Pre Installation Check :

A) Independent Mode :

- 2) Connect single wire to terminal "C" of controller and connect its open end to all the terminals individually (one by one) and ensure that their respective "LED" s glow and relay contacts changeover.
- 3) The controller is ready for installation on above results being positive.

B) Latched Mode:

Latching means, initially if Low level is ON then it remains ON till High level reaches & vice versa. Initially if controller is not provided with latching mode, keep the DIP switch no.2 & 7 in ON condition, however to achieve latching mode refer following.

- 1) Power ON the controller, see that GREEN color LED is glowing.
- 2) Check the Latching between L1 & L2 level.
- 3) Make the DIP switch combinations as.
- 4) DIP 1 Switch : 4 & 6 ON
- 5) See the LED L2 is ON & RL2 is ON
- 6) Now short the terminals C, 2 & 1 thro' wire, see the LED L1 & Relay RL1 is ON and LED L2, Relay RL2 turns OFF. L1 remains ON even if we remove the short of C & 1 (L1 level). Now remove the short of C & 2 also. Now LED L2, Relay RL2 turns ON and LED L1, Relay RL1 turns OFF.
- 7) Similarly check Latching between L3 & L4 level by DIP2 Switch : 4 & 6 ON.

Advanced Digital Auditing Egon Berghout, Rob Fijneman, Lennard Hendriks, Mona de Boer, Bert-Jan Butijn, 2022-10-29 This open access book discusses the most modern approach to auditing complex digital systems and technologies It combines proven auditing approaches advanced programming techniques and complex application areas and covers the latest findings on theory and practice in this rapidly developing field Especially for those who want to learn more about novel approaches to testing complex information systems and related technologies such as blockchain and self learning systems the book will be a valuable resource It is aimed at students and practitioners who are interested in contemporary technology and managerial implications Underwater Robots Junku Yuh, Tamaki Ura, George A. Bekey, 2012-12-06 All life came from sea but all robots were born on land The vast majority of both industrial and mobile robots operate on land since the technology to allow them to operate in and under the ocean has only become available in recent years A number of complex issues due to the unstructured hazardous undersea environment makes it difficult to travel in the ocean while today s technologies allow humans to land on the moon and robots to travel to Mars Clearly the obstacles to allowing robots to operate in a saline aqueous and pressurized environment are formidable Mobile robots operating on land work under nearly constant atmospheric pressure their legs or wheels or tracks can operate on a firm footing their bearings are not subjected to moisture and corrosion they can use simple visual sensing and be observed by their creators working in simple environments In contrast consider the environment where undersea robots must operate The pressure they are subjected to can be enormous thus requiring extremely rugged designs The deep oceans range between 19 000 to 36 000 ft At a mere 33 foot depth the pressure will be twice the normal one atmosphere pressure of 29.4 psi The chemical environment of the sea is highly corrosive thus requiring the use of special materials Lubrication of moving parts in water is also difficult and may require special sealed waterproof joints
