Visual Search And Attention A Special Issue Of Visual Cognition:

Visual Search and Attention Hermann J. Müller, Joseph Krummenacher, 2006 This special issue of Visual Cognition collects some 30 articles on Visual Search and Attention by leading experts from a variety of disciplines including experimental psychology neuropsychology neurophysiology and computational modelling The articles are updated versions of papers presented at the 2003 Munich Visual Search Symposium The symposium's goal carried forward in this collection was to foster an interdisciplinary dialogue in order to identify important shared issues and consider ways of how these can be resolved using convergent methodologies Reflecting the symposium discussions the Special Issue is divided into four thematic sections preattentive processing and role of memory in visual search brain mechanisms and computational modelling of visual search Visual Selective Attention Claus Bundesen, Hitomi Shibuya, 1995 This special issue of Visual Cognition features empirical and theoretical contributions by leading research scholars in the field The volume begins with a general introduction and an authoritative review of work on spatial attention in the flankers task Next a series of empirical articles reports important new findings on visual selection by spatial location A second section contrasts by presenting recent empirical findings on visual selection by other criteria Finally four articles present major theoretical statements on aspects of visual attention As a whole the issue forms a substantial contribution to the literature on visual selective attention

Attentional Capture Bradley S. Gibson, Charles Folk, 2008 The notion that certain mental or physical events can capture attention has been one of the most enduring topics in the study of attention owing to the importance of understanding how goal directed and stimulus driven processes interact in perception and cognition Despite the clear theoretical and applied importance of attentional capture a broad survey of this field suggests that the term capture means different things to different people In some cases it refers to covert shifts of spatial attention in others involuntary saccades and in still others general disruption of processing by irrelevant stimuli The properties that elicit capture can also range from abruptly onset or moving lights to discontinuities in textures to unexpected tones to emotionally valenced words or pictures to directional signs and symbols Attentional capture has been explored in both the spatial and temporal domains as well as the visual and auditory modalities There are also a number of different theoretical perspectives on the mechanisms underlying capture both functional and neurophysiological and the level of cognitive control over capture This special issue provides a sampling of the diversity of approaches domains and theoretical perspectives that currently exist in the study of attentional capture Together these contributions should help evaluate the degree to which attentional capture represents a unitary construct that reflects fundamental theoretical principles and mechanisms of the mind *Dynamic Cognitive Processes* Nobuo Ohta, Colin M. MacLeod, Bob Uttil, 2006-06-09 The conference from which this book derives took place in Tsukuba Japan in March 2004 The fifth in a continuing series of conferences this one was organized to examine dynamic processes in lower order cognition from perception to attention to memory considering both the behavioral and the neural levels We were fortunate to attract a

terrific group of contributors representing five countries which resulted in an exciting conference and as the reader will quickly discover an excellent set of chapters In Chapter 1 we will provide a sketchy road map to these chapters elucidating some of the themes that emerged at the conference The conference itself was wonderful We very much enjoyed the variety of viewpoints and issues that we all had the opportunity to grapple with There were lively and spirited exchanges and many chances to talk to each other about exciting new research precisely what a good conference should promote We hope that the readers of this book will have the same experience moving from careful experimental designs in the cognitive laboratory to neural mechanisms measured by new technologies from the laboratory to the emergency room from perceptual learning to changes in memory over decades all the while squarely focusing on how best to explain cognition not simply to measure it Ultimately the goal of science is of course explanation We also hope that the reader will come away absolutely convinced that cognition is a thoroughly dynamic interactive system

The Oxford Handbook of Attention Kia Nobre, Sabine Kastner, 2018 During the last three decades there have been enormous advances in our understanding of the neural mechanisms of selective attention at the network as well as the cellular level The Oxford Handbook of Attention brings together the different research areas that constitute contemporary attention research into one comprehensive and authoritative volume In 40 chapters it covers the most important aspects of attention research from the areas of cognitive psychology neuropsychology human and animal neuroscience computational modelling and philosophy The book is divided into 4 main sections Following an introduction from Michael Posner the book starts by looking at theoretical models of attention The next two sections are dedicated to spatial attention and non spatial attention respectively Within section 4 the authors consider the interactions between attention and other psychological domains The last two sections focus on attention related disorders and finally on computational models of attention Aimed at both scholars and students the Oxford Handbook of Attention provides a concise and state of the art review of the current literature in this field

Attention in Cognitive Systems Lucas Paletta, John K. Tsotsos, 2009-03-26 Attention has represented a core scientific topic in the design of AI enabled systems in the last few decades Today in the ongoing debate design and computational modeling of artificial cognitive systems attention has gained a central position as a focus of research For instance attentional methods are considered in investigating the interfacing of sensory and cognitive information processing for the organization of behaviors and for the understanding of individual and social cognition in infant development

While visual cognition plays a central role in human perception findings from neuroscience and experimental psychology have provided strong evidence about the perception action nature of cognition The embodied nature of sensorimotor intelligence requires a continuous and focused interplay between the control of motor activities and the interpretation of feedback from perceptual modalities Decision making about the selection of information from the incoming sensory stream in tune with contextual processing on a current task and an agent's global

objectives becomes a further challenging issue in attentional control Attention must operate at interfaces between a bottom up driven world interpretation and top down driven information selection thus acting at the core of artificial cognitive systems These insights have already induced changes in AI related disciplines such as the design of behavior based robot control and the computational modeling of animats Today the development of enabling technologies such as autonomous robotic systems miniaturized mobile even wearable sensors and ambient intelligence systems involves the real time analysis of enormous quantities of data These data have to be processed in an intelligent way to provide on time delivery of the required relevant information Knowledge has to be applied about what needs to be attended to and when and what to do in a meaningful sequence in correspondence with visual feedback The Effect of Perceptual Information on the Activation of Scene Gist Monica Sofia Castelhana, 2005 **From Perception to Consciousness** Jeremy Wolfe, Lynn Robertson, 2012-05-24 This volume includes seminal articles published throughout Anne Treisman's scientific career which are accompanied by chapters from key figures in the field today These demonstrate the breadth and depth of her influence on research and theory from psychology to vision and auditory sciences **Eye Tracking Research and Applications Symposium** Andrew T. Duchowski, 2002 **Cognitive Neuroscience Perspective on Synaesthesia** J. B. Mattingley, J. Fletcher-Flinn, Gus M. Haberman, 2006 This volume marks the first comprehensive collection of reports from research projects in cognitive psychology in New Zealand The existence of such a book is a reflection of the remarkable and ongoing growth in cognitive inquiry in this part of the world Although most influential models and theories on cognition have originated in North America and Europe the last two decades have seen an upsurge of cognitive research in the Australasian region Cognition and Language is intended to make accessible and integrate theoretically significant outcomes of cognitive science in New Zealand research centres Our intention was to edit the first volume on the international publishing scene reflecting the depth quality and some of the thematic diversity of cognitive psychology in New Zealand centres It reflects some of the perspectives and approaches that New Zealand scientists take to internationally well recognised cognitive topics It also indicates more unique themes that are investigated reliant on the Australasian context In particular the book is meant to integrate studies in the technical field of perception the interfaces between cognition and language psycholinguistics psychology of communication and cognitive developmental studies three domains that become increasingly salient in New Zealand cognitive science Binding James R. Brockmole, Steven L. Franconeri, 2009 The articles in this special issue of Visual Cognition cover three major types of binding each of which may require a unique solution The binding of features within objects the relational binding among objects and the binding between temporally related events *Proceedings APGV ...*, 2006 **Proceedings 2002 IEEE/RSJ International Conference on Intelligent Robots and Systems**, 2002
