Visual Mathematics and Cyberlearning Dragana Martinovic,Viktor Freiman,Zekeriya Karadag,2012-12-24 This first book in the series will describe the Net Generation as visual learners who thrive when surrounded with new technologies and whose needs can be met with the technological innovations These new learners seek novel ways of studying such as collaborating with peers multitasking as well as use of multimedia the Internet and other Information and Communication Technologies Here we present mathematics as a contemporary subject that is engaging exciting and enlightening in new ways For example in the distributed environment of cyber space mathematics learners play games watch presentations on YouTube create Java applets of mathematics simulations and exchange thoughts over the Instant Messaging tool How should mathematics education resonate with these learners and technological novelties that excite them

Handbook of Digital Resources in Mathematics Education Birgit Pepin,Ghislaine Gueudet,Jeffrey Choppin,2024-06-21 This handbook presents the state of the art scholarship on theoretical frames mathematical content learning environments pedagogic practices teacher professional learning and policy issues related to the development and use of digital resources in mathematics education With the advent of more and more open access digital resources teachers choose from the web what they see fit for their classroom students choose in the moment what they need for their projects and learning paths However educators and students often find it difficult to choose from the abundance of materials on offer as they are uncertain about their quality and beneficial use It is clear that at a time of bouleversement of the teaching learning processes it is crucial to understand the quality and the potentially transformative aspects of digital resources This book provides comprehensive analyses of and insights into the transformative aspects of digital resources

Digital Games and Mathematics Learning Tom Lowrie,Robyn Jorgensen (Zevenbergen),2015-10-05 Digital games offer enormous potential for learning and engagement in mathematics ideas and processes This volume offers multidisciplinary perspectives of educators cognitive scientists psychologists and sociologists on how digital games influence the social activities and mathematical ideas of learners gamers Contributing authors identify opportunities for broadening current understandings of how mathematical ideas are fostered and embedded within digital

game environments In particular the volume advocates for new and different ways of thinking about mathematics in our digital age proposing that these mathematical ideas and numeracy practices are distinct from new literacies or multiliteracies The authors acknowledge that the promise of digital games has not always been realised fulfilled There is emerging and considerable evidence to suggest that traditional discipline boundaries restrict opportunities for mathematical learning Throughout the book what constitutes mathematics learnings and pedagogy is contested Multidisciplinary viewpoints are used to describe and understand the potential of digital games for learning mathematics and identify current tensions within the field Mathematics learning is defined as being about problem solving engagement in mathematical ideas and processes and social engagement The artefact which is the game shapes the ways in which the gamers engage with the social activity of gaming In parallel the book as a textual artefact will be supported by Springer's online platform allowing for video and digital communication including links to relevant websites to be used as supplementary material and establish a dynamic communication space

Mathematical Work in Educational Context Alain Kuzniak, Elizabeth Montoya-Delgadillo, Philippe R. Richard, 2022-03-31 This book is a friendly and complete introduction to one of the most comprehensive contemporary theories of mathematics teaching and learning By focusing on mathematical work performed by students and teachers during mathematics session the theory of Mathematical Workings Spaces MWS has opened up new perspectives and avenues on mathematics education and mathematical thinking In particular it enables the identification of students knowledge production processes and helps teachers to shape them The first part of the book explores the heart of the theory and aims to further describe and understand epistemological and cognitive aspects of mathematical work The second part develops the different MWS dedicated to observing how this work depends on the expectations of educational systems how it is formed and taught and how individuals appropriate it In the last part some applications and perspectives are discussed regarding topics of major importance today in mathematics education which relate to technological and digital tools teacher training and modeling activities In line with the spirit of the theory the book was written to reflect the conceptual unity at the heart of the theory of MWS and at the same time to show the freedom and diversity of approaches given space therein Written for researchers and professionals in mathematics education it offers plenty of concrete examples from different educational systems around the world to illustrate the theoretical concepts and show the applicability of the theory to practice and research

Creativity and Technology in Mathematics Education Viktor Freiman, Janet Lynne Tassell, 2018-09-03 This volume provides new insights on creativity while focusing on innovative methodological approaches in research and practice of integrating technological tools and environments in mathematics teaching and learning This work is being built on the discussions at the mini symposium on Creativity and Technology at the International Conference on Mathematical Creativity and Giftedness ICMCG in Denver USA 2014 and other contributions to the topic The book emphasizes a diversity of views a variety of contexts angles and cultures of thought as well as mathematical and educational

practices The authors of each chapter explore the potential of technology to foster creative and divergent mathematical thinking problem solving and problem posing creative use of dynamic multimodal and interactive software by teachers and learners as well as other digital media and tools while widening and enriching transdisciplinary and interdisciplinary connections in mathematics classroom Along with ground breaking innovative approaches the book aims to provide researchers and practitioners with new paths for diversification of opportunities for all students to become more creative and innovative mathematics learners A framework for dynamic learning conditions of leveraging mathematical creativity with technology is an outcome of the book as well

Knowledge and Interaction Andrea A. diSessa, Mariana Levin, Nathaniel J.S. Brown, 2015-12-07 Decades of research in the cognitive and learning sciences have led to a growing recognition of the incredibly multi faceted nature of human knowing and learning Up to now this multifaceted nature has been visible mostly in distinct and often competing communities of researchers From a purely scientific perspective siloed science where different traditions refuse to speak with one another or merely ignore one another is unacceptable This ambitious volume attempts to kick start a serious new line of work that merges or properly articulates different traditions with their divergent historical theoretical and methodological commitments that nonetheless both focus on the highly detailed analysis of processes of knowing and learning as they unfold in interactional contexts in real time Knowledge and Interaction puts two traditions in dialogue with one another Knowledge Analysis KA which draws on intellectual roots in developmental psychology and cognitive modeling and focuses on the nature and form of individual knowledge systems and Interaction Analysis IA which has been prominent in approaches that seek to understand and explain learning as a sequence of real time moves by individuals as they interact with interlocutors learning environments and the world around them The volume s four part organization opens up space for both substantive contributions on areas of conceptual and empirical work as well as opportunities for reflection integration and coordination

Learning and Collaboration Technologies: Games and Virtual Environments for Learning Panayiotis Zaphiris, Andri Ioannou, 2021-07-03 This two volume set LNCS 12784 and 12785 constitutes the refereed proceedings of the 8th International Conference on Learning and Collaboration Technologies LCT 2021 held as Part of the 23rd International Conference HCI International 2021 which took place in July 2021 Due to COVID 19 pandemic the conference was held virtually The total of 1276 papers and 241 posters included in the 39 HCII 2021 proceedings volumes was carefully reviewed and selected from 5222 submissions The papers of LCT 2021 Part II focus on Games and Gamification in Learning Chatbots in Learning AR VR and Robots in Learning

Mind and the Cosmic Order Charles Pinter, 2020-11-04 The topic of this book is the relationship between mind and the physical world From once being an esoteric question of philosophy this subject has become a central topic in the foundations of quantum physics The book traces this story back to Descartes through Kant to the beginnings of 20th Century physics where it becomes clear that the mind world relationship is not a speculative question but has a direct impact on the understanding of physical phenomena

The book's argument begins with the British empiricists who raised our awareness of the fact that we have no direct contact with physical reality but it is the mind that constructs the form and features of objects. It is shown that modern cognitive science brings this insight a step further by suggesting that shape and structure are not internal to objects but arise in the observer. The author goes yet further by arguing that the meaningful connectedness between things, the hierarchical organization of all we perceive is the result of the Gestalt nature of perception and thought and exists only as a property of mind. These insights give the first glimmerings of a new way of seeing the cosmos not as a mineral wasteland but a place inhabited by creatures.

Social Media in the Changing Mathematics Classroom Johann Engelbrecht, Greg Oates, Marcelo de Carvalho Borba, 2025-04-16 This edited volume gathers contributions from international scholars focusing on social media's role and impact on mathematics education. Social media's integration into pedagogical strategies from social networking sites to video sharing platforms offers the opportunity to enhance learning by fostering connectivity and engagement among students, ultimately improving mathematical understanding in educational settings. This text aims to provide guidance on the facilitation of peer learning and collaboration as well as highlighting the necessary shift in traditional methods to include cyber assistance in the learning process. The book discusses how social media aligns with social constructivist theories of learning, its consistency with the process of developing students into independent learners, and provides means to ensuring educators remain relevant and connected to students' preferred modes of learning. Challenges and benefits of the use of social media tools in teaching are also detailed. Examining the potential for effective integration of social media in the classroom, this book is a valuable resource for educators, practitioners, and researchers interested in mathematics education.
