Routledge Library Editions: Philosophy of Time Various Authors, 2021-03-05 Reissuing five works originally published between 1937 and 1991 this collection contains books addressing the subject of time from a mostly philosophic point of view but also of interest to those in the science and mathematics worlds These texts are brought back into print in this small set of works addressing how we think about time the history of the philosophy of time the measurement of time theories of relativity and discussions of the wider thinking about time and space among other aspects One volume is a thorough bibliography collating references on the subject of time across many disciplines **Physico-chemical Aspects of Textile**

Coloration Stephen M. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material The

development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration

Solar Receivers for Thermal Power Generation Amos Madhlopa, 2022-08-13 Solar Receivers for Thermal Power Generation Fundamentals and Advanced Concepts looks at different Concentrated Solar Power CSP systems their varying components and the modeling and optimization of solar receivers The book combines the detailed theory of receivers all physical concepts in the process of converting solar radiation into electricity in CSP systems and the main components of CSP systems including solar concentrators thermal receivers and power blocks Main properties and working principles are addressed along with the principles of solar resources and energy output of CSP systems and solar radiation By covering different types and designs of solar receivers heat transfer fluids operating temperatures and different techniques used in modeling and optimizing solar receivers this book is targeted at academics engaged in sustainable energy engineering research and students specializing in power plant solarization Features methods of modeling the thermal performance of different solar receivers Provides step by step linchpins to advanced theory and practice Includes global case studies surrounding progress in the development of solar receivers

Time: A Bibliographic Guide Samuel L. Macey, 2018-10-10 Originally published in 1991 A multidisciplinary guide in the form of a bibliography of selected time related books and articles divided into 25 existing academic disciplines and about 100 subdisciplines which have a wide application to time studies
