

TPA Cybersecurity Assessment Report (CAR)

Cybersecurity Maturity Domains and IAFs			
	IAFs Achieved	IAFs Achieved	Improvement Needed
Domain 1: Cyber Risk Management and Oversight	57	40.42%	84
Domain 2: Threat Intelligence and Collaboration	14	31.81%	30
Domain 3: Cybersecurity Controls	73	48.99%	76
Domain 4: External Dependency Management	12	27.27%	32
Domain 5: Cyber Incident Management and Resilience	28	36.84%	48
Totals:	184		270
Percentage:	40.53%		59.47%

Overall, the achievement level at TPA is only 40.53 percent against the entire population of IAFs. This is not a "bad" score for an organization that has overall Inherent Risks that are present and have been measured as just within the "Minimal" Inherent Risk Level.

The lowest score is within the "External Dependency" Domain. TPA's has very limited contact with and use of external information processing. It is clear that Management and the staff are not looking for inherent risks in this area because their information technology ecosystem does not contain information processing by outsiders other than the storage of backups.

Only very large and complex organizations have to address achievement within all IAFs. Example would be if FinlandRe preformed this same assessment it would most likely be at the "Most" Inherent Risk Level. For this level of inherent risk, the initial assessment should have IAFs achievement of over 95% or the assessor would be extremely concerned about the condition of Cybersecurity internal control framework.

Achievement Within Required Levels of Maturity

This next viewpoint looks at a summary of the IAFs that would be considered within the two maturity levels that TPA has to embrace as its focus for the required cybersecurity internal control framework elements to meet its needs. TPA's Inherent Risk Level is just

Otero-Losada,Francisco G. Wandosell,Luis Miguel Garcia-Segura,Francisco Capani,2019-08-30 Despite compelling preclinical evidence from laboratory models of brain hypoxia suggesting potential neuroprotective strategies only scattered data are available from clinical studies A few candidate neuroprotectants have been studied regarding antioxidant antiapoptotic anti excitotoxic immunomodulatory and neurotrophic effects In parallel with clinical innovations preclinical research initiatives are also identifying new animal models more closely resembling the clinical course and pathology of neurodegenerative diseases Clarifying the specific mission of the brain cells involved in the damage repair system in the examined animal models is important to define new therapeutic targets Following hypoxic damage detrimental events intermingle with the repairing events in both time and cellular dependent fashion Identifying reliable post hypoxia brain markers is mandatory to

develop potential therapeutic interventions improving translational research from the experimental observations to the clinical application A deeper understanding of the precise participation of neurons glia and endothelial cells is expected to offer more clues for designing new therapeutic strategies to reduce the current gap among the experimental and the clinical data One of the main issues should be to study the epigenetic mechanism of neuroprotective agents and their action on the genetic modification induced by hypoxia Achieving this goal is presumed critical to obtain more conclusive results in patients that by now do not receive appropriate therapy for mitigating the several diseases generated by brain hypoxia Although a few ongoing studies are evaluating interesting approaches future research is necessary to come to a novel mechanism of neuroprotection This book encompasses different chapters conveying the goals and aims of the pertaining research
