Sensing Machines Chris Salter, 2022-04-19 How we are tracked surveilled tantalized and seduced by machines ranging from smart watches and Roombas to immersive art installations Sensing machines are everywhere in our world As we move through the day electronic sensors and computers adjust our thermostats guide our Roombas count our steps change the orientation of an image when we rotate our phones There are more of these electronic devices in the world than there are people in 2020 thirty to fifty billion of them versus 7 8 billion people with more than a trillion expected in the next decade In

Sensing Machines Chris Salter examines how we are tracked surveilled tantalized and seduced by machines ranging from smart watches and mood trackers to massive immersive art installations Salter an artist scholar who has worked with sensors and computers for more than twenty years explains that the quantification of bodies senses and experience did not begin with the surveillance capitalism practiced by Facebook Amazon Netflix and Google but can be traced back to mathematical and statistical techniques of the nineteenth century He describes the emergence of the sensed self investigating how sensor technology has been deployed in music and gaming programmable and immersive art environments driving and even eating with e tongues and e noses that can taste and smell for us Sensing technology turns our experience into data but Salter s story isn t just about what these machines want from us but what we want from them new sensations the thrill of the uncanny and magic that will transport us from our daily grind [Smartest Creatures Raina Mooncrest, AI, 2025-03-05](#)

[Smartest Creatures](#) explores the fascinating realm of animal cognition questioning the notion that complex thought is exclusive to humans Delving into the cognitive abilities of dolphins chimpanzees crows and octopuses the book reveals how these animals exhibit intelligence through tool use intricate social structures and problem solving skills For instance dolphins possess complex communication systems and self awareness while crows demonstrate remarkable problem solving abilities The book begins by outlining the principles of animal cognition research and then dedicates chapters to each of the selected species detailing their unique cognitive strengths By adopting a comparative approach [Smartest Creatures](#) highlights both the commonalities and differences in intellectual strategies across these distantly related species Ultimately the book challenges anthropocentric views and broadens our understanding of intelligence as a diverse phenomenon shaped by evolution and comparative cognition [Soul Dog](#) Elena Mannes, 2018-11-13 An exploration of animal spirituality and the ability of animals to communicate with humans even in the afterlife 2019 Coalition of Visionary Resources Gold Award and Industry Choice and Peoples Choice Award Chronicles the author s profound relationship with her dog Brio his ability to read her mind and emotions and the messages she received from him after his death Shares the author s research with animal communicators psychics and scientists specializing in animal intelligence such as Rupert Sheldrake Explores animals thoughts and feelings interspecies communication and telepathy animal souls and the afterlife and animal reincarnation Paper with French flaps Looking for companionship after a near fatal car crash Elena Mannes an award winning television journalist and producer decided to get her first dog But what she found with her dog Brio shook the foundations of her physical and spiritual worlds sending her on a quest to discover the nature of his spiritual origins and to contemplate and seek out the possibility of interspecies communication even after death Soon after bringing her puppy home Mannes realized that the master companion relationship would not be possible with Brio who quickly showed that he had a mind and a spirit of his own A healer Mannes visited immediately focused on Brio exclaiming that he was an old soul Mannes s growing curiosity about the intelligence emotions and consciousness of Brio and other dogs led her to contact an animal psychic in

California who described with amazing accuracy Brio's favorite walks and the author's apartment from the dog's point of view. Motivated by her experience, Mannes produced a filmed segment with Diane Sawyer featuring the same psychic who described Sawyer's country house and her dog's favorite spots in the yard. Mannes's skeptical journalist background compelled her to investigate further. She delved into the world of animal communicators, psychics, and scientists studying animal intelligence, including Rupert Sheldrake, to find answers to her multiplying questions: Do animals have thoughts and feelings? Consciousness: Souls. Is interspecies communication possible? Can animals reincarnate? Spanning the entire life and afterlife of Brio, including his last days and his messages to the author after he passed on, this book also explores Mannes's investigations into the spiritual life of animals, offering a new understanding of the unbreakable bond between humans and animals. Mannes invites readers to move beyond the owner-pet relationship and shows us how to see animals as thinking, feeling spiritual beings whose connections with us extend far beyond life and death.
