São Paulo in the Twenty-First Century Eduardo Cesar Leão Marques, 2016-05-20 This book analyzes in detail the main social economic and special transformation of the city of S o Paulo In the last 30 years S o Paulo has become a more heterogeneous and less unequal city Contrary to some expectations the recent economic transformations did not produce social polarization and the localized processes of spaces production and the plural is increasingly important are more and more key to define their respective growth patterns social conditions forms of housing production service availability and urban precariousness In other dimensions however inequalities remain present and strong and certain disadvantaged areas have changed little and are still marked by strong social inequalities The metropolis remains heavily segregated in terms of race and class in a clear hierarchical structure The book shows that it is necessary to escape from dual and polarity interpretations This did not lead to the complete disappearance of a crudely radial and concentric structure not only due to geographic path dependence but superposes other elements over it leading to more complexes and continuous patterns A general summary of these elements could perhaps be stated as pointing to greater social spatial heterogeneity accompanied by smaller but reconfigured inequalities
