of operation of electromagnetic waveguides and transmission lines The approach is divided between mathematical descriptions of basic behaviors and treatment of specific types of waveguide structures Classical distributed network transmission lines their basic properties their connection to lumped element networks and the distortion of pulses are discussed followed by a full field analysis of waveguide modes Modes of specific kinds of waveguides traditional hollow metallic waveguides dielectric including optical waveguides etc are discussed Problems of excitation and scattering of waveguide modes are addressed followed by discussion of real systems and performance Transmission Lines and Waveguides Mr. Rohit Manglik, 2024-03-15 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels Module 10-Introduction to Wave Propagation, Transmission Lines, and Antennas , **Metamaterial**

Surface Plasmon-Based Transmission Lines and Antennas Amin Kianinejad, 2018-03-30 This thesis proposes a reliable and repeatable method for implementing Spoof Surface Plasmon SSP modes in the design of various circuit components It also presents the first equivalent circuit model for plasmonic structures which serves as an insightful guide to designing SSP based circuits Today electronic circuits and systems are developing rapidly and becoming an indispensable part of our daily life however the issue of compactness in integrated circuits remains a formidable challenge Recently the Spoof Surface Plasmon SSP modes have been proposed as a novel platform for highly compact electronic circuits Despite extensive research efforts in this area there is still an urgent need for a systematic design method for plasmonic circuits In this thesis different SSP based transmission lines antenna feeding networks and antennas are designed and experimentally evaluated With their high field confinement the SSPs do not suffer from the compactness limitations of traditional circuits and are capable of providing an alternative platform for the future generation of electronic circuits and electromagnetic systems
