Urban Disasters And Resilience In Asia:

Urban Disasters and Resilience in Asia Rajib Shaw, Atta-ur-Rahman, Akhilesh Surjan, Gulsan Ara Parvin, 2016-01-06 Urban Disasters and Resilience in Asia presents the latest information on the intensity and frequency of disasters. Specifically the fact that in urban areas more than 50% of the world's population is living on just 2% of the land surface with most of these cities located in Asia and developing countries that have high vulnerability and intensification. The book offers an in-depth and multidisciplinary approach to reducing the impact of disasters by examining specific evidence from events in these areas that can be used to develop best practices and increase urban resilience worldwide. As urban resilience is largely a function of resilient and resourceful citizens building cities which are more resilient internally and externally can lead to more productive economic returns. In an era of rapid urbanization and increasing disaster risks and vulnerabilities in Asian cities, *Urban Disasters and Resilience in Asia* is an invaluable tool for policy makers, researchers, and practitioners working in both public and private sectors. Explores a broad range of aspects of disaster and urban resiliency including environmental, economic, architectural, and engineering factors. Bridges the gap between urban resilience and rural areas and community building. Provides evidence-based data that can lead to improved disaster resiliency in urban Asia. Focuses on Asian cities, some of the most densely populated areas on the planet where disasters are particularly devastating. [Resilient Policies in Asian Cities](#) Mitsuru Tanaka, Kenshi Baba, 2019-08-13 This book presents a comprehensive framework and indicators that can be used to assess a city's degree of resilience. Based on surveys using bottom-up assessment tools, it proposes the concept, framework, and indicators of a resilient policy model including some participatory approaches. It also presents case studies of this and similar tools applied to Japanese and Asian cities, the highlights including information not previously available in English. Today the term resilience is prevalent in the context of sustainable societies. The IPCC AR5 published in 2014 again stressed the impact of climate change on natural disasters while in March 2015 at the World Conference on Disaster Risk Reduction the United Nations International Strategy of Disaster Reduction (UNISDR) published the Sendai Framework for Disaster Risk Reduction Action 2015-2030 which serves as a guideline for local governments. Offering transdisciplinary perspectives from fields such as policy science, urban planning, environmental science, social psychology, management, development, and geography, this book discusses the lessons learned from Asian case studies, explaining the challenges and the effectiveness of the tools and offering transdisciplinary insights for policymakers. [Hyogo Framework for Action and Urban Disaster Resilience](#) Yuki Matsuoka, Rajib Shaw, 2014-09-04 In a world which continues to experience dramatic suffering as a result of natural hazards, local-level disaster risk reduction efforts are of increasing importance. With reference to examples in the Philippines, this book analyses a local disaster risk resilience approach and suggests an effective model for enhancing such efforts in the future. **Urbanisation at Risk in the Pacific and Asia** David Sanderson, Laura Bruce, 2020-05-05 This book presents practical approaches for tackling the threats from climate change and disasters to

This timely handbook presents these diverse views to build a clearer understanding of theoretical contributions of urban studies in Southeast Asia and to provide a complete collection of scholarly works that are thematically structured and a useful tool for teaching urbanization in Southeast Asia. Following the introduction by the editor, the handbook is structured along central emerging themes. It contains six parts which are each introduced by the editor: Theorizing Urbanization in Southeast Asia, Migration Networks and Identities, Development and Discontents, Environmental Governance, The Social Production of the Urban Fabric, Social Change and Alternative Development. This handbook will be an essential reference work for scholars interested in Urban Studies, cities and urbanization in Asia and Southeast Asian Studies. **Rural-Urban**

Linkages for Sustainable Development Armin Kratzer, Jutta Kister, 2020-09-23. This book critically examines different forms of urban-rural links for sustainable development in different countries. As intertwined processes of globalization, digitalization, environmental challenges, and the search for sustainable development continue, rural and urban areas around the world become increasingly interconnected and interdependent. This book contributes to understanding the role of this growing interconnectedness from an economic-geographical perspective. It does so by theoretically and empirically addressing the various existing linkages such as food networks, value chains, and regional governance at local, regional, national, and international levels. In doing so, contributions extend and contrast existing approaches dealing with urban and rural areas separately by considering the interplay between these two as well as their consequences for sustainability transition pathways. This edited volume adds to the academic and policy debate by bringing together a variety of concepts and themes in order to shift the research and policy agenda away from simple dichotomy to different notions of rural-urban linkages. Offering multidisciplinary insights into rural-urban linkages, the book will be of interest to decision makers, practitioners, and researchers in the fields of economic geography, regional planning, food studies, and economics. **Urban Drought** Bhaswati Ray, Rajib Shaw, 2018-12-30. This book presents water insecurity issues in urban areas while developing a water security index and explores innovative approaches to water development and management with examples from Asian cities. The urban water crisis is a global phenomenon, but it is more obvious in the megacities of the developing world. Urban drought, although not a familiar term, will pose a significant threat to humankind in the near future, especially in the context of increasing population in cities. Many cities are already unable to provide safe, clean water for their citizens. Some of the world's largest cities depend heavily on groundwater for their water supply. It is unlikely that dependence on aquifers, which take many years to recharge, will be sustainable. As urban populations grow, water use will need to shift from agriculture to municipal and industrial uses, making decisions about allocating between different sectors difficult. Inefficient water use practices by households and industries, fragmented management of water between sectors and institutions, climate-induced water shortages, environmental degradation of water sources, and inadequate use of alternate sources are also issues of major concern. Despite recent advances in the literature, there exists a considerable gap in attempting an integrated water

resource management approach Covering all aspects of urban drought and water insecurity this book is a valuable resource for students researchers academics policy makers and development practitioners **Resilient Urbanism** Gihan

Karunaratne,2025-05-08 As urban populations grow unprecedentedly cities worldwide face pressures from rapid expansion climate change and social inequalities Resilient Urbanism critically examines how cities towns and informal settlements adapt to these multifaceted challenges exploring urban resilience in the 21st century This volume investigates resilience across a variety of urban contexts from megacities in the Global South to suburban and coastal regions through interdisciplinary essays The contributors examine how urban communities confront crises navigate urbanization adapt to climate change and respond to socioeconomic transformations using innovative and at times unconventional strategies Case studies highlight the lived experiences of urban dwellers from informal settlements in Maputo Rio de Janeiro and Hanoi to the challenges of achieving energy efficiency in Buenos Aires By interrogating dominant discourses on urban resilience Resilient Urbanism offers a reimagined perspective on how cities and their inhabitants address uncertainty and change It emphasizes the everyday practices of urban residents and explores the sociopolitical dynamics of urbanization presenting resilience not merely as a theoretical framework but as a lived evolving process This work sheds light on how cities withstand crises and actively reshape themselves in response to these disruptions This volume is an essential resource for scholars urban planners policymakers and professionals concerned with the future of cities It underscores that urban resilience is not just a theoretical concept but a vital imperative for navigating the complexities of a rapidly changing global landscape
