sources found in economic history social history international relations and migration in world history While Li maintains the first group of Chinese were prisoners brought by the Dutch from Southeast Asia in the seventeenth century the vast majority of early Chinese in Africa were free immigrants and contract laborers that established key communities and organizations It is these early Chinese which laid foundations for and provide important context in interpreting the recent flow of Chinese migrants and capital into various parts of Africa The book should be of value to African and world historians sociologists anthropologists and students of African and Asian studies

Osayimwese,2025-09-23 A groundbreaking history of Africa's looted architectural heritage and a bold proposal for the repatriation of the continent's stolen cultural artifacts Between the nineteenth century and today colonial officials collectors and anthropologists dismembered African buildings and dispersed their parts to museums in Europe and the United States Most of these artifacts were cataloged as ornamental art objects which erased their intended functions and the removal of these objects often had catastrophic consequences for the original structures Africa's Buildings traces the history of the collection and distribution of African architectural fragments documenting the brutality of the colonial regimes that looted Africa's buildings and addressing the ethical questions surrounding the display of these objects Itohan Osayimwese ranges across the whole of Africa from Egypt in the north to Zimbabwe in the south and spanning the western central and eastern regions of the continent She describes how collectors employed violent means to remove elements such as columns and door panels from buildings and how these methods differentiated architectural collecting from conventional collecting She shows how Western collectors mischaracterized building components as ornament erasing their architectural character and concealing the evidence of their theft Osayimwese discusses how the very act of displacing building parts like floor tiles and woven screen walls has resulted in a loss of knowledge about their original function and argues that because of these removals scholars have yet to fully grasp the variety and character of African architecture Richly illustrated Africa's Buildings uncovers the vast scale of cultural displacement perpetrated by the West and proposes a new role for museums in this history one in which they champion the repatriation of Africa's architectural heritage and restitution for African communities
