Manufacturing of Natural Fibre Reinforced Polymer Composites Mohd Sapuan Salit, Mohammad Jawaid, Nukman Bin Yusoff, M. Enamul Hoque, 2015-09-10 Natural fibre composite is an emerging material that has great potential to be used in engineering application Oil palm sugar palm bagasse coir banana stem hemp jute sisal kenaf roselle rice husk betel nut husk and cocoa pod are among the natural fibres reported to be used as reinforcing materials in polymer composites Natural fibre composites were used in many industries such as automotive building furniture marine and aerospace industries The advantages of natural fibre composites include low cost renewable abundance light weight less abrasive and they are suitable to be used in semi or non structural engineering components Research on various aspects of natural fibre composites such as characterization determination of properties and design have been extensively carried out However publications that reported on research of manufacture of natural fibre composites are very limited Specifically although manufacturing methods of components from natural fibre composites are similar to those of components from conventional fibre composites such as glass carbon and Kevlar fibres modification of equipment used for conventional fibre composites may be required This book fills the gap of knowledge in the field of natural fibre composites for the research community Among the methods reported that are being used to produce components from natural fibre composites include hand lay up compression moulding filament winding injection moulding resin transfer moulding pultrusion and vacuum bag moulding This book is also intended to address some research on secondary processing such as machining and laser welding of natural fibre composites It is hoped that publication of this book will provide the readers new knowledge and understanding on the manufacture of natural fibre composites

Marine Microbiome and Microbial Bioprospecting Manikkam Radhakrishnan, Parli Venkateswaran Bhaskar, Abirami Baskaran, Kaari Manigundan, 2025-10-01 Marine Microbiome and Microbial Bioprospecting Diversity and Bioactive Potential comprehensively discusses the diversity

of microbes present in various marine ecosystems their bioprospecting potential and how they can be utilized to derive bioproducts that benefit different fields and industries Sections overview marine microbes their ex situ conservation and the tools and techniques used to study marine microbial diversity and taxonomy In addition it explores and details microorganisms in different marine ecosystems and considers how bioactive metabolites from diverse marine microorganisms can be harnessed to combat pathogens used in industrial products and in environmental remediation and degradation and enhanced for agricultural and aquaculture applications With contributions from experts in the field this book aims to be a valuable resource for researchers and industry professionals in microbiology and biotechnology and anyone involved in finding lead molecules from marine microbial resources for wide ranging applications Discusses existing and novel metabolites from marine microbes Offers tools and techniques to exploit marine microbial resources Explores the applications of marine microbial bioproducts

Human Immunodeficiency Virus type 1 (HIV-1) and Breastfeeding Athena P. Kourtis, Marc Bulterys, 2012-03-28 The HIV pandemic continues to levy a heavy burden on the human race world wide The estimated number of people who became newly infected with HIV in 2009 was 2.6 million most of these individuals live in Sub Saharan Africa followed by India and Southeast Asia An estimated 370 000 new cases of pediatric infections occurred globally in 2009 or more than 1 000 new infections every day practically all of them through mother to child transmission Up to 40% of all new infant HIV infections occur during breastfeeding While breastfeeding by HIV infected mothers is not recommended in the U S and other resource rich settings where safe replacement feeding is easily available the situation is different in many resource limited settings where replacement feeding is not safe or available and carries a high risk of infections diarrhea pneumonia and infant malnutrition Mothers in such settings are faced with a difficult dilemma to breastfeed their infants in order to provide their infants with its many benefits nutritional immunologic cognitive but to also risk transmitting HIV These challenges have prompted an intensive search for new prophylactic and therapeutic strategies in order to prevent infants from acquiring HIV infection through breastfeeding In this book expert HIV researchers critically review every aspect of this highly evolving and topical subject The opening chapters deal with the epidemiology global magnitude and biologic mechanisms of HIV 1 transmission from mother to child through breastfeeding and include considerations of the virus quantity compartments characteristics and the host genetic immunity innate cellular humoral The effects of breastfeeding on the HIV infected mother s health and nutritional status and the social and cultural issues associated with the practice of breastfeeding are also discussed The next few chapters provide cutting edge reviews of the latest approaches to prevention of HIV transmission to the infant through breastfeeding including antiretroviral strategies nutritional and immune based approaches and treatment of expressed breast milk The remaining chapters provide a fascinating review of the many iterations this subject has received as reflected in the several different sets of guidelines for infant feeding by HIV infected mothers issued by the World Health Organization and a debate by leading scientists on

whether HIV infected mothers should breastfeed their infants in resource limited and in resource rich settings A comprehensive overview of the current state of implementing the new evidence for prevention of breastfeeding transmission of HIV all over the world is also presented Essential reading for the many disciplines of scientists and clinicians working on HIV AIDS and other retroviruses pediatricians obstetricians gynecologists as well as all health care professionals interested in expanding their understanding on the subject

The Role of Physical and Biological Gut Barriers in Modulating Crosstalk between the Microbiota and the Immune System Marika Falcone, Federica Facciotti, Julien Diana, 2024-07-29 The intestine has several means for maintaining immune homeostasis and for avoiding inflammation despite massive antigenic stimulation by food components and by commensal bacteria residing in the gut mucosa These mechanisms include physical and biological barriers such as i the intestinal epithelial barrier IEB ii the gut vascular barrier GVB and iii the mucus layer In particular the mucus layer does not simply act as a diffusion barrier but has important dynamic functions that regulate the type of commensal bacteria residing in the inner mucus layer enabling the passage of food and bacterial products into the gut tissue and systemic circulation Importantly the mucosal layer also has key immune regulatory functions A healthy mucus structure is fundamental for promoting the presence of beneficial commensal bacteria such as the short chain fatty acids SCFA producing bacteria which are known to promote immune tolerance Moreover the mucus layer contains anti microbial peptides AMPs and mucins that have key immune modulatory functions The integrated response of these combined defense systems is fundamental for containing microbes and their products within the intestine for avoiding their systemic spread and for suppressing their capacity to activate systemic immune and autoimmune responses
