Visual Complexity and Intelligent Computer Graphics Techniques Enhancements Dimitri Plemenos, Georgios Miaoulis, 2009-07-09 In this book three main notions will be used in the editors search of improvements in various areas of computer graphics Artificial Intelligence Viewpoint Complexity and Human Intelligence Several Artificial Intelligence techniques are used in presented intelligent scene modelers mainly declarative ones Among them the mostly used techniques are Expert systems Constraint Satisfaction Problem resolution and Machine learning The notion of viewpoint complexity that is complexity of a scene seen from a given viewpoint will be used in improvement proposals for a lot of computer graphics problems like scene understanding virtual world exploration image based modeling and rendering ray tracing and radiosity Very often viewpoint complexity is used in conjunction with Artificial Intelligence techniques like Heuristic search and Problem resolution The notions of artificial Intelligence and Viewpoint Complexity may help to automatically resolve a big number of computer graphics problems However there are special situations where is required to find a particular solution for each situation In such a case human intelligence has to replace or to be combined with artificial intelligence Such cases and proposed solutions are also presented in this book Hybrid Self-Organizing Modeling Systems Godfrey C Onwubolu, 2009-06-15 The Group Method of Data Handling GMDH is a typical inductive modeling method that is built on principles of self organization for modeling complex systems This book clearly presents hybrids of some computational intelligence techniques and GMDH approach *Ontology-Based Multi-Agent Systems* Maja Hadzic, Elizabeth J. Chang, Pornpit Wongthongtham, 2009-06-25 During the last two decades the idea of Semantic Web has received a great deal of attention An extensive body of knowledge has emerged to describe technologies that seek to help us create and use aspects of the Semantic Web Ontology and agent based technologies are understood to be the two important technologies here A large number of articles and a number of books exist to describe the use individually of the two technologies and the design of systems that use each of these technologies individually but little focus has been given on how one can sign systems that carryout integrated use of the two different technologies In this book we describe ontology and agent based systems individually and highlight advantages of integration of the two different and complementary technologies We also present a methodology that will guide us in the design of the tegrated ontology based multi agent systems and illustrate this methodology on two use cases from the health and software engineering domain This book is organized as follows Chapter I Current issues and the need for ontologies and agents describes existing problems associated with uncontrollable information overload and explains how ontologies and agent based systems can help address these sues Chapter II Introduction to multi agent systems defines agents and their main characteristics and features including mobility communications and collaboration between different agents It also presents different types of agents on the basis of

Kureichik,Sergey P. Malioukov,Vladimir V. Kureichik,Alexander S. Malioukov,2009-07-21 New perspective technologies of genetic search and evolution simulation represent the kernel of this book The authors wanted to show how these technologies are used for practical problems solution This monograph is devoted to specialists of CAD intellectual information technologies in science biology economics sociology and others It may be used by post graduate students and students of specialties connected to the systems theory and system analysis methods information science optimization methods operations investigation and solution making **Artificial Intelligence Abstracts** ,1991 **CAD/CAM Abstracts** ,1992 **Computers, Control & Information Theory** ,1984 *Biomedical Technology & Human Factors Engineering* ,1984 *Documentation Abstracts* ,1992 **Index to Theses with Abstracts Accepted for Higher Degrees by the Universities of Great Britain and Ireland and the Council for National Academic Awards** ,2008 Theses on any subject submitted by the academic libraries in the UK and Ireland **International Aerospace Abstracts** ,1990 **Research Directions in Robotics** Center for Robotics and Integrated Manufacturing,1962 Proceedings of the ... Plemenos,Georgios Miaoulis,2009-10-13 The purpose of this volume is to present current work of the Intelligent Computer Graphics community a community growing up year after year This volume is a kind of continuation of the previously published Springer volume Artificial Intelligence Techniques for Computer Graphics Nowadays intelligent techniques are more and more used in Computer Graphics in order not only to optimise the processing time but also to find more accurate solutions for a lot of Computer Graphics problems than with traditional methods What are intelligent techniques for Computer Graphics Mainly they are techniques based on Artificial Intelligence So problem resolution especially constraint satisfaction techniques as well as evolutionary techniques are used in Declarative scene Modelling heuristic search techniques as well as strategy games techniques are currently used in scene understanding and in virtual world exploration multi agent techniques and evolutionary algorithms are used in behavioural animation and so on However even if in most cases the used intelligent techniques are due to Artificial intelligence sometimes simple human intelligence can find interesting solutions in cases where traditional Computer Graphics techniques even combined with Artificial Intelligence ones cannot propose any satisfactory solution A good example of such a case is the one of scene understanding in the case where several parts of the scene are impossible to access
