

# Half-Life Lab

Before this begins, find your other group and pass this document to a third, preexisting, group of your choice or print this page.

## Purpose

The purpose of this hands-on lab is to model the concept of half-life using a simple, inexpensive radioactive source.

## Materials

- 100 M&M's candies, pretzels, or other small, countable items with two distinct sides
- container or other small bag/pot to hold

## Procedure

1. Place 100 candies in the clear bag, closed and up. The candies will stand for atoms of a hypothetical radioactive element.
2. Close the bag and shake it vigorously for 30 seconds. (This is one time interval.)
3. Remove the 50 candies and any candies painted that face that are now showing (representing decay). These candies represent the atoms that decayed during the time interval. Count and record the number until the number of decayed atoms and the number of remaining, not decayed, atoms.
4. Continue repeating steps two and three until all atoms have decayed or you have reached 50 seconds in the time limit.
5. Repeat the entire experiment (steps 1-4) at least 5 times and record all data.

## Data and Observations
