**Treatise on Basic Philosophy** Mario BUNGE,1974-11-30 In this Introduction we shall sketch a profile of our field of inquiry This is necessary because semantics is too often mistaken for lexicography and therefore dismissed as trivial while at other times it is disparaged for being concerned with reputedly shady characters such as meaning and allegedly defunct ones like truth Moreover our special concern the semantics of science is a newcomer at least as a systematic body and therefore in need of an introduction I GOAL Semantics is the field of inquiry centrally concerned with meaning and truth It can be empirical or nonempirical When brought to bear on concrete objects such as a community of speakers semantics seeks to answer problems concerning certain linguistic facts such as disclosing the interpretation code inherent in the language or explaining the speakers ability or inability to utter and understand new sentences of the language This kind of semantics will then be both theoretical and experimental it will be a branch of what used to be called behavioral science *Matter and Mind* Mario Bunge,2010-09-14 This book discusses two of the oldest and hardest problems in both science and philosophy What is matter and What is mind A reason for tackling both problems in a single book is that two of the most influential views in modern philosophy are that the universe is mental idealism and that the everything real is material materialism Most of the thinkers who espouse a materialist view of mind have obsolete ideas about matter whereas those who claim that science supports idealism have not explained how the universe could have existed before humans emerged Besides both groups tend to ignore the other levels of existence chemical biological social and technological If such levels and the concomitant emergence processes are ignored the physicalism spiritualism dilemma remains unsolved whereas if they are included the alleged mysteries are shown to be problems that science is treating successfully Reframing the Social Professor Poe Yu-ze Wan,2013-01-28 Drawing extensively on the research findings of natural and social sciences both in America and Europe Reframing the Social argues for a critical realist and systemist social ontology designed to shed light on current debates in social theory concerning the relationship of social ontology to practical social research and the nature of the social It explores the works of the systems theorist Mario Bunge in comparison with the approach of Niklas Luhmann and critical social systems theorists to challenge the commonly held view that the systems based approach is holistic in nature and necessarily downplays the role of human agency Theoretically sophisticated and investigating the work of a theorist whose work has until now received insufficient attention in Anglo American thought this book will be of interest to those working in the field of social theory as well as scholars concerned with philosophy of social science the project of analytical sociology and the nature of the relationship between the natural and social sciences **Measurement across the Sciences** Luca Mari,Mark Wilson,Andrew Maul,2021-03-30 This book proposes a conceptual framework for understanding measurement across a broad range of scientific fields and areas of application such as physics engineering education and psychology The authors who themselves span these disciplines argue that the justification of the public trust attributed to measurement

results can in principle apply identically to both physical and psychosocial properties They further argue that the lack of a common conceptualization of measurement hampers interdisciplinary communication and limits the ability to share knowledge They advance their views by first surveying the conceptual history of the philosophy of measurement and arguing that classical operationalist and representational perspectives on measurement each make important contributions but also each have important shortcomings A synthesis is then offered as the foundation for a new conceptual framework The authors describe how the framework which operates as a shared concept system supports understanding measurement's work in different domains using examples in the physical and human sciences They consider connections and consequences with respect to causality objectivity and intersubjectivity among other topics and how measurement science concepts and issues are construed across these disciplines and settings They also address contemporary issues and controversies within measurement in the light of the framework including operationalism definitional uncertainty and the relations between measurement and computation The book concludes with a justification for the basic claim that measurement is an empirical and informational process that produces explicitly justifiable information Researchers and academics across a wide range of disciplines including biological physical social and behavioral scientists as well as specialists in measurement and philosophy will appreciate the work's fresh and provocative approach to the field at a time when sound measurements of complex scientific systems are increasingly essential to solving critical global problems

teaching research and training men and women in multiple disciplines Life lessons fall like ripe fruit from this book bringing us closer to a concept a philosophical idea a scientific digression which had since been uncovered in numerous notes articles or books Bunge writes about the life experiences in this book with passion naturalness and with a colloquial frankness whether they be persecutions banishment imprisonment successes would be losses emotions relationships debates impressions or opinions about people or things In his pages we pass by the people with whom he shared a fruitful century of achievements and incredible depths of thought Everything is remembered with sincerity and humor This autobiography is in truth Bunge on Bunge sharing everything that passes through the sieve of his memory as he would say Mario s many grandchildren are a testament to his proud standing as a family man and at the age of 96 he gives us a book for everyone for those who value the memories that hold the trauma of his life as well as for those who share his passion for science and culture Also perhaps for some with whom he has had disagreements or controversy for he still deserves recognition for being a staunch defender of his convictions
