Trauma Informed Care Guide I Volume 1:

Prescriber's Guide - Children and Adolescents: Volume 1 Stephen M. Stahl, 2018-10-18 Child and adolescent psychopharmacology is a rapidly growing field with psychotropic medications used widely in the treatment of this patient group. However, psychopharmacological treatment guidelines used for adults cannot simply be applied for children or adolescents, thus presenting clinicians and nurse practitioners with assessment and prescribing challenges. Based on the best-selling resource Stahl's Prescriber's Guide, this new book provides a user-friendly step-by-step manual on the range of psychotropic drugs prescribed for children and adolescents by clinicians and nurse practitioners. Reviewed by expert child and adolescent psychiatrists, the medications are presented in the same design format in order to facilitate rapid access to information. Each drug is broken down into a number of sections, each designated by a unique color background, thereby clearly distinguishing information presented on therapeutics, safety, and tolerability, dosing, and use, what to expect, special populations, and the art of psychopharmacology, followed by key references.

Trauma-Informed Reproductive Healthcare Angela Lawson, Amelia Swanson, 2024-11-15 Patients seeking fertility care may have experienced trauma prior to their fertility journey and often have experienced trauma as part of the fertility process itself. It is important for medical and administrative professionals that are involved in providing care to fertility patients to understand how to deliver care from a trauma-informed perspective. This is particularly important as the medical evaluation and treatment for fertility patients often involves invasive questions and procedures that can be difficult for patients with a history of trauma. While exposure to trauma has an international impact, this book is focused primarily on the research and experiences of reproductive medicine patients in the United States. It begins with a broad overview of trauma-informed care and then goes on to focus on specific types of traumas that are likely to impact reproductive patients, including reproductive loss, sexual trauma, medical trauma, trauma perpetrated on individuals due to their sexual orientation or gender expression, identity, racial trauma, or discrimination, and paramilitary trauma. The final chapters of the book are tailored to medical professionals, healthcare administrators, and mental health professionals with recommendations for how to incorporate trauma-informed care for their specific role in the healthcare team. This text highlights how trauma-informed care principles apply to reproductive medicine and how trauma-informed care can support specific patient populations, such as those with a history of sexual trauma, medical trauma, reproductive loss, and patients that have experienced discrimination due to their sexual orientation, gender identity, or race. Trauma-Informed Reproductive Healthcare provides specific recommendations and best practices for medical professionals and administrators in transforming their practice to be trauma-informed.
