

HOT WATER SHUT OFF VALVE (ENGINE)

To maximize the efficiency of the air conditioning, the heat control on the A/C heater control panel must be rotated to the "OFF" position. During times when cab heating is not required the HOT WATER SHUT OFF VALVE, on the heater hose from the engine, should also be closed to prevent hot water from seeping through the a/c unit, thereby reducing the cooling system effect.

FILTER, RECIRCULATING AIR - A/C UNIT

When the control knob (3) is in the RECIRCULATING position (rotated to the left), air in the cab is drawn into the A/C-HEATER unit via this filter and recirculated. The filter is located at the base of the A/C unit. It should be cleaned or replaced every 125 hours. This is done by removing two thumb screws in the filter box cover.

FILTER - FRESH AIR

When the control knob (3) is in the FRESH position (rotated to the right), outside air is drawn into the cab air conditioning unit through this filter and mixed with interior air from the cab. The filter is accessible from outside of the cab, at the back between the lights. It should be cleaned or replaced every 125 hours. This is done by removing 5 bolts (3/8) and removing the air inlet cover. Next remove two nuts (1/4) and remove the filter box cover. This will allow access to the filter.

WARNING - These filters may require cleaning or replacement more frequently under extreme operating conditions.

HEAT - VARIABLE

This is a variable, rotary dial to adjust the amount of heated air for the cab. **Make sure this control is off, when using the air conditioning.**
