Forensic Science Progress, 2012-12-06 Thermal analysis methods have been introduced into forensic sciences only in recent times Though thermoanalytical instruments have been available commercially for some decades it was not until the beginning of the seventies that forensic scientists became interested in them At that time some state forensic science laboratories in the Federal Republic of Germany made use of differential thermal analysis for forensic

soil investigations The forensic science section of the city police of ZUrich Switzerland applied an instrument differential thermal analysis and thermogravimetry for various purposes Investigations of fibers by means of differential scanning calorimetry were reported by the Centre of Forensic Sciences at Toronto Canada and on the characterization of candle waxes by differential thermal analysis by the Metropolitan Police Forensic Science Laboratory London England Later on some other institutions like the Bundeskriminalamt at Wiesbaden Germany or the Home Office Central Research Establishment at Aldermaston England purchased instruments for one or more of the following thermal analysis methods differential thermal analysis or differential scanning calorimetry thermogravimetry and thermomechanical analysis But even now thermoanalytical instruments are not widespread in forensic science institutes and knowledge of their forensic potential seems to be limited In the following chapters we will give a survey of the most important thermal analysis methods mentioned above and on current forensic applications and or fields of actual research efforts

Turi (ed),

Polymer Characterization Techniques and Their Application to Blends George P. Simon, 2003 This book aims to introduce the reader to a wide range of polymer characterization techniques including thermal rheology mechanical relaxational scattering and spectroscopic analysis In addition to discussing the techniques and their experimental considerations in general the chapters will show how the techniques are applied to polymer systems and how the data obtained is analyzed and interpreted In order to connect each technique to applications each chapter explains the use of the technique in the popular application of polymer blends The blending of polymers continues to be a major area of polymer research in academia and

industry and in addition to its instructive role each chapter serves as a review of the blend literature as relevant to a polymer blends researcher
