The Changing of the Guard Roel C. Nedd, 2015-09-24 For the word of God is quick and powerful and sharper than any two edged sword piercing even to the dividing of soul and spirit and is a discerner of the thoughts and the intent of the heart Hebrew 4 12 THE WAR AGAINST RULING SPIRITS THE CURSE MUST BREAK DEMONS SHALL FLEE OR BE UPROOTED DEMON SHATTERING PRAYER POINTS THE CHANGING OF THE GUARD IS AN INSPIRED INSPIRATIONAL INFLUENTIAL STUDY MANUAL AND A WITNESSING AND DELIVERANCE TOOL THAT EMPHASIZES THE NECESSITY FOR SPIRITUAL REFORM IT GRANTS GREATER UNDERSTANDING OF SALVATIONS PLAN AND HELPS BELIEVERS TO SEE THE BIG PICTURE AND TO UNDERSTAND THE BIBLE AS IT IS WRITTEN MANY SHALL BE PULLED OUT OF THE DUMPSTER BEING GIVEN A FUTURE AND A HOPE Every valley shall be exalted and every mountain and hill shall be made low and the crooked shall be made straight and the rough places plain Isaiah 40 4 Uproot It Now Anthony Cute Amalokwu, 2015-07-06 Uproot it Now is a mini book on healing that is dedicated to all those that are suffering under the scourge of fibroid other tumours and various diseases It is a do it yourself DIY manual on how to appropriate divine healing and put an end to every stubborn bodily growth or disease *The Other Choice* Sophie Bartsich, Ernst G. Bartsich, 2000-08 The word choice in women s health is synonymous with abortion How to deal with an unwanted pregnancy has been the focal point of lengthy debates psychological research and significant policy changes There is however another decision that hundreds of American women make every month but that is not recognized as an important health concern the choice of whether or not to have a hysterectomy Every year 700 000 hysterectomies surgeries to remove the uterus are performed in the United States The hysterectomy is the most frequently performed operation in the country second only to the cesarean section While advances in the medical field have made the experience more bearable in the last few years it remains a major surgery with a long list of side effects and a heavy psychological burden Many women report post operative depression bladder or bowel dysfunction and decreased sexual interest Women of childbearing age must cope with the reality of no longer being able to bear children and for many patients the long recovery period interferes with their jobs and everyday activities Still the most disturbing fact is that of all these operations only 15% are medically necessary Of the 85% that could have been avoided about 60% were performed because of fibroid growths in the uterus These non cancerous tumors develop in or around the uterine wall and are usually undetected until the patient begins to manifest typical symptoms While 35% of all American women will develop fibroids at some point in their childbearing years thoroughly checking for them is not part of a routine gynecological exam The majority of women who have either large or numerous benign tumors in their uteruses are long unaware of it The discovery of uterine fibroids is usually sudden and upsetting Most women do not know that they are a common problem and as a result are not prepared to deal with the situation They know little about how fibroids behave and even less about their treatment options Most of the time the doctors they consult will tell them that removal of the

fibroids will only result in their growing back and further health complications A hysterectomy seems at first to be the only alternative for completely resolving the problem and avoiding repetitious treatment What many medical specialists fail to mention is that there are further alternatives As a matter of fact there are several These other options are not only less invasive but they are often less expensive call for a shorter hospital stay and in many cases do not require even partial removal of the uterus The root of the problem is that many gynecologists adhere to the outmoded belief that the uterus is useless after childbearing age Because most of the women who are diagnosed with uterine fibroids are symptomatic and by then nearing menopause their doctors do not consider it a priority to preserve their reproductive systems at all cost Another issue is that few gynecologists are well trained enough with the alternative procedures to hysterectomy to feel comfortable performing them themselves These physicians spend more time performing unnecessary surgeries and less time mastering different techniques all the while scaring their patients into a major operation They avoid recommending procedures such as a myomectomy opting instead to perform the more common hysterectomy just to be safe The safest thing however is to select the correct treatment alternative and preferably choose one that involves the least possible trauma to the mind and body Lack of information and unnecessary surgery are cause enough for concern in the debate about hysterectomies The problem runs even deeper however When a patient consents to having a procedure performed on her bod

It's a Sistah Thing Monique R. Brown, 2002 The first book about fibroids written especially for African American women includes both conventional and alternative approaches *Uterine Fibroids* Marco Mitidieri, Saverio Danese, Elisa Picardo, 2021 Uterine fibroids UFs are benign masses that develop from the smooth muscle cells and connective tissue of the wall of the uterus under the influence of genetic and or hormonal stimuli These benign tumors are postulated to arise from a single genetically altered mesenchymal cell under the influence of gonadal hormones namely progesterone and 17 estradiol The annual societal cost for fibroids is estimated up to 34 billion dollars calculated through combined expenditures for medical management of symptomatic fibroids lost work attributable to diagnosis of fibroids and obstetrical complications of fibroids In Italy for example they afflict 3 million women Estimates say that 20 to 80% of women experience them throughout life and are the most common form of benign cancer in childbearing age Various surgical and medical options are currently available to manage symptomatic uterine fibroids The choice of the appropriate therapeutic approach for UFs depends on several factors including women s age parity childbearing aspirations and wish to preserve fertility extent and severity of symptoms size number and location of myomas risk of malignancy and proximity to menopause This book reviews the diagnoses management and treatment of uterine fibroids c Provided by publisher
