Reconnaissance units are the commander's eyes and ears on the battlefield. They are task organized as a highly trained six man team capable of conducting specific missions behind enemy lines. Employed as part of the Marine Air Ground Task Force, reconnaissance teams provide timely information to the supported commander to shape and influence the battlefield. The varying types of missions a Reconnaissance team conduct depends on how deep in the battle space they are operating. Division Reconnaissance units support the close and distant battlespace while Force Reconnaissance units conduct deep reconnaissance in support of a landing force. Common missions include but are not limited to: Plan, coordinate and conduct amphibious ground reconnaissance and surveillance to observe, identify and report enemy activity and collect other information of military significance. Conduct specialized surveying to include underwater reconnaissance and/or demolitions, beach permeability and topography, routes, bridges, structures, urban/rural areas, helicopter landing zones (LZ), parachute drop zones (DZ), aircraft forward operating sites and mechanized reconnaissance missions. When properly task organized with other forces, equipment or personnel assist in specialized engineer, radio and other special reconnaissance missions. Infiltrate mission areas by necessary means to include surface, subsurface and airborne operations. Conduct Initial Terminal Guidance (ITG) for helicopters, landing craft, parachutists, air delivery and resupply. Designate and engage selected targets with organic weapons and force fires to support battlespace shaping. This includes designation and terminal guidance of precision guided munitions. Conduct post strike reconnaissance to determine and report battle damage assessment on a specified target or area. Conduct limited scale raids and ambushes. .NET and COM Adam Nathan, 2002-01-31. This is the eBook version of the printed book. If the print book includes a CD-ROM, this content is not included within the eBook version. The focus of the book is on COM Interoperability since it's a much larger subject and the heart of the discussion is broken down into four parts: Using COM Components Within the .NET Framework, Using .NET Framework Components from COM, Designing Good .NET Framework Components for COM Clients, Designing Good COM Components for .NET Framework Clients. The scope of the book is just about everything related to using unmanaged code in the .NET Framework. Technologies built on top of COM Interoperability are also covered: Interoperability of Windows Forms, Controls and ActiveX controls, Interoperability with COM and Interoperability with Distributed COM (DCOM). Although Platform Invocation Services is a separate technology from COM.

Interoperability there are many areas of overlap so including in the book is a natural fit All of these technologies are a core part of the Common Language Runtime and NET Framework and will likely be used not only as the path of migration for existing software projects but for brand new software development for the next several years The C# Player's Guide
