Trans Boundary Protected Areas The Viability Of Regional Conservation Strategies:

Transboundary Protected Areas Yale University, 2003-05-21 Top researchers share their expertise on conservation and sustainability in areas that extend across national borders This informative and insightful book examines strategies being used by governments and NGOs to protect wild areas that cross national borders and cultural linguistic and socioeconomic boundaries In addition to presenting case studies from five continents Transboundary Protected Areas The Viability of Regional Conservation Strategies provides several theoretical overviews that suggest viable approaches to conserving biodiversity in these difficult to protect areas From the editors Historically the borders of protected areas have been defined by convenient social political or proprietary boundaries rather than by ecological boundaries Today many scientists and practitioners are in agreement that the world s biodiversity and other natural resources can best be conserved on an ecosystem or regional scale which may or may not be consistent with political boundaries Efforts to protect land on an ecosystem scale have led to the creation of numerous transboundary protected areas also referred to as international peace parks or transfrontier conservation areas These areas which often cross linguistic socioeconomic and cultural boundaries as well as national borders represent regional conservation at its most complex While many scientists and practitioners promote eco regional approaches to conservation many also advocate pursuing conservation goals on local or community scales Conservationists therefore endeavor to achieve a seemingly incongruous mandate to pursue top down regional goals using bottom up local approaches Transboundary Protected Areas The Viability of Regional Conservation Strategies addresses the vital questions associated with this mandate Is it reasonable and realistic to approach regional conservation this way What strategies have been employed to achieve these goals and how successful have they been Who benefits from transboundary conservation and what are the costs Reflecting the information delivered at the 2001 conference of the Yale chapter of the International Society of Tropical Foresters ISTF this book provides you with the best answers available at this time The contributors include social and natural scientists resource managers policymakers and community leaders Transboundary Protected Areas The Viability of Regional Conservation Strategies brings them together for an interdisciplinary exploration of these questions and other critical issues related to conservation in and around transboundary protected areas Specific cases that are thoughtfully examined in Transboundary Protected Areas The Viability of Regional Conservation Strategies include the public reaction to the Yellowstone to Yukon Y2Y Conservation Initiative the ways in which the establishment of southern Africa s existing and proposed Transfrontier Conservation Areas TFCAs can help conserve biodiversity aid socioeconomic development and promote international peace development and conservation efforts in the Maloti Drakensberg mountains of southern Africa which straddle the borderlands between South Africa and Lesotho the cultural aspects of protected area management in Venezuela and Guyana the impact of transfrontier collaboration as evidenced by the International Gorilla Conservation Programme IGCP in the Virunga Bwindi region of Africa Uganda Rwanda and the Democratic Republic of

Congo how the Nepalese have addressed the problems of poaching commercial logging illegal harvesting and smuggling of forest products and illegal trade of wildlife and wildlife products in the eastern Himalayas by implementing a transboundary biodiversity conservation initiative Helpful maps tables and figures make geographical regions and conservation information easy to assimilate

Conservation Across Borders Charles C. Chester, 2012-02-13 Conservationists have long been aware that political boundaries rarely coincide with natural boundaries From the establishment of early peace parks to the designation of continental migratory pathways a wide range of transborder mechanisms to protect biodiversity have been established by conservationists in both the public and private sectors Conservation Across Borders presents a broad overview of the history of transboundary conservation efforts and an accessible introduction to current issues surrounding the subject Through detailed examinations of two initiatives the International Sonoran Desert Alliance ISDA and the Yellowstone to Yukon Initiative Y2Y the book helps readers understand the benefits and challenges of landscape scale protection In addition to discussing general concepts and the specific experience of ISDA and Y2Y the author considers the emerging concept of conservation effectiveness and offers a comparative analysis of the two projects The book ends with a discussion of the complex relationships among civil society governments and international borders By considering the history goals successes and failures of two divergent initiatives the book offers important insights into the field of transborder conservation along with valuable lessons for those studying or working in the field

Ensuring Greater Yellowstone's Future Susan Gail Clark, 2008-10-01 Drawing on extensive conservation experience in the greater Yellowstone region Susan G Clark outlines the leadership and policy issues associated with managing greater Yellowstone s natural resources and assesses the successes and failures of those who have worked there toward sustainability over the past 40 years

Governance, Natural Resources and Post-Conflict Peacebuilding Carl Bruch, Carroll Muffett, Sandra Nichols, 2016-04-07 When the guns are silenced those who have survived armed conflict need food water shelter the means to earn a living and the promise of safety and a return to civil order Meeting these needs while sustaining peace requires more than simply having governmental structures in place it requires good governance Natural resources are essential to sustaining people and peace in post conflict countries but governance failures often jeopardize such efforts This book examines the theory practice and often surprising realities of post conflict governance natural resource management and peacebuilding in fifty conflict affected countries and territories It includes thirty nine chapters written by more than seventy researchers diplomats military personnel and practitioners from governmental intergovernmental and nongovernmental organizations The book highlights the mutually reinforcing relationship between natural resource management and good governance Natural resource management is crucial to rebuilding governance and the rule of law combating corruption improving transparency and accountability engaging disenfranchised populations and building confidence after conflict At the same time good governance is essential for ensuring that natural resource management can meet immediate needs for post conflict stability

and development while simultaneously laying the foundation for a sustainable peace Drawing on analyses of the close relationship between governance and natural resource management the book explores lessons from past conflicts and ongoing reconstruction efforts illustrates how those lessons may be applied to the formulation and implementation of more effective governance initiatives and presents an emerging theoretical and practical framework for policy makers researchers practitioners and students Governance Natural Resources and Post Conflict Peacebuilding is part of a global initiative to identify and analyze lessons in post conflict peacebuilding and natural resource management The project has generated six books of case studies and analyses with contributions from practitioners policy makers and researchers Other books in this series address high value resources land water livelihoods and assessing and restoring natural resources *The Habitats Directive in its EU Environmental Law Context* Charles-Hubert Born,An Cliquet,Hendrik Schoukens,Delphine Misonne,Geert Van Hoorick,2014-11-27 This book analyses the Habitats Directive one of the most prominent piece of EU environmental legislation of the past decades Seen by some as the cornerstone of Europe s nature conservation policy among other measures the Directive established the so called Natura 2000 ecological network which covers more than 18% of the surface of the EU However despite the fact the Directive was adopted over twenty years ago only 17% of the protected habitats and species in Europe are being adequately protected while 10 60 % of animal species remain under threat In light of the limited success and the contested nature of the Habitats Directive so far this book examines the successes and failures of the Habitats Directive from a legal and political angle The book brings together international experts to consider the application implementation and future of the Habitats Directive in order to assess whether the Habitats Directive is resilient enough to tackle biodiversity loss in the twenty first century Particular emphasis is put on the legal regime attached to the Natura 2000 network and its possible impact on land development and the relationship between the Habitats Directive and other topics including liability for ecological damage and transboundary nature conservation *Plantations and Protected Areas in Sustainable Forestry* William C. Price,Naureen Rana,Alaric Sample,2024-11-01 Understand the social economic and environmental impacts of the development of forest plantationsand the conservation involved Controversy surrounds the question of how to best protect forests of high conservation value while meeting the growing demands for wood and wood fiber based products Plantations and Protected Areas in Sustainable Forestry presents the views of a diverse group of conservationists and natural resource professionals who examine important social and economic as well as ecological aspects of the debate The goal of sustainable forest management is kept at the forefront of the discussions while alternative strategies to meet economic and social needs are explored in light of the need to conserve biological diversity and protect other important ecological services and environmental values in key forest areas For developed nations there is an ethical responsibility to consider sensible development as well as environmental conservation Plantations and Protected Areas in Sustainable Forestry discusses many of the prominent issues that are raised when considering intensively managed forests

plantations and or strict protection of high conservation value forests protected areas in the United States and elsewhere These issues include the role of plantations and their management forest management certification to ensure sustainability job creation from plantations the effects of intensive forest management on society and the environment and the protection of biodiversity This book provides a solid foundation on which to form a consensus that addresses the needs of economics and society as well as forest conservation Topics in Plantations and Protected Areas in Sustainable Forestry include the future of forest plantations forest management certification community benefits derived from intensively managed industrial roundwood plantations the extent to which intensive forest management practices on plantations prevent degradation of natural forests positive and negative impacts of plantations on environmental and social values alternative approaches for investment in wood production global policy perspectives on intensive forest production global strategies for biodiversity conservation Plantations and Protected Areas in Sustainable Forestry provides a diversity of perspectives on one of today's most important developments in international forest policy and international trade in the forest sector It is intended to contribute to better informed decision making and is an important book for policymakers forest resource management professionals and business leaders working to develop practical and effective strategies for sustainable forest management

Collaboration for Sustainability and Innovation: A Role For Sustainability Driven by the Global South? Diego A. Vazquez-Brust, Joseph Sarkis, James J. Cordeiro, 2013-11-20 A number of arguments are made by an international group of authors in this though provoking book about an understudied and socially important context A future in which financial wealth transfers across the North South divide from richer to poorer countries is far from sufficient for the relief of poverty and the pursuit of sustainability Caution must be taken when growth is achieved through the liquidation of the natural wealth of poorer nations in order to maintain a global economic status quo Neither poverty reduction nor sustainability will ultimately be achieved The financial collapse and social upheaval that might result will make the most recent economic downturn look trivial by comparison What is more urgently needed instead as argued in this book is collaboration for sustainability and innovation in the global South especially building on models originally developed in the South that are transferable to the North In pursuit of a sustainable and more equitable future the book examines such topics as Cross Border Innovation in South North Fair Trade Supply Chains Potential Pollution Prevention Programs in Bangladesh Digital Literacy and Social Inclusion in the South through Collective Storytelling and Eco innovation at the Bottom of the Pyramid Many of these stories and have not been told and need greater visibility The book contributes in a meaningful way to the discussion of how innovation and sustainability science can benefit both sides in South North innovation collaborations It provides useful introduction to the topics as well as valuable critiques and best practices This back and forth flow of ideas and innovation is itself new and promising in the modern pursuit of a fair and sustainable future for all regions of our planet

Large-Scale Conservation in the Common Interest Susan G. Clark, Aaron M. Hohl, Catherine H. Picard, Elizabeth

Thomas,2014-09-03 Many people working toward sustainability recognize the important role of conservation but are inadequately prepared to deal with the large spatial temporal and complexity scales that are involved in large scale conservation efforts Problems in large scale conservation require navigating an intermixture of geophysical biological and political dimensions Coming to grips with these many natural and human forces and factors at large scales much less the myriad details in any single case is challenging in the extreme and becomes more critical with each day that passes Large scale conservation poses many complex challenges that single disciplines approaches or methods cannot fully address alone Interdisciplinarity can significantly strengthen large scale conservation efforts Throughout Large Scale Conservation in the Common Interest the editors and authors argue that a more holistic and genuinely interdisciplinary approach is required to solve the complex and growing challenges associated with large scale conservation The chapters within offer such an approach and define key terms bring challenges to light and employ case studies to offer concrete practical and strategic recommendations to help those who are engaged in the interactive tasks of promoting sustainability and human dignity This book is intended for a broad audience including students and professors new to the field of large scale conservation experienced field based practitioners in science and management and decision and policy makers who set specific and strategic direction for large landscapes Professors can use this book to introduce students to the challenges of successful large scale conservation design and implementation and to teach interdisciplinarity as a framework concept and tool Professionals will find this book offers a new way of using science management and policy to make decisions Finally this volume can be used as a guide to set up workshops seminars or projects involving diverse people and perspectives Peace Parks Saleem Hassan Ali,2007 Peace Parks examines ways in which environmental cooperation in multijurisdictional conservation areas may help resolve political and territorial conflicts Its analysis and case studies of transboundary peace parks focus on how sharing of physical space and management responsibilities can build and sustain peace among countries It examines roles played by governments military civil society scientists and conservationists and their effects on both ecological management and potential for peace building in these areas After an historical and theoretical overview that explores economic political and social theories that support peace parks concept and discussion of bioregional management for science and economic development the book presents case studies of existing parks and proposals for future parks Publisher s description **Illegal Logging in the Tropics** Ramsay M Ravenel,Ilmi M E Granoff,Carrie A Magee,2005-01-18 Examine why illegal logging is so pervasiveand how this problem can be addressed In March 2002 the Yale chapter of the International Society of Tropical Foresters brought together social and natural scientists resource managers policymakers community leaders and other interested parties to share experiences strategies succe
