Environment and Our Changing Climate Alisdair McGregor, Cole Roberts, Fiona Cousins, 2013-05-02 The Earth's temperature has been rising To limit catastrophic outcomes the international scientific community has set a challenging goal of no more than two degrees Celsius 3.6 degrees Fahrenheit average temperature rise Economists agree we will save trillions of dollars by acting early But how do we act successfully And what's the backup plan if we fall short Setting politics aside **Two Degrees** reviews the current science and explains how we can set practical steps to reduce the extent of warming and to adapt to the inevitable changes all while improving the bottom line beautifying our communities and increasing human health The book is a practical guide intended for a broad audience of those who occupy and shape our built environment The authors provide a clear framework for communities policy makers planners designers developers builders and operators to help manage the impacts and capture the opportunities of our changing climate **Two Degrees** is divided into three sections Fundamentals Mitigation and Adaptation covering a diverse array of topics ranging from climate positive communities and low carbon buildings to the psychology of choice and the cost of a low carbon economy After a foreword by Amory Lovins more than 10 contributing authors share knowledge based on direct experience in all aspects of built environment practice This book clarifies the misconceptions provides new and unique insights and shows how a better approach to the built environment can increase resilience and positively shape our future *Simon Dalby: A Pioneer in International Relations*

Simon Dalby, Roger Boyd, 2025-06-11 This book profiles Simon Dalby's academic contributions in the fields of critical geopolitics environmental security and the intersection of international relations and the Anthropocene It includes reprints of key essays that highlight innovations in critical thought at the intersections between geopolitics environment and security Starting with an analysis of American reconstructions of the Soviet threat in the 1970s an early contribution to the emerging field of critical geopolitics subsequent papers focus on the emergent formulations of environmental security in the aftermath of the Cold War and the environmental costs of globalization Focusing on the implicit geographical framing in discourses of globalization offered a critique that extended the ambit of critical geopolitics to grapple with the issues of environmental security and the rising concern with climate change as well as the political identities invoked in that debate In the aftermath of 9/11 similar arguments about contextualization applied to the American global war on terror and the revival of discussions of empire and its geographies both in arguments for invading Iraq as well as the wider discussions in policy discourse and popular culture Simultaneously the emergence of earth system science and the concept of the Anthropocene offered another way to highlight the dangers of fossil fueled economic activities The necessity of fundamentally rethinking the premises of

security policy in light of this recontextualization is emphasized in more recent contributions on climate security and the current ecological crisis Critical geopolitics Environmental security Global war on terror Firepower in the Anthropocene

Climate and Health Education: Defining the Needs of Society in a Changing Climate Cecilia Sorensen, Gaurab Basu, Lisa H. Patel, Arianne Teherani, 2023-11-16 The adverse effects of climate change are now apparent and present urgent and complex challenges to human health and health systems globally There is an imperative for quick action on many fronts to recognize and respond to climate health threats prevent climate change at its source by reducing greenhouse gas emissions support greener systems throughout the economy including healthcare understand the health co benefits of adaptation and mitigation and communicate effectively about these issues Climate change is intertwined with historical and structural inequities and effective solutions must actively improve health equity To meaningfully address these deep and interconnected issues there is a growing imperative across the educational landscape to move beyond existing constraints toward new ways of thinking and learning Many have recognized that we must create societal systems that account for the health of all people now and into the future while simultaneously preserving and improving the environment on which our life depends Such transformations rest on the skills knowledge values and attitudes of the workforce not just in health and health care but within all sectors However despite the health crisis of climate change at our doorstep development of climate and health curricula is nascent although is a growing consideration of leaders globally Because the health impacts from climate and planetary change are so myriad and intertwined sectors must work together like never before to move beyond existing silos of practice to a shared landscape and vision in practice but first in education

Housing, the Environment, and Our Changing Climate Christoph Sinn, John Perry, 2008 The climate is changing and this book aims to capture both ways in which this is true First the global warming which is taking place as our atmosphere is forced to absorb ever more man made carbon dioxide is now an indisputable reality It is not too late to prevent the worst effects of such climate change but in any event it will have a profound impact on the way we live and the kinds of houses we need Second the climate is changing albeit slowly in terms of the response by the housing world to the challenge of global warming Government has instigated a radical approach to environmental standards for new housing but has arguably been slower to realise the urgency of action to tackle poor environmental standards in the existing housing stock This completely new version of the earlier book *Housing and the Environment* A new agenda concentrates on the linked issues of climate change fuel shortages and fuel poverty

Smart Building in a Changing Climate Andy van den Dobbelsteen, Machiel van Dorst, Arjen van Timmeren, 2009 Climate change and peak fuel are issues that affect society technology politics market and also our built environment Rather than just adapting to these changes a positive pro active approach is needed combining sustainable policy planning and design *Smart Building in a Changing Climate* presents the latest developments in the area of climate responsive energy effective policy planning and design It includes the latest visions ideas designs and technology for a sustainable future on various scales and points at

possible directions for the built environment to answer the challenges of climate change in a pro active and integrative way
