Visual Masking Studying Perception Attention And Consciousness:

Visual Masking Talis Bachmann, Gregory Francis, 2013-11-13 Visual masking is a technique used in cognitive research to understand pre conscious processes priming for example consciousness visual limits and perception issues associated with psychopathology This book is a short format review of research using visual masking how it has been used and what these experiments have discovered Topics covered include concepts varieties and theories of masking masking and microgenetic mechanisms and stages of visual processing psychopharmacological and genetic factors in masking and more Provides succinct information about the widely dispersed masking studies and points out some new trends in masking research Reviews transcranial magnetic stimulation TMS as an alternative to the traditional psychophysical masking methods Comments on the methodological pitfalls hidden in the practice of masking helping to improve the quality of future research where masking is used as a tool Informs readers about recent developments in theoretical attempts to understand masking

Brain States and Neural Mechanisms of Consciousness Olivia Gosseries, 2022-09-30 *Transitions Between Consciousness and Unconsciousness* Marcus Rothkirch, Morten Overgaard, Guido Hesselmann, 2018-03-13 Over the last years a large body of experimental data have been generated in the attempt to understand consciousness and its neural underpinnings In this respect particular interest has been paid to the attempt to distinguish between conscious experience and unconscious states which however may still be considered as mental states e g in virtue of their representational nature This is of course not without reason A deep understanding of that which specifically characterizes conscious states including neural correlates and cognitive functions may crucially inform the ambition of understanding the relation between experience and the physical world Nevertheless the question has historically been challenged by the fact that consciousness is available in the first person only not to other people including scientists Different methodological traditions and choices have led to quite different understandings of how conscious and unconscious states relate and diverse empirical work has been inspired and guided by various cognitive and neurobiological theories of consciousness The very diverse viewpoints include such different positions as the idea that unconscious states are associated with the very same functional characteristics as conscious states and the idea that no informational state that is available for action can be completely unconscious The Research Topic *Transitions between consciousness and unconsciousness* is therefore devoted to this particular question how to understand the relation and transition between consciousness and unconsciousness We hope that the reader will find the collected articles both informative and thought provoking and that this Research Topic will stimulate the scientific debate *Beyond the simple contrastive analysis: Appropriate experimental approaches for unraveling the neural basis of conscious experience* Jaan Aru, Talis Bachmann, 2015-06-26 Contrasting conditions with and without conscious experience has served consciousness research well However research based on this simple contrast has led to controversies about the neural basis of conscious experience One key reason for these ongoing debates seems to be that the simple

contrast between conditions with and without consciousness is not specific for unraveling the neural basis of conscious experience but rather also leads to other processes that precede or follow it Acknowledging this methodological problem implies that some of the previous research findings about the neural underpinnings of conscious experience are actually reflecting the prerequisites and consequences rather than the direct correlates of conscious perception Thus it is required to re evaluate the previous results to find out which of them are telling us anything about the neural basis of consciousness But first and foremost to overcome this methodological problem we need new experimental paradigms that go beyond the simple contrastive analysis or find the ways how some older but well forgotten paradigms may foster a new look at this emerging problem Accordingly this research topic is looking for empirical and theoretical contributions that 1 envision new and suitable experimental approaches to study consciousness that are free from the limitations of the simple contrastive analysis 2 provide empirical data that help to separate the neural correlates of conscious experience from the prerequisites and consequences of it 3 help to re assess previous research findings about the neural correlates of conscious perception in the light of the methodological problems with the traditional contrastive analysis We hope that the theoretical insights and experimental approaches collected within this Research Topic help us to gain a more refined understanding of the neural basis of conscious experience

The Constitution of Phenomenal Consciousness Steven M. Miller, 2015-06-15

Philosophers of mind have been arguing for decades about the nature of phenomenal consciousness and the relation between brain and mind More recently neuroscientists and philosophers of science have entered the discussion Which neural activities in the brain constitute phenomenal consciousness and how could science distinguish the neural correlates of consciousness from its neural constitution At what level of neural activity is consciousness constituted in the brain and what might be learned from well studied phenomena like binocular rivalry attention memory affect pain dreams and coma What should the science of consciousness want to know and what should explanation look like in this field How should the constitution relation be applied to brain and mind and are other relations like identity supervenience realization emergence and causation preferable Building on a companion volume on the constitution of visual consciousness AiCR 90 this volume addresses these questions and related empirical and conceptual territory It brings together for the first time scientists and philosophers to discuss this engaging interdisciplinary topic

Behavioral Methods in Consciousness Research Morten Overgaard, 2015-03-26

The past two decades have seen a surge of interest in the topic of consciousness with the result that the research literature has expanded greatly However until now there has been little consensus on just which methods are the most effective for the study of consciousness As a result a wide range of experimental paradigms have been employed sometimes making it difficult to compare and contrast experimental findings Behavioral Methods in Consciousness Research is the first book of its kind providing an overview of methods and approaches for studying consciousness The chapters are written by leading researchers and experts who describe the methods they actually use in their own studies along with their

pitfalls problems and difficulties For all students and researchers embarking on research in this area and even seasoned researchers this book is a valuable source of information in helping them design perform and analyze scientifically rigorous experiments *Visual Masking* Bruno Breitmeyer, Haluk Ogmen, 2006-04-20 Where most current approaches to the study of visual consciousness adopt a steady state view the approach presented in this book explores its dynamic properties down to a resolution in the millisecond range BOOK JACKET **Scientific Approaches to Consciousness** Jonathan D.
