Urban Microclimate Designing Between Buildings:

Urban Microclimate Evyatar Erell, David Pearlmutter, Terry J. Williamson, 2011 This title provides architects and urban design professionals with an understanding of how the structure of built spaces at all scales affects microclimatic conditions in the space between buildings and analyses the interaction between microclimate and each element of the urban landscape

Urban Microclimate Evyatar Erell, David Pearlmutter, Terence Williamson, 2012-06-25 The quality of life of millions of people living in cities could be improved if the form of the city were to evolve in a manner appropriate to its climatic context Climatically responsive urban design is vital to any notion of sustainability it enables individual buildings to make use of renewable energy sources for passive heating and cooling it enhances pedestrian comfort and activity in outdoor spaces and it may even encourage city dwellers to moderate their dependence on private vehicles Urban Microclimate bridges the gap between climatology research and applied urban design It provides architects and urban design professionals with an understanding of how the structure of the built environment at all scales affects microclimatic conditions in the space between buildings and analyzes the interaction between microclimate and each of the elements of the urban landscape In the first two sections of the book the extensive body of work on this subject by climatologists and geographers is presented in the language of architecture and planning professionals The third section follows each step in the design process and in part four a critical analysis of selected case study projects provides a demonstration of the complexity of applied urban design Practitioners will find in this book a useful guide to consult as they address these key environmental issues in their own work

The Urban Microclimate as Artifact Sascha Roesler, Madlen Kobi, 2018-09-24 Urban microclimates cannot be explained solely on the basis of scientific phenomena but are also affected materially and spatially by the city's local architecture The layout design and facade construction of buildings have a major impact on wind and temperature conditions For this reason architecture and urban design that have an effect on microclimates must be investigated in their social and cultural contexts The publication uses international case studies to explain these relationships The focus is on manifestations of urban microclimates in an architectural and urban design context The places investigated are located in France Italy the USA New Zealand the Philippines Taiwan and Burkina Faso

the latest most relevant issues in these areas **Designing Spaces for Natural Ventilation** Ulrike Passe, Francine Battaglia, 2015-03-12 Buildings can breathe naturally without the use of mechanical systems if you design the spaces properly This accessible and thorough guide shows you how in more than 260 color diagrams and photographs illustrating case studies and CFD simulations You can achieve truly natural ventilation by considering the building's structure envelope energy use and form as well as giving the occupants thermal comfort and healthy indoor air By using scientific and architectural visualization tools included here you can develop ventilation strategies without an engineering background Handy sections that summarize the science explain rules of thumb and detail the latest research in thermal and fluid dynamics will keep your designs sustainable energy efficient and up to date **Territorial Policy and Governance** Iain Deas, Stephen Hincks, 2017-02-24 In response to both policy and conceptual debates alternative narratives have begun to emerge about territorial governance and policymaking As local and regional policy actors strive to respond to the geographically uneven effects of the economic crises of the early twenty first century a crucial question emerges what are the opportunities and challenges presented by alternative forms of territorially based governance and policy The aim of this edited volume therefore is critically to explore the opportunities and challenges presented by different forms of territorial policy and governance Drawing on conceptual debates and empirical research from the United Kingdom and other international contexts the contributors engage with issues around the politics and governance of territorial development economic development planning and regeneration and the environment Territorial Policy and Governance addresses the question of how alternative forms of territorial governance and policy can help to shape patterns of urban and regional development highlighting the related opportunities constraints and challenges that confront their operationalisation This book will be essential reading for international audiences with an interest in territorial development governance politics human geography and planning and regeneration *Mobilities Design* Ole B. Jensen, Ditte Bendix Lanng, 2016-10-04 Contemporary society is marked and defined by the ways in which mobile goods bodies vehicles objects and data are organized moved and staged Against the background of the mobilities turn this book articulates a new and emerging research field namely that of mobilities design The book revolves around the following research question How are design decisions and interventions staging mobilities It builds upon the Staging Mobilities model Jensen 2013 in an exploratory inquiry into the problems and potentials of the design of mobilities The exchange value between mobilities and design research is twofold To mobilities research this means getting closer to the material and to engage in the creative exploratory and experimental approaches of the design world which offer new potential for innovative research Design research on the other hand might enter into a fruitful relationship with mobilities research offering a relational and mobile design thinking and a valuable basis for design reflections around the ubiquitous structures spaces and systems of mobilities Low Carbon Cities Steffen Lehmann, 2014-09-15 Low Carbon Cities is a book for practitioners students and scholars in architecture urban

planning and design It features essays on ecologically sustainable cities by leading exponents of urban sustainability case studies of the new directions low carbon cities might take and investigations of how we can mitigate urban heat stress in our cities microclimates The book explores the underlying dimensions of how existing cities can be transformed into low carbon urban systems and describes the design of low carbon cities in theory and practice It considers the connections between low carbon cities and sustainable design social and individual values public space housing affordability public transport and urban microclimates Given the rapid urbanisation underway globally and the need for all our cities to operate more sustainably we need to think about how spatial planning and design can help transform urban systems to create low carbon cities and this book provides key insights

The Sustainable City IX N. Marchettini,C.A. Brebbia,R. Pulselli,S.

Bastianoni,2014-09-23 Containing the proceedings of the 9th International Conference on Urban Regeneration and Sustainability this book addresses the multi disciplinary aspects of urban planning a result of the increasing size of cities the amount of resources and services required and the complexity of modern society Most of earth s population now lives in cities and the process of urbanisation still continues generating many problems deriving from the drift of the population towards them These problems can be resolved by cities becoming efficient habitats saving resources in a way that improves the quality and standard of living The process however faces a number of major challenges related to reducing pollution improving main transportation and infrastructure systems New urban solutions are required to optimise the use of space and energy resources leading to improvements in the environment i e reduction in air water and soil pollution as well as efficient ways to deal with waste generation These challenges contribute to the development of social and economic imbalances and require the development of new solutions Large cities are probably the most complex mechanisms to manage However despite such complexity they represent a fertile ground for architects engineers city planners social and political scientists and other professionals able to conceive new ideas and time them according to technological advances and human requirements The challenge of planning sustainable cities lies in considering their dynamics the exchange of energy and matter and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems Topics covered include Urban strategies Planning development and management Urban conservation and regeneration The community and the city Eco town planning Landscape planning and design Environmental management Sustainable energy and the city Transportation Quality of life Waterfront development Case studies Architectural issues Cultural heritage issues Intelligent environment and emerging technologies Planning for risk Disaster and emergency response Safety and security Waste management Infrastructure and society Urban metabolism

System City, 2013-08-19 A radical shift is taking place in the way that society is thinking about cities a change from the machine metaphors of the 20th century to mathematical models of the processes of biological and natural systems From this new perspective cities are regarded not simply as spatially extended material artefacts but as complex systems that are analogous to living organisms exhibiting many of the same characteristics There is an emerging view that the design of the thousands of new cities needed for an expanding world population are to be founded on intelligent and inhabited infrastructural systems or flow architectures of urban metabolisms The physical arrays of the flow architecture of the

city are intimately connected to the networks of subsidiary systems that collect and distribute energy materials and information. They animate the city and should therefore be intimately coupled to the spatial and cultural patterns of life in the city to the public spaces through which people flow and should unite rather than divide urban morphological and ecological systems. Featured architects: AMID, Cero9, Buro Happold, Foster Partners, Groundlab, and SOM. Contributors include Joan Busquets, Kate Davies, and Liam Young. Mehran Gharleghi, Evan Greenberg, and George Jeronimidis. Marina Lathouri, Wolf Mangelsdorf, Daniel Segraves, Jack Self, Ricard Sol, and Sergi Valverde, and Iain Stewart.

Greening Cities Puay Yok Tan, Chi Yung Jim, 2017-03-29. This book offers an overview of recent scientific and professional literature on urban greening and urban ecology, focusing on diverse disciplines such as landscape architecture, geography, urban ecology, urban climatology, biodiversity, conservation, urban governance, architecture, and urban hydrology. It includes contributions in which academics, public policy experts, and practitioners share their considerable knowledge on the multi-faceted aspects of greening cities. The greening of cities has witnessed a global resurgence over the past two decades and has made a significant contribution to urban liveability and sustainability as well as increasing resilience. As urban greening efforts continue to expand, it is useful to promote recent advances in our understanding of various aspects of planning, design, and management of urban greenery, but at the same time, it is also important to realize that there are important gaps in our knowledge and that further research is needed. The book is organized in three main parts: concepts, functions, and forms of urban greening. The first part examines the historical roots of greening cities and how the burgeoning field of urban ecology can contribute useful principles and strategies to guide the planning, design, and management of urban greening. The second part shifts the focus to the diverse range of services, the functions provided by urban greening, such as those related to urban climate, urban biodiversity, human health, and community building. The final part explores conventional, often neglected but important forms of urban greenery, such as urban woodlands and urban farms, as well as relatively recent forms of urban greenery like those integrated with buildings and waterways. It offers a ready reference resource for researchers, practitioners, and policy makers to grasp the critical issues and trigger further studies and applications in the quest for high performance green cities.
