Unruly Complexity Ecology Interpretation Engagement:

Unruly Complexity Peter J. Taylor, 2005-09-15 Unruly Complexity makes a strong case that if research is to be successfully implemented in the public discourse researchers and the public alike must consider the larger web of interactions that influences how scientific knowledge is created and used

Unruly Complexity Peter J. Taylor, 2010-12-15 Ambitiously identifying fresh issues in the study of complex systems Peter J Taylor in a model of interdisciplinary exploration makes these concerns accessible to scholars in the fields of ecology environmental science and science studies Unruly Complexity explores concepts used to deal with complexity in three realms ecology and socio environmental change the collective constitution of knowledge and the interpretations of science as they influence subsequent research For each realm Taylor shows that unruly complexity situations that lack definite boundaries where what goes on outside continually restructures what is inside and where diverse processes come together to produce change should not be suppressed by partitioning complexity into well bounded systems that can be studied or managed from an outside vantage point Using case studies from Australia North America and Africa he encourages readers to be troubled by conventional boundaries especially between science and the interpretation of science and to reflect more self consciously on the conceptual and practical choices researchers make

Seeking Sustainability in an Age of Complexity Graham Harris, 2007-06-14 Seeking Sustainability in an Age of Complexity explains the difficulties of sustainability and why collapse can occur In the last twenty years the theory of complexity has been developed complex systems science CSS speaks to natural systems and particularly to ecological social and economic systems and their interaction Due to the growing concern over the huge changes occurring in the global environment such as climate change deforestation habitat fragmentation and loss of biodiversity Graham Harris sets out what has been learned in an attempt to understand the implications of these changes and suggests ways to move forward This book discusses a number of emerging tools for the management of unruly complexity which facilitate stronger regional dialogues about knowledge and values which will be of interest to ecologists sociologists economists natural resource managers and scientists in State and local governments and those involved in water and landscape management

Epidemiology and the People's Health Nancy Krieger, 2011-03-23 This concise conceptually rich and accessible book is a rallying cry for a return to the study and discussion of epidemiologic theory what it is why it matters how it has changed over time and its implications for improving population health and promoting health equity By tracing its history and contours from ancient societies on through the development of and debates within contemporary epidemiology worldwide Dr Krieger shows how epidemiologic theory has long shaped epidemiologic practice knowledge and the politics of public health

The Smartness Mandate Orit Halpern, Robert Mitchell, 2023-01-10 Over the last half century smartness the drive for ubiquitous computing has become a mandate a new mode of managing and governing politics economics and the environment Smart phones Smart cars Smart homes Smart cities The imperative to make our world ever smarter in the face

of increasingly complex challenges raises several questions What is this smartness mandate How has it emerged and what does it say about our evolving way of understanding and managing reality How have we come to see the planet and its denizens first and foremost as data collecting instruments In *The Smartness Mandate* Orit Halpern and Robert Mitchell radically suggest that smartness is not primarily a technology but rather an epistemology Through this lens they offer a critical exploration of the practices technologies and subjects that such an understanding relies upon above all artificial intelligence and machine learning The authors approach these not simply as techniques for solving problems of calculations but rather as modes of managing life human and other in terms of neo Darwinian evolution distributed intelligences and resilience all of which have serious implications for society politics and the environment The smartness mandate constitutes a new form of planetary governance and Halpern and Mitchell aim to map the logic of this seemingly inexorable and now naturalized demand to compute to illuminate the genealogy of how we arrived here and to point to alternative imaginaries of the possibilities and potentials of smart technologies and infrastructures

Ecology Revisited Astrid Schwarz, Kurt Jax, 2011-03-18 As concerns about humankind's relationship with the environment move inexorably up the agenda this volume tells the story of the history of the concept of ecology itself and adds much to the historical and philosophical debate over this multifaceted discipline The text provides readers with an overview of the theoretical institutional and historical formation of ecological knowledge The varied local conditions of early ecology are considered in detail while epistemological problems that lie on the borders of ecology such as disunity and complexity are discussed The book traces the various phases of the history of the concept of ecology itself from its 19th century origins and antecedents through the emergence of the environmental movement in the later 20th century to the future and how ecology might be located in the environmental science framework of the 21st century The study of ecological phenomena has never been confined solely to the work of researchers who consider themselves ecologists It is rather a field of knowledge in which a plurality of practices concepts and theories are developed Thus there exist numerous disciplinary subdivisions and research programmes within the field the boundaries of which remain blurred As a consequence the deliberation to adequately identify the ecological field of knowledge its epistemic and institutional setting is still going on This will be of central importance not only in locating ecology in the frame of 21st century environmental sciences but also for a better understanding of how nature and culture are intertwined in debates about pressing problems such as climate change the protection of species diversity or the management of renewable resources

Systems Thinkers Magnus Ramage, Karen Shipp, 2020-02-19 This book presents a biographical history of the field of systems thinking by examining the life and work of thirty of its major thinkers It discusses each thinker's key contributions the way this contribution was expressed in practice and the relationship between their life and ideas This discussion is supported by an extract from the thinker's own writing to give a flavour of their work and to give readers a sense of which thinkers are most relevant to their own interests

The Environment in Anthropology Nora

Haenn, Richard Wilk, 2006 Presenting ecology and current environmental studies from an anthropological point of view this book gives readers a strong intellectual foundation as well as offering practical tools for solving environmental problems

Sustainable Values, Sustainable Change Bryan G. Norton, 2015-12-16 Systematically investigates the philosophical foundations of sustainable development in the context of the history of environmental policy Compelling Choice Sustainability is a nearly ubiquitous concept today but can we ever imagine what it would be like for humans to live sustainably on earth One of the most trafficked terms in the press on university campuses and in the corridors of government sustainability has risen to prominence as a buzzword before the many parties laying claim to it have agreed on how to define it But the term's political currency urgently demands that we develop an understanding of this elusive concept While economists philosophers and ecologists argue about what in nature is valuable and why in *Sustainable Values Sustainable Change* Bryan Norton offers an action oriented pragmatic response to the disconnect between public and academic discourse around sustainability Looking to the arenas in which decisions are made and the problems driving these decisions Norton reveals that the path to sustainability cannot be guided by fixed objectives sustainability will instead be achieved through experimentation incremental learning and adaptive management Drawing inspiration from Aldo Leopold's famed metaphor of thinking like a mountain for a spatially explicit pluralistic approach to evaluating environmental change Norton outlines a new decision making process guided by deliberation and negotiation across science and philosophy Looking across scales to today's global problems Norton urges us to learn to think like a planet An excellent distillation of Norton's extensive and groundbreaking work Ben Minteer Arizona State University author of *Refounding Environmental Ethics* Engaging and important Sahotra Sarkar University of Texas at Austin author of *Environmental Philosophy From Theory to Practice* *American Tropics* Megan Raby, 2017-10-03 Biodiversity has been a key concept in international conservation since the 1980s yet historians have paid little attention to its origins Uncovering its roots in tropical fieldwork and the southward expansion of U.S. empire at the turn of the twentieth century Megan Raby details how ecologists took advantage of growing U.S. landholdings in the circum Caribbean by establishing permanent field stations for long term basic tropical research From these outposts of U.S. science a growing community of American tropical biologists developed both the key scientific concepts and the values embedded in the modern discourse of biodiversity Considering U.S. biological fieldwork from the era of the Spanish American War through the anticolonial movements of the 1960s and 1970s this study combines the history of science environmental history and the history of U.S. Caribbean and Latin American relations In doing so Raby sheds new light on the origins of contemporary scientific and environmentalist thought and brings to the forefront a surprisingly neglected history of twentieth century U.S. science and empire *Agroecological Practices For Sustainable Agriculture: Principles, Applications, And Making The Transition* Alexander Wezel, 2017-06-19 Good agroecological practices are indispensable for the development of sustainable agriculture In this book principles diversity and applications of agroecological practices for a

range of systems are presented transforming scientific research and participatory knowledge of production into practical application. It illustrates a broad range of research and teaching being used within the farming community to demonstrate best practice and current state of play within the field. Agroecological methods used in crop farming, grass based livestock farming, fish production and other complex farming systems are discussed. Conclusions are drawn from studies to provide an outlook on future trends of agroecological practices and on policies supporting implementation. Due to emphasis on real life application it is relevant not only to students of the agricultural sciences and public policy but also to researchers, stakeholders and policy makers involved in the development of sustainable agriculture.

Ecosystem Function in Savannas Michael J. Hill, Niall P. Hanan, 2010-11-17 Fascinating and diverse savanna ecosystems support a combination of pastoral and agropastoral communities alongside wild and domestic herbivores that can be found nowhere else. This diversity has made the study of these areas problematic. Ecosystem Function in Savannas: Measurement and Modeling at Landscape to Global Scales addresses some of the d

A World Not Made for Us Keith R. Peterson, 2020-09-01 In *A World Not Made for Us* Keith R. Peterson provides a broad reassessment of the field of environmental philosophy taking a fresh and critical look at three classical problems of environmentalism: the intrinsic value of nature, the need for an ecological worldview and a new conception of the place of humankind in nature. He makes the case that a genuinely critical environmental philosophy must adopt an ecological materialist conception of the human, a pluralistic value theory that emphasizes the need for value prioritization and a stratified categorial ontology that affirms the basic principle of human asymmetrical dependence on more than human nature. Integrating environmental ethics with the latest work in political ecology, Peterson argues it is important to understand that the world is not made for us and that coming to terms with this fact is a condition for survival in future human and more than human communities of liberation and solidarity.

Global Environmental Harm Rob White, 2013-01-11 Issues such as climate change, disposal of toxic waste and illegal fishing have generated increasing attention within criminological circles in recent years. This book brings together original cutting edge work that deals with global environmental harm from a wide variety of geographical and critical perspectives.

Knowing Nature Mara J. Goldman, Paul Nadasdy, Matthew D. Turner, 2011-03-15 Political ecology and science studies have found fertile meeting ground in environmental studies. While the two distinct areas of inquiry approach the environment from different perspectives, one focusing on the politics of resource access and the other on the construction and perception of knowledge, their work is actually more closely aligned now than ever before. *Knowing Nature* brings together political ecologists and science studies scholars to showcase the key points of encounter between the two fields and how this intellectual mingling creates a lively and more robust ecological framework for the study of environmental politics. The contributors all actively work at the interface between these two fields and here they use empirical material to explore questions of theoretical and practical import for understanding the politics that surround nature-society relations from wildlife management in the Yukon to soil

fertility in Kenya In addition they examine how various environmental knowledge claims are generated packaged promoted and accepted or rejected by the different actors involved in specific cases of environmental management conservation and development Finally they ask what is at stake in the struggles surrounding environmental knowledge how such struggles shape conceptions of the environment and whose interests are served in the process Embracing Philanthropic Environmentalism Will Sarvis,2019-06-27 This book addresses urban ecology green technology problems with climate change prediction groundwater contamination invasive species and many other topics and offers a guardedly optimistic interpretation of humanity s place in nature and our unique caretaker role Drawing upon scholarly and media sources the author presents a common sense analysis of environmental science debunking eco apocalyptic thinking along the way Compromised science masquerading as authoritative is revealed as a fundraising and policy influencing crusade by the environmental elite overshadowing unambiguous problems like environmental racism **How Nature Speaks** Yrjo Haila,Chuck Dyke,2006-03-17 Groundbreaking collection contends that humans must establish communication with the rest of nature and a mutually nurturing relationship that builds on nature s presence in all human practices *Philosophy of Complex Systems* ,2011-05-23 The domain of nonlinear dynamical systems and its mathematical underpinnings has been developing exponentially for a century the last 35 years seeing an outpouring of new ideas and applications and a concomitant confluence with ideas of complex systems and their applications from irreversible thermodynamics A few examples are in meteorology ecological dynamics and social and economic dynamics These new ideas have profound implications for our understanding and practice in domains involving complexity predictability and determinism equilibrium control planning individuality responsibility and so on Our intention is to draw together in this volume we believe for the first time a comprehensive picture of the manifold philosophically interesting impacts of recent developments in understanding nonlinear systems and the unique aspects of their complexity The book will focus specifically on the philosophical concepts principles judgments and problems distinctly raised by work in the domain of complex nonlinear dynamical systems especially in recent years Comprehensive coverage of all main theories in the philosophy of Complex Systems Clearly written expositions of fundamental ideas and concepts Definitive discussions by leading researchers in the field Summaries of leading edge research in related fields are also included The Silwood Circle Hannah Gay,World Scientific (Firm),2013 This is an original and wide ranging account of the careers of a close knit group of highly influential ecologists working in Britain from the late 1960s onwards The book can also be read as a history of some recent developments in ecology One of the group Robert May is a past president of the Royal Society and the author of what many see as the most important treatise in theoretical ecology of the later twentieth century That the group flourished was due not only to May s intellectual leadership but also to the guiding hand of T R E Southwood Southwood ended his career as Linacre Professor of Zoology at the University of Oxford where he also served a term as Vice Chancellor Earlier as a professor and director of the Silwood

Park campus of Imperial College London he brought the group together Since it began to coalesce at Silwood it has been named here the Silwood Circle Southwood promoted the interests of its members with the larger aim of raising the profile of ecological and environmental science in Britain Given public anxiety over the environment and the loss of ecosystems his actions were well timed Ecology which had been on the scientific margins in the first half of the twentieth century came to be viewed as a science central to modern existence The book illustrates its importance to many areas Members of the Silwood Circle have acted as government advisors in the areas of conservation and biodiversity resource management pest control food policy genetically modified crops sustainable agriculture international development defence against biological weapons and epidemiology and infectious disease control In recounting the science they carried out and how they made their careers the book reflects also on the role of the group and the nature of scientific success

Cognitive Justice in a Global World

Boaventura de Sousa Santos, 2007-10-23 Cognitive Justice in a Global World Prudent Knowledges for a Decent Life is an edited collection that springs from the now dormant debates known as The Science Wars which questioned the nature of scientific theories Learning from the debates about the plurality of truths and opinions editor Boaventura de Sousa Santos has realized an opportunity for strengthening the relations between the natural and social sciences with more epistemological affinities and for opening up new transnational dialogues between scientists and other producers of knowledge This book analyses in detail some of the topics that amount to a set of problematic relations between science and ethics between objectivity and neutrality between the sociological and theoretical condition of production and the limits of scientific rigor between public faith in science and the economic powers that determine scientific priorities and between science and other kinds of knowledge existing in society Maintaining that global social injustice is by and large epistemological injustice and that there can be no global social justice without global cognitive justice Cognitive Justice in a Global World is an important collection for higher level students and researchers in the social sciences philosophy of science and intellectual history
