Wittgenstein: Mind and Language R. Egidi, 2013-03-09 Wittgenstein Mind and Language brings together a collection of previously unpublished essays which offer a systematic account of Wittgenstein's philosophy of mind and contribute in an absolutely new and original way to illuminating his later conception of human perceptive emotional and cognitive language from both a theoretical and an historical point of view. The focus is on the fundamental categories of philosophical grammar on the analysis of intentionality of belief and Moore's paradox on certainty and doubt on will memory sensations and emotions as well as on the theory of aspects and private language and the relationship with relativism and psychologism. In the recent literature there are undoubtedly numerous qualified publications dedicated to the themes of philosophical psychology as they emerge from Wittgenstein's Nachla and from his writings on this subject published in the last decade. This book however provides the essential points of reference of Wittgenstein's late treatment of psychological concepts in the context of the general features of his early philosophy of science and language and in the framework of the trends of his time. The book is of special interest to scholars and students philosophers linguists psychologists sociologists cognitive scientists logicians historians of contemporary philosophy and science.

Frege on Language, Logic, and Psychology Eva Picardi, 2022 This collection of papers by Eva Picardi 1948-2017 one of the most influential Italian philosophers of her generation examines the work of Gottlob Frege. Picardi combines theoretical and historical considerations to bring out the significance of his work for contemporary philosophy of language.

Phenomenological Aspects of Wittgenstein's Philosophy Byong-Chul Park, 1998 Wittgenstein's philosophy is a puzzling subject mainly because Wittgenstein himself does not appear to have given a full explicit account of what he means by his phenomenology phenomenological language or phenomenological problems. This book examines the idea of phenomenology throughout the different stages of Wittgenstein's philosophical development. The author argues that Wittgenstein's entire philosophical life was mainly concerned with what is immediately given in one's experience. Early interpretations of the phenomenological elements in Wittgenstein's philosophy usually emphasized the unique nature of his later work.

E.A. Burtt, Historian and Philosopher D. Villemaire, 2013-04-17 Burtt's book *The Metaphysical Foundations of Modern Physical Science* is something of a puzzle within the context of twentieth century intellectual history especially American intellectual history. Burtt's pioneering study of the scientific revolution has proved to be prophetic in its rejection of both scientism and positivism. Published in 1924 Burtt's book continues to be read in educated circles and remains both the rose and the thorn on university reading lists raising skeptical questions about science methods and science knowledge just as it did seventy five years ago. This book examines Burtt's public academic and personal life. From his politics of conscience after World War I on through the Cold War Burtt is shown to be a man of unparalleled integrity whose relentless search for philosophic understanding drove his more quixotic philosophical quests and steered his personal life including its tragic dimension toward simple virtue. The many who have been affected by

The Metaphysical Foundations will be especially interested in this new perspective on the life and thought of its author Those who have not read Burt's books might be inspired to study this unusual American thinker **Defeasible Deontic Logic**

Donald Nute, 2012-12-06 Relevant to philosophy law management and artificial intelligence these papers explore the applicability of nonmonotonic or defeasible logic to normative reasoning The resulting systems purport to solve well known deontic paradoxes and to provide a better treatment than classical deontic logic does of prima facie obligation conditional obligation and priorities of normative principles **Fact, Faith and Fiction in the Development of Science** R.

Hooykaas, 2013-06-29 In this posthumous book the late Professor R Hooykaas 1906 1994 conveys a lifetime of historical thought about modes of scientific advance over the centuries In what variety of ways has the human mind with all its subjectivity and its capacity for self deception but also its piercing gifts of discovery managed to come to terms with the whimsical tricks of nature Central to this erudite penetrating and widely ranging study is Hooykaas's distinction between facts given by nature yet entirely subject to our mode of interpreting them faith broad conceptions like the idea of order of simplicity or of harmony and fictions in the sense of those daring intellectual tools such as theories and hypotheses and models which reflect the scientist's creative imagination Case studies drawn from the history of all branches of science including chemistry and the earth sciences and from Antiquity to the present day serve to widen and to deepen the understanding of every reader whether a historian of science or not with a desire to learn more about the realities of the scientific pursuit **Issues and Images in the Philosophy of Science** D. Ginev, Robert S. Cohen, 2012-12-06 Azarya

Polikarov was born in Sofia on October 9 1921 Through the many stages of politics economy and culture in Bulgaria he maintained his rational humanity and scientific curiosity He has been a splendid teacher and an accomplished critical philosopher exploring the conceptual and historical vicissitudes of physics in modern times and also the science policies that favor or threaten human life in these decades Equally and easily at home both within the Eastern and Central European countries and within the Western world Polikarov is known as a collaborating genial colleague a working scholar not at all a visiting academic tourist He understands the philosophy of science from within in all its developments from the classical beginnings through the great ages of Galilean Newtonian Maxwellian science to the times of the stunning discoveries and imaginative theories of his beloved Einstein and Bohr of the twentieth century Moreover his understanding has come along with a deep knowledge of the scientific topics in themselves Looking at our Appendix listing his principal publications we see that Polikarov's public research career after years of science teaching and popular science writing began in the fifties in Bulgarian Russian and German journals **Holism in Philosophy of Mind and Philosophy of Physics** Michael

Esfeld, 2001-06-30 The topic of this book is a comparison between holism in the philosophy and language and social holism on the one hand and holism about space time and quantum systems on the other hand The main claim is that holism in the humanities and holism in fundamental physics come under the same substantial general conception of holism That is to say

arguments to the effect that the holism of the mental is unscientific or that the mental is separated from the physical owing to holism are not sound The holism of the mental fits into a world view that bases itself on scientific realism The addressees of this book are all those who care about our view of the world and ourselves in the spirit of an argumentative examination of different positions No familiarity with physics is presupposed **Intensionality and Truth** Philip Hugly,C.

Sayward,2012-12-06 Prior's view on intensionality and truth is based on the principle that sentences never name that what sentences say cannot be otherwise signified that a sentence says what it says whatever the type of its occurrence and that sentential quantification is neither eliminable substitutional nor referential The text defends each of these principles

Axiomatic Formal Ontology Uwe Meixner,2013-04-17 Axiomatic Formal Ontology is a fairly comprehensive systematic treatise on general metaphysics The axiomatic method is applied throughout the book Its main theme is the construction of a general non set theoretical theory of intensional entities Other important matters discussed are the metaphysics of modality the nature of actual existence mereology and the taxonomy of entities **History and Philosophy of Constructive Type**

Theory Giovanni Sommaruga,2013-03-09 A comprehensive survey of Martin L f's constructive type theory considerable parts of which have only been presented by Martin L f in lecture form or as part of conference talks Sommaruga surveys the prehistory of type theory and its highly complex development through eight different stages from 1970 to 1995 He also provides a systematic presentation of the latest version of the theory as offered by Martin L f at Leiden University in Fall 1993 This presentation gives a fuller and updated account of the system Earlier brief presentations took no account of the issues related to the type theoretical approach to logic and the foundations of mathematics while here they are accorded an entire part of the book Readership Comprehensive accounts of the history and philosophy of constructive type theory and a considerable amount of related material Readers need a solid background in standard logic and a first basic acquaintance with type theory Collected Papers of Stig Kanger with Essays on his Life and Work Ghita Holmström-Hintikka,Sten

Lindström,R. Sliwinski,2012-12-06 Stig Kanger 1924 1988 made important contributions to logic and formal philosophy Kanger's dissertation Provability in Logic 1957 contained significant results in proof theory as well as the first fully worked out model theoretic interpretation of quantified modal logic It is generally accepted nowadays that Kanger was one of the originators of possible worlds semantics for modal logic Kanger's most original achievements were in the areas of general proof theory the semantics of modal and deontic logic and the logical analysis of the concept of rights He also contributed to action theory preference logic and the theory of measurement This is the first of two volumes dedicated to the work of Stig Kanger The present volume is a complete collection of Kanger's philosophical papers The second volume contains critical essays on Kanger's work as well as biographical essays on Kanger written by colleagues and friends **In the Shadow of**

Descartes G.H. Von Wright,2013-03-09 Descartes made a sharp distinction between matter and mind But he also thought that the two interact with one another Is such interaction possible however without either a materialist reduction of mind to

matter or an idealist phenomenalist reduction of matter to mind These questions overshadow the Western tradition in metaphysics from the time of Descartes to present times The book makes an effort to stay clear of reductivist views of the two Cartesian substances It defends a dualistic psycho physical parallel theory which reconciles freedom of action with determinism in nature Basic problems in perception theory are also discussed with special emphasis on hearing and sound Because of the intrinsic interest of the subject and the author's non technical presentation of it the book should appeal to all readers with a serious interest in philosophy and psychology The Lvov-Warsaw School and Contemporary Philosophy K. Kijania-Placek, Jan Wolenski, 1998-08-31 Contains papers from a November 1995 conference held in Eastern Europe celebrating the centenary of the Lvov Warsaw school of analytic philosophy Papers deal with all directions of research undertaken by Polish analytic philosophers Special attention is paid to logic and comparisons with other philosophical movements particularly with brentanism Contains sections on history and comparisons the ideas of Lesniewski philosophy of language logic and the foundations of mathematics logic and philosophy and the ontology epistemology and philosophy of science No index Annotation copyrighted by Book News Inc Portland OR Naming the Rainbow D. Dedrick, 2013-03-09 Is there a universal biolinguistic disposition for the development of basic colour words This question has been a subject of debate since Brent Berlin and Paul Kay's Basic Color Terms Their Universality and Evolution was published in 1969 Naming the Rainbow is the first extended study of this debate The author describes and criticizes empirically and conceptually unified models of colour naming that relate basic colour terms directly to perceptual and ultimately to physiological facts arguing that this strategy has overlooked the cognitive dimension of colour naming He proposes a psychosemantics for basic colour terms which is sensitive to cultural difference and to the nature and structure of non linguistic experience Audience Contemporary colour naming research is radically interdisciplinary and Naming the Rainbow will be of interest to philosophers psychologists anthropologists and cognitive scientists concerned with biological constraints on cognition and categorization problems inherent in cross cultural and in interdisciplinary science the nature and extent of cultural relativism

Analysis and Synthesis in Mathematics Michael Otte, Marco Panza, 1997 The book discusses the main interpretations of the classical distinction between analysis and synthesis with respect to mathematics In the first part this is discussed from a historical point of view by considering different examples from the history of mathematics In the second part the question is considered from a philosophical point of view and some new interpretations are proposed Finally in the third part one of the editors discusses some common aspects of the different interpretations **I Am You** Daniel Kolak, 2007-11-03 Borders enclose and separate us We assign to them tremendous significance Along them we draw supposedly uncrossable boundaries within which we believe our individual identities begin and end erecting the metaphysical dividing walls that enclose each one of us into numerically identical numerically distinct entities persons Do the borders between us physical psychological neurological causal spatial temporal etc merit the metaphysical significance ordinarily accorded them The central thesis of I

Am You is that our borders do not signify boundaries between persons We are all the same person Variations on this heretical theme have been voiced periodically throughout the ages the Upanishads Averro s Giordano Bruno Josiah Royce Schr dinger Fred Hoyle Freeman Dyson In presenting his arguments the author relies on detailed analyses of recent formal work on personal identity especially that of Derek Parfit Sydney Shoemaker Robert Nozick David Wiggins Daniel C Dennett and Thomas Nagel while incorporating the views of Descartes Leibniz Wittgenstein Schopenhauer Kant Husserl and Brouwer His development of the implied moral theory is inspired by and draws on Rawls Sidgwick Kant and again Parfit The traditional commonsense view that we are each a separate person numerically identical to ourselves over time i e that personal identity is closed under known individuating and identifying borders what the author calls Closed Individualism is shown to be incoherent The demonstration that personal identity is not closed but open points collectively in one of two new directions either there are no continuously existing self identical persons over time in the sense ordinarily understood the sort of view developed by philosophers as diverse as Buddha Hume and most recently Derek Parfit what the author calls Empty Individualism or else you are everyone i e personal identity is not closed under known individuating and identifying borders what the author calls Open Individualism In making his case the author offers a new explanation both of consciousness and of self consciousness constructs a new theory of Self explains psychopathologies e g multiple personality disorder schizophrenia shows Open Individualism to be the best competing explanation of who we are provides the metaphysical foundations for global ethics The book is intended for philosophers and the philosophically inclined physicists mathematicians psychiatrists psychologists linguists computer scientists economists and communication theorists It is accessible to graduate students and advanced undergraduates

Abductive Reasoning Atocha Aliseda, 2006-02-16 Abductive Reasoning Logical Investigations into Discovery and Explanation is a much awaited original contribution to the study of abductive reasoning providing logical foundations and a rich sample of pertinent applications Divided into three parts on the conceptual framework the logical foundations and the applications this monograph takes the reader for a comprehensive and erudite tour through the taxonomy of abductive reasoning via the logical workings of abductive inference ending with applications pertinent to scientific explanation empirical progress pragmatism and belief revision

Dynamic Epistemic Logic Hans van Ditmarsch, Wiebe van der Hoek, Barteld Kooi, 2007-05-06 Dynamic Epistemic Logic is the logic of knowledge change This book provides various logics to support such formal specifications including proof systems Concrete examples and epistemic puzzles enliven the exposition The book also offers exercises with answers It is suitable for graduate courses in logic Many examples exercises and thorough completeness proofs and expressivity results are included A companion web page offers slides for lecturers and exams for further practice

The Dynamics of Thought Peter Gardenfors, 2005-11-10 This book is a selection from the articles that I have written over a period of more than twenty years Since the focus of my research interests has shifted several times during this period it would be difficult to identify a common theme for all the papers in the

volume Following the Swedish tradition I therefore present this as a sm rg sbord of philosophical and cognitive issues that I have worked on To create some order I have organized the sixteen papers into five general sections 1 Decision theory 2 belief revision and nonmonotonic logic 3 induction 4 semantics and pragmatics and 5 cognition and evolution Having said this I still think that there is a common theme to my work over the years The dynamics of thought My academic interests have all the time dealt with aspects of how different kinds of knowledge should be represented and in particular how changes in knowledge will affect thinking Hence the title of the book
