After decades in the shadows urban lighting is re emerging as a matter of public debate Long standing truths are increasingly questioned as a confluence of developments affects lighting itself and the way it is viewed Light has become an integral element of place making and energy saving initiatives alike Rapidly evolving lighting technologies are opening up new possibilities but also posing new challenges to planners and awareness is growing that artificial illumination is not purely benign but can actually constitute a form of pollution As a result public policy frameworks incentives and initiatives are undergoing a phase of innovation and change that will affect how cities are lit for years to come The first comprehensive compilation of current scientific discussions on urban lighting and light pollution from a social science and humanities perspective Urban Lighting Light Pollution and Society contributes to an evolving international debate on an increasingly controversial topic The contributions draw a rich panorama of the manifold discourses connected with artificial illumination in the past and present from early attempts to promote new lighting technologies in the late 19th and early 20th centuries to current debates on restricting its excessive usage in public space and the protection of darkness By bringing together a cross section of current findings and debates on urban lighting and light pollution from a wide variety of disciplines it reflects that artificial lighting is multifaceted in its qualities utilisation and interpretation Including case studies from the United States Europe and the UK Urban Lighting Light Pollution and Society is one of the first to take a serious assessment of light pollution and places and is a valuable resource for planners policy makers and students in related subjects

In the last decade lighting in the City of San Diego and its suburbs has increased substantially Astronomers at Palomar Observatory are concerned that the encroaching light will make many of their measurements impossible San Diego will soon convert its street lights to one of the more efficient sodium systems Astronomers prefer low pressure sodium lights because they do not interfere with the detection of distant stars Other groups prefer high pressure sodium lights because they have fair color rendition Many of the issues surrounding this choice have become controversial The function of this Note is to identify and analyze some of the important factors in this public policy question The first purpose of the research is to assess the significance of light pollution to astronomers The second purpose is to focus on methods of mitigating the effects of light pollution The third purpose is to compare the costs and efficiency of low and high pressure sodium lighting Our findings reveal that light pollution indeed presents a problem for many types of astronomical measurements Although a number of methods of reducing the impacts of

lighting might be adopted the most promising is conversion to low pressure sodium lights Costs of the low and high pressure systems in San Diego are comparable and the final decision on the type of lighting should be based on other factors Author
