Thinking Architecture 3rd Edition:

Thinking Architecture Peter Zumthor, 1998 Featuring four essays by Peter Zumthor this volume exhibits the essence of Zumthor's architectural ideas *Thinking Architecture* Peter Zumthor, 2010 Here Peter Zumthor articulates what motivates him to design his buildings which appeal to the visitor's heart and mind in so many different ways and possess a compelling and unmistakable presence and aura *Thinking Through Twentieth-Century Architecture* Nicholas Ray, 2023-02-08 Shortlisted for the Architectural Book Awards 2024 *Thinking Through Twentieth Century Architecture* connects the practice of architecture with its recent history and its theoretical origins those philosophical ideas that lay behind modernism and its aftermath By analyzing in straightforward and jargon free language the genesis of modernism and the complex reactions to it the book clarifies a continuing debate It has been specifically written to connect issues of theory history and contemporary practice and to allow students to make these connections easily This is a history of twentieth century architecture written with close critical attention to the theories that lie behind the works described Importantly unlike other historical accounts it does not take sides and urge the reader to identify with one strand of thinking or style of architecture at the expense of others but it presents a dispassionate view with persuasive arguments on behalf of different positions It pursues the history of European and American architecture chronologically but the history is interwoven with the philosophical ideas that informed both writers and architects and are essential for its understanding The book is relevant to current issues of contemporary practice and education showing that philosophical issues are fundamental and those relating to design decisions never go away It includes 200 illustrations and will appeal to all those interested in twentieth century architecture and to architectural students **Cultural Patterns And Neurocognitive Circuits: East-west Connections** Jan Wouter Vasbinder, Balazs Gulyas, 2016-09-16 Our age is characterized by global access to information places and cultures we can gain more and more knowledge about the others other people and their cultures by indirect knowledge learning about them via the global information net assisted by electronic and other high tech communication channels as well as by direct knowledge personally visiting various parts of the world and meeting local people in their own natural and social environments East and West two major worlds of aspirations cultures world views theoretical and practical approaches to life and death have come closer by personal experiences of both Westerners and Easterners But do we really understand the similarities and differences between the cultural cognitive behavioural emotional patterns of the East and the West with special regard to their neurobiological underpinnings in the human brain The contents of this book focus on cultural patterns and cognitive patterns in the East and West with special regard to those patterns which are determined by our natural genetic endowments in contrast to those patterns which are influenced by our cultural East West influences and within this context a unique flavour is given to the good life aspects of adapting to this global community Published in collaboration with Institute Para Limes *New Design for Old Buildings* Roger Hunt, Iain Boyd, 2019-07-25 This book is a celebration of good

new design for old buildings and the SPAB philosophy that good new architecture can sit happily alongside old and is preferable to pastiche Endorsing the value of architects who are engaged to work in the historic environment this book explores design materials and technical considerations in creating the best low energy ecological and sustainable retrofits It has never been more important to understand how old buildings can be adapted to make them useful and sustainable in the future Showcasing the best examples of imaginative design and best practice this book illustrates how old buildings can be made sustainable through the best new design and puts these design exemplars into a historical and philosophical context With illustrative case studies and interviews throughout including formal buildings churches domestic buildings commercial industrial and agricultural from all periods in the UK New Design for Old Buildings provides essential guidance on good imaginative new design for old buildings *An Architecture of Place* Randall S. Lindstrom, 2024-06-25 Challenging mainstream architecture's understandings of place this book offers an illuminating clarification that allows the idea's centrality in all aspects of everyday design thinking to be rediscovered or considered for the first time Rigorous but not dense practical but not trivialising the book unfolds on three fronts First it clearly frames the pertinent aspects of topology the philosophy of place importantly differentiating two concepts that architecture regularly conflates place and space Second it rejects the ubiquitous notion that architecture makes place and instead reasons that place is what makes architecture and the built environment possible that place calls for and to architecture and that architecture is thus invited to listen and respond Finally it turns to the matter of designing responses that result not just in more places of architecture demanding little of design nor merely in architecture with some sense of place demanding little more but rising above those responses that constitute an architecture of place demanding the greatest vigilance but offering the utmost freedom Opening up a term regarded as so common that its meaning is seldom considered the author reveals the actual depth and richness of place its innateness to architecture and its essentiality to practitioners clients educators and students including those in all spatial disciplines **The Routledge Companion to Smart Design Thinking in Architecture & Urbanism for a Sustainable, Living Planet** Mitra Kanaani, 2024-11-11 This comprehensive companion surveys intelligent design thinking in architecture and urbanism investigates multiple facets of smart approaches to design thinking that augment the potentials of user experiences as well as his/her physical and mental interactions with the built environment Split into six paradigms this volume looks at the theoretical and historical background of smart design smart design methodologies and typologies smart materials smart design for extreme weather and climatic regions as well as climate change issues and side effects smart mobility and the role of digital technologies and simulations in architectural and urban design Often at odds with each other this volume places emphasis on smart design for various typologies and user groups emphasizing on advancements in form making and implementation of technology for healthy and sustainable living environments Written by emerging and established architects planners designers scientists and engineers from around the globe this will be an essential reference
