Vivo A Semantic Approach To Scholarly Networking And Discovery Mike Conlon:

VIVO Katy Borner,Ying Ding,Mike Conlon,Jon Corson-Rikert,2022-05-31 The world of scholarship is changing rapidly Increasing demands on scholars the growing size and complexity of questions and problems to be addressed and advances in sophistication of data collection analysis and presentation require new approaches to scholarship A ubiquitous open information infrastructure for scholarship consisting of linked open data open source software tools and a community committed to sustainability are emerging to meet the needs of scholars today This book provides an introduction to VIVO <http://vivoweb.org> a tool for representing information about research and researchers their scholarly works research interests and organizational relationships VIVO provides an expressive ontology tools for managing the ontology and a platform for using the ontology to create and manage linked open data for scholarship and discovery Begun as a project at Cornell and further developed by an NIH funded consortium VIVO is now being established as an open source project with community participation from around the world By the end of 2012 over 20 countries and 50 organizations will provide information in VIVO format on more than one million researchers and research staff including publications research resources events funding courses taught and other scholarly activity The rapid growth of VIVO and of VIVO compatible data sources speaks to the fundamental need to transform scholarship for the 21st century Table of Contents Scholarly Networking Needs and Desires The VIVO Ontology Implementing VIVO and Filling It with Life Case Study University of Colorado at Boulder Case Study Weill Cornell Medical College Extending VIVO Analyzing and Visualizing VIVO Data The Future of VIVO Growing the Community [Knowledge Graphs](#) Aidan Hogan,Eva Blomqvist,Michael Cochez,Claudia d'Amato,Gerard de Melo,Claudio Gutierrez,Sabrina Kirrane,Jose Emilio Labra Gayo,Roberto Navigli,Sebastian Neumaier,Axel Polleres,Sabbir Rashid,Anisa Rula,Antoine Zimmermann,Lukas Schmelzeisen,Axel-Cyrille Ngonga Ngomo,Juan Sequeda,Steffen Staab,2022-06-01 This book provides a comprehensive and accessible introduction to knowledge graphs which have recently garnered notable attention from both industry and academia Knowledge graphs are founded on the principle of applying a graph based abstraction to data and are now broadly deployed in scenarios that require integrating and extracting value from multiple diverse sources of data at large scale The book defines knowledge graphs and provides a high level overview of how they are used It presents and contrasts popular graph models that are commonly used to represent data as graphs and the languages by which they can be queried before describing how the resulting data graph can be enhanced with notions of schema identity and context The book discusses how ontologies and rules can be used to encode knowledge as well as how inductive techniques based on statistics graph analytics machine learning etc can be used to encode and extract knowledge It covers techniques for the creation enrichment assessment and refinement of knowledge graphs and surveys recent open and enterprise knowledge graphs and the industries or applications within which they have been most widely adopted The book closes by discussing the current limitations and future directions along which knowledge graphs are likely to evolve This

book is aimed at students researchers and practitioners who wish to learn more about knowledge graphs and how they facilitate extracting value from diverse data at large scale To make the book accessible for newcomers running examples and graphical notation are used throughout Formal definitions and extensive references are also provided for those who opt to delve more deeply into specific topics

Smart Citizens, Smarter State Beth Simone Noveck, 2015-11-02 Governments make too little use of the skills and experience of citizens New tools what Beth Simone Noveck calls technologies of expertise are making it possible to match citizen expertise to the demand for it in government She offers a vision of participatory democracy rooted not in voting or crowdsourcing but in people s knowledge and know how

Entity Resolution in the Web of Data Vassilis Christophides, Vasilis Efthymiou, Kostas Stefanidis, 2022-05-31 In recent years several knowledge bases have been built to enable large scale knowledge sharing but also an entity centric Web search mixing both structured data and text querying These knowledge bases offer machine readable descriptions of real world entities e g persons places published on the Web as Linked Data However due to the different information extraction tools and curation policies employed by knowledge bases multiple complementary and sometimes conflicting descriptions of the same real world entities may be provided Entity resolution aims to identify different descriptions that refer to the same entity appearing either within or across knowledge bases The objective of this book is to present the new entity resolution challenges stemming from the openness of the Web of data in describing entities by an unbounded number of knowledge bases the semantic and structural diversity of the descriptions provided across domains even for the same real world entities as well as the autonomy of knowledge bases in terms of adopted processes for creating and curating entity descriptions The scale diversity and graph structuring of entity descriptions in the Web of data essentially challenge how two descriptions can be effectively compared for similarity but also how resolution algorithms can efficiently avoid examining pairwise all descriptions The book covers a wide spectrum of entity resolution issues at the Web scale including basic concepts and data structures main resolution tasks and workflows as well as state of the art algorithmic techniques and experimental trade offs

Library Linked Data in the Cloud Carol Jean Godby, Shenghui Wang, Jeffrey K. Mixer, 2022-06-01 This book describes OCLC s contributions to the transformation of the Internet from a web of documents to a Web of Data The new Web is a growing cloud of interconnected resources that identify the things people want to know about when they approach the Internet with an information need The linked data architecture has achieved critical mass just as it has become clear that library standards for resource description are nearing obsolescence Working for the world s largest library cooperative OCLC researchers have been active participants in the development of next generation standards for library resource description By engaging with an international community of library and Web standards experts they have published some of the most widely used RDF datasets representing library collections and librarianship This book focuses on the conceptual and technical challenges involved in publishing linked data derived from traditional library metadata This transformation is a high priority because most searches

for information start not in the library nor even in a Web accessible library catalog but elsewhere on the Internet Modeling data in a form that the broader Web understands will project the value of libraries into the Digital Information Age The exposition is aimed at librarians archivists computer scientists and other professionals interested in modeling bibliographic descriptions as linked data It aims to achieve a balanced treatment of theory technical detail and practical application
