Translational Perspectives in Auditory Neuroscience Kelly L. Tremblay, Robert F. Burkhard, 2012-06-29 *Cochlear Implants* Jace Wolfe, 2018-12-14 *Cochlear Implants Audiologic Management and Considerations for Implantable Hearing Devices* provides comprehensive coverage of the audiological principles and practices pertaining to cochlear implants and other implantable hearing technologies This is the first and only book that is written specifically for audiologists and that exhaustively addresses the details involved with the assessment and management of cochlear implant technology Additionally this book provides a through overview of hybrid cochlear implants implantable bone conduction hearing technology middle ear implantable devices and auditory brainstem implants Key Features Each chapter features an abundance of figures supporting the clinical practices and principles discussed in the text and enabling students and clinicians to more easily understand and apply the material to clinical practice The information is evidence based and whenever possible is supported by up to date peer reviewed research Provides comprehensive coverage of complex information and sophisticated technology in a manner that is student friendly and in an easily understandable narrative form Concepts covered in the narrative text are presented clearly and then reinforced through additional learning aids including case studies and video examples Full color design with numerous figures and illustrations *Cochlear Implants* is the perfect choice for graduate level courses covering implantable hearing technologies because the book provides a widespread yet intricate description of every implantable hearing technology available for clinical use today This textbook is an invaluable resource and reference for both audiology graduate students and clinical audiologists who work with implantable hearing devices Furthermore this book supplements the evidence based clinical information provided for a variety of implantable hearing devices with clinical videos demonstrating basic management procedures and practices

Alterations in the Sound Localization Pathway Related to Impaired Cocktail-Party Performance Achim Klug, Leonard Kaczmarek, Elizabeth Anne McCullagh, Dan Tollin, 2022-05-09 **Aging and Hearing** Karen S. Helfer, Edward L. Bartlett, Arthur N. Popper, Richard R. Fay, 2020-10-20 Since the first edition of the *Aging Auditory System* volume in 2009 there has been a tremendous amount of research in basic translational and clinical sciences related to age related changes in auditory system structure and function The new research has been driven by technical and conceptual advances in auditory neuroscience at multiple levels ranging from cells to cognition The chapters in *Aging and Hearing* Causes and Consequences span a broad range of topics and appeal to a relatively wide audience Our goal in this volume is to put together state of the art discussions about new developments in aging research that will appeal to a broad audience serving as an important update on the current state of research on the aging auditory system This update includes not only the recent research but also consideration of how human and animal studies or translational and basic research are working in tandem to advance the field This new edition is a natural complement to the previous SHAR volume on the aging auditory system edited by Gordon Salant Frisina Popper and Fay The

target audience for this volume will be graduate students researchers and academic faculty from a range of disciplines psychology hearing science audiology physiology neuroscience engineering It also will appeal to clinical audiologists as well as to researchers working in the hearing device industry Individuals who attend conferences sponsored by the Association for Research in Otolaryngology Acoustical Society of America Auditory Cognitive Neuroscience Society American Auditory Society Society for Neuroscience American Speech Language and Hearing Association and the American Academy of Audiology among others are likely to find value in the volume

How and Why Does Spatial-Hearing Ability Differ among Listeners? What Is the Role of Learning and Multisensory Interactions? Guillaume Andéol, Brian D. Simpson, Ewan A. Macpherson, 2016-08-29 Spatial hearing ability has been found to vary widely across listeners A survey of the existing auditory space perception literature suggests that three main types of factors may account for this variability physical factors e g acoustical characteristics related to sound localization cues perceptual factors e g sensory cognitive processing perceptual learning multisensory interactions and methodological factors e g differences in stimulus presentation methods across studies However the extent to which these and perhaps other still unidentified factors actually contribute to the observed variability in spatial hearing across individuals with normal hearing or within special populations e g hearing impaired listeners remains largely unknown Likewise the role of perceptual learning and multisensory interactions in the emergence of a multimodal but unified representation of auditory space is still an active topic of research A better characterization and understanding of the determinants of inter individual variability in spatial hearing and of its relationship with perceptual learning and multisensory interactions would have numerous benefits In particular it would enhance the design of rehabilitative devices and of human machine interfaces involving auditory or multimodal space perception such as virtual auditory multimodal displays in aeronautics or navigational aids for the visually impaired For this Research Topic we have considered manuscripts that present new methods or review existing methods for the study of inter individual differences present new data or review existing data concerning acoustical features relevant for explaining inter individual differences in sound localization performance present new or review existing psychophysical or neurophysiological findings concerning spatial hearing and or auditory perceptual learning and or multisensory interactions in humans normal or impaired young or older listeners or other species discuss the influence of inter individual differences on the design and use of assistive listening devices rehabilitation or human machine interfaces involving spatial hearing or multimodal perception of space ergonomics
