Visual Attention and Consciousness Jay Friedenber,2012-12-12 Consciousness is perhaps one of the greatest mysteries in the universe This ambitious book begins with a philosophical approach to consciousness examining some key questions such as what is meant by the term conscious and how this applies to vision The book then explores major visual phenomena related to attention and conscious experience including filling in processes aftereffects multi stability forms of divided attention models of visual attention priming effects types of attentional blindness and various visual disorders For each phenomenon the biological and cognitive level research is reviewed Themes touched upon throughout are the relation between consciousness and attention automatic vs willful processes singularity vs multiplicity and looking without seeing The book concludes with an evolutionary approach describing possible functions that visual consciousness may serve and how those may affect the way we see The systematic review of key topics and the multitude of perspectives make this book an ideal primary or ancillary text for graduate courses in perception vision consciousness or philosophy of mind **Visual**

Attention and Cognition W. H. Zangemeister,H. S. Stiehl,C. Freksa,1996-01-01 Hardbound The goal of this book is to put together some of the main interdisciplinary aspects that play a role in visual attention and cognition The book is aimed at researchers and students with interdisciplinary interest In the first chapter a general discussion of the influential scanpath theory and its implications for human and robot vision is presented Subsequently four characteristic aspects of the general theme are dealt with in topical chapters each of which presents some of the different viewpoints of the various disciplines involved They cover neuropsychology clinical neuroscience modeling and applications Each of the chapters opens with a synopsis tying together the individual contributions **Principles of Visual Attention** Claus Bundesen,Thomas

Habekost,2008-08-14 The nature of attention is one of the oldest and most central problems in psychology Principles of Visual Attention contains a detailed review of the most important research done on attention in vision spanning cognitive psychology brain imaging patient studies and recordings from single cells in the visual cortex Visual Attention and

Tsuchiya,Jeroen J. Van Boxtel,2013-06-03 Although often used in everyday speech and in the scholarly literature selective attention and consciousness lack clear undisputed definitions Partly because of this deficit there exists a lively debate on the relationship between the two Nevertheless attention has been studied scientifically for a long time because a variety of tasks allow researchers to control several of its aspects e g focused and feature based attention Consciousness as a scientific subject of study has emerged more recently but is now rapidly gaining traction Scientific studies of consciousness concern the state or level of consciousness e g awake as opposed to in coma dreamless sleep or under anaesthesia as well as the contents of consciousness or the phenomenology of perception With the increase in consciousness focused research there is

a concomitant surge in research examining the relationship between attention and consciousness This relationship between attention and consciousness is the topic of this Research Topic Contributions related to or focused solely on attention or on consciousness will not be considered It had long been assumed that attention and consciousness are inextricably intertwined two sides of the same coin However recently substantial evidence has emerged that attention and consciousness are interacting but separable processes It is however debated how tight the interactions are and what the exact nature of the relationship is Therefore we invite researchers from different camps to provide opinionated but balanced literature reviews Different groups will interpret the same data in different ways We feel that combining these views in one Research Topic is immensely valuable to researchers from different fields Apart from reviews we also invite potential contributors to provide new and exciting evidence in the form of original contributions that may support any of the different views Even though attention and consciousness are critical aspects of many different cognitive processes they are mainly studied though not exclusively in the domain of visual perception In other sensory modalities e g olfaction or audition it is currently not clear whether distinctions between attention and consciousness exist which is even more true for other cognitive processes such as memory Therefore we specifically invite contributions covering the auditory somatosensory olfactory and memory domain We ask all contributors to provide discussions on the relationship between attention and consciousness and focus on 1 the influence of attention on sensory processing 2 the formation of conscious perception 3 the evidence for unconscious processing and its modulation by attention 4 potential indications for dissociations between attention and consciousness e g does paying attention to a stimulus decrease performance on e g a discrimination task 5 neuroimaging and neurophysiology data pertaining to these questions Often one is caught in one s own research field and lacks the time or the knowledge to delve into another field This Research Topic should provide a great overview in great breadth of the current state of knowledge on the links between attention and consciousness and their interactions in several different sensory modalities
