a job and even buying a used car The benefits to be gained from such transactions originate in the willingness of individuals to take risks by placing trust in others to behave in cooperative and non exploitative ways But how do humans decide whether or not to trust someone Using findings from evolutionary psychology game theory and laboratory experiments Trust and Reciprocity examines the importance of reciprocal relationships in explaining the origins of trust and trustworthy behavior In Part I contributor Russell Hardin argues that before one can understand trust one must account for the conditions that make

someone trustworthy Elinor Ostrom discusses evidence that individuals achieve outcomes better than those predicted by models of game theory based on purely selfish motivations In Part II the book takes on the biological foundations of trust Frans de Waal illustrates the deep evolutionary roots of trust and reciprocity with examples from the animal world such as the way chimpanzees exchange social services like grooming and sharing Other contributors look at the links between evolution cognition and behavior Kevin McCabe examines how the human mind processes the complex commitments that reciprocal relationships require summarizing brain imaging experiments that suggest the frontal lobe region is activated when humans try to cooperate with their fellow humans Acknowledging the importance of game theory as a theoretical model for examining strategic relationships in Part III the contributors tackle the question of how simple game theoretic models must be extended to explain behavior in situations involving trust and reciprocity Reviewing a range of experimental studies Karen Cook and Robin Cooper conclude that trust is dependent on the complex relationships between incentives and individual characteristics and must be examined in light of the social contexts which promote or erode trust As an example Catherine Eckel and Rick Wilson explore how people's cues such as facial expressions and body language affect whether others will trust them The divergent views in this volume are unified by the basic conviction that humans gain through the development of trusting relationships Trust and Reciprocity advances our understanding of what makes people willing or unwilling to take the risks involved in building such relationships and why A Volume in the Russell Sage Foundation Series on Trust

Representative Trust and Reciprocity Thomas J. Dohmen, Armin Falk, David Huffman, Uwe Sunde, 2008 This paper provides evidence about the determinants of trust and reciprocal inclinations that is a tendency for people to respond in kind to hostile or kind actions in a representative setting We investigate the prevalence of reciprocity in the population the correlation between trust and positive and negative reciprocal inclinations within person the individual determinants of reciprocity and the relationship with psychological measures of personality We find that most people state reciprocal inclinations in particular in terms of positive reciprocity as well as substantial heterogeneity in the degree of trust and reciprocity Trust and positive reciprocity are only weakly correlated while trust and negative reciprocity exhibit a negative correlation In terms of determinants being female and increasing age are associated with stronger positive and weaker negative reciprocal tendencies Taller people are more positively reciprocal but height has no impact on negative reciprocity Psychological traits also affect trust and reciprocity JEL D63 J3 J6

Trust and Reciprocity Fei Song, 2006 This paper presents evidence that trust and reciprocity behavior and perceptions is sensitive to whether people are making decisions solely on their own behalf or when they are given the responsibility to act on behalf of their groups Employing the widely used experimental framework of the trust game Berg et al 1995 with salient monetary payoffs I examine and contrast the level of trust and reciprocity exhibited by individuals in inter individual interactions with those exhibited by the same individual when he she is responsible for a group decision The results suggest that people trust less and reciprocate less

when responsible for a group or organizational decision I also explore perceptions about trust and reciprocity behavior of one's own and that of others in the study and find that there are disconnections between perspectives of parties involved about the interaction and the actual observed behavior. The evidence reported here is consistent with the idea that people are poor at making hypothetical predictions; highlights the disconnections between behavioral forecasts and behavior. Lastly, this paper also makes an important advance in our understanding of the norm of reciprocity. Theoretical and practical implications are offered.

Trust and Reciprocity Among International Groups Kenju Akai, Robert J. Netzer, 2010

This paper explores national identity in trust and reciprocity at the intra and international levels by adopting a modified trust game played among groups from Austria and Japan in which subjects play the roles of trustor and trustee consecutively without any information feedback. Intra and international trust levels are identical across nationalities. Intranational reciprocity in Austria is greater than in Japan but there is no significant difference in international reciprocity between the two countries. We also examine the relationship between trust and reciprocity and the relationship between trust reciprocity and expectations demographic variables the individualism index and trust indices. International trust enhances international reciprocity in both countries although this effect is weaker in Japan than in Austria. Expected returns enhance trust in both countries at the intra and international levels. In Japan, expected transfers enhance international reciprocity less than they do intranational reciprocity. A larger number of females in the group reduce international trust. In Austria, this reduces international trust more than it does intranational trust.

Trust and Reciprocity in Inter-Individual Versus Inter-Team Interactions Fei Song, 2007

Understanding social motives and norms of trust and reciprocity is essential for explaining many phenomena in organizations. A primary goal of this research is to extend past work on trust and reciprocity by examining the impact of the social contexts within which social interactions are characteristically embedded. Specifically, my research concerns whether norms of trust and reciprocity differ in the contexts of inter-individual and inter-group interactions when inter-team decisions are operationalized by individuals making decisions for their teams as team representatives. Methodologically, by employing the widely used experimental framework of the trust game with salient monetary payoffs, I examine the within-person variation of behavior and perceptions of trust and reciprocity in these two types of interactions that are pervasive in organizational life. Findings of the experimental study suggest that norms of trust and reciprocity can be affected by many subtle contextual details.

Trust, Reciprocity and Rules Thomas Rietz, 2017

Many economic interactions rely on trust which is sometimes violated. The fallout from business fraud and other malfeasance shows serious economic consequences of trust violations. Simple rules mandating minimum standards are attractive because they prevent the most egregious trust violations. However, such rules may undermine more trusting and reciprocal trustworthy behavior that otherwise would have occurred and thus lead to worse outcomes. We use an

experimental trust game to test the efficacy of exogenously imposed minimum standard rules Rules fail to increase trust and reciprocity leading to lower economic welfare Although sufficiently restrictive rules restore welfare trust and reciprocity never return The pattern of results is consistent with participants who are not only concerned with payoffs but also use the game to learn about trust and trustworthiness of others

Networks, Trust and Social Capital Sokratis M. Koniordos, 2017-03-02 The concepts of social networks social capital and trust play an increasingly central role in the social sciences They have become indispensable conceptual tools for the analysis of post industrial late modern societies which are characterized by such features as the relative decline of formal hierarchies the development of flexible social arrangements in the sphere of production and the extreme mobility of capital This is the first book to study the interrelationships between these important concepts both theoretically and empirically Drawing on empirical investigations from a range of diverse European social contexts the contributors develop an economic sociology that builds on and extends established theoretical perspectives The book opens with an introduction to the theoretical ideas relating social capital to reciprocity trust and social networks in line with current debates The authors go on to discuss the concept of social embeddedness addressing the economic effects of social capital by examining the network and trust foundations of labour markets and investigating the structural limits of trusting networks They conclude with an exploration of the impact of networking and the functioning of trust and social capital on the economic arrangements and performance of nascent capitalist economies in post Communist Europe This thematically unified collection by a team of
