

Lower Body Exercises

Lower body work on the TRX integrates core activation and results in more effective training for strength, stability and power. Because some percentage of bodyweight is unloaded onto the TRX, lower body exercises can be performed through greater ranges of motion safely with less stress. In addition, Suspension Training allows for unilateral (single) leg training in more variations, which delivers more effective results than any other training tool. Unilateral leg training is appropriate for all levels of fitness and performance training to teach and improve movement, flexibility, strength, agility and power.

TRX Single Leg Squat

(with hop)

ADJUSTMENT: M
