**Drugs** S. Görög,2000-05-19 Impurity profiling is the common name of a group of analytical activities the aim of which is the detection identification structure elucidation and quantitative determination of organic and inorganic impurities as well as residual solvents in bulk drugs and pharmaceutical formulations Since this is the best way to characterise the quality and stability of bulk drugs and pharmaceutical formulations this is the core activity in modern drug analysis Due to the very rapid development of the analytical methodologies available for this purpose and the similarly rapid increase of the demands as regards the purity of drugs it is an important task to give a summary of the problems and the various possibilities offered by modern analytical chemistry for their solution That is the aim of this book The book is methodology oriented In the first chapter some important aspects of the background of impurity related analytical studies toxicological pharmacopoeial aspects the characterisation of the sources of impurities and the role of impurity profiling in various fields of drug research production and therapeutic use are summarised Chapter two deals with related organic impurities the strategies for impurity profiling the use of chromatographic and related separation methods spectroscopic and hyphenated techniques The subject of the third chapter is the identification and determination of residual solvents The determination of inorganic impurities is discussed in chapter four The special problems of degradation products as impurities are dealt with in chapter five A separate chapter has been compiled to deal with one of the most up to date problems in contemporary pharmaceutical analysis the estimation of enantiomeric purity of chiral drugs Chapter seven is devoted to various approaches to solve the

problem of polymorphic modifications as impurities Since in the broader sense of the word the microbiological purity of drugs and drug products also belongs to this circle the most important information from this field is summarised in chapter eight After the mainly methodology oriented chapters the final one concentrates on four groups of drugs peptides biotechnological products antibiotics and steroids in order to demonstrate the use of the methods described earlier
