Handbook of Stemmatalogy Philipp Roelli, 2020-09-07 Stemmatalogy studies aspects of textual criticism that use genealogical methods to analyse a set of copies of a text whose autograph has been lost This handbook is the first to cover the entire field encompassing both theoretical and practical aspects of traditional as well as modern digital methods and their history As an art ars stemmatalogy s main goal is editing and thus presenting to the reader a historical text in the most satisfactory way As a more abstract discipline scientia it is interested in the general principles of how texts change in the process of being copied Thirty eight experts from all of the fields involved have joined forces to write this handbook whose eight chapters cover material aspects of text traditions the genesis and methods of traditional Lachmannian textual criticism and the objections raised against it as well as modern digital methods used in the field The two concluding chapters take a closer look at how this approach towards texts and textual criticism has developed in some disciplines of textual scholarship and compare methods used in other fields that deal with descent with modification The handbook thus serves as an introduction to this interdisciplinary field

Gastrointestinal Pathology Geraint T. Williams, 2012-12-06 There have been many advances in the field of gastrointestinal pathology which are of considerable clinical significance during the 13 years since the last publication of a volume of Current Topics in Pathology devoted to this subject Many have arisen from the application of new techniques of histochemistry immunocytochemistry quantitative morphometry and molecular and cell biology to gastrointestinal diseases but some notably the recognition of the association of *Campylobacter pylori* with the commonest type of chronic gastritis have been achieved using such long established routine histological procedures that one wonders how their significance had escaped recognition for so long The topics covered in this volume have been selected because they present advances of relevance to the diagnostic clinical pathologist However they represent the personal selection of the editor and are in no way exhaustive Many other examples of progress in our understanding of the pathophysiology of gastrointestinal diseases have been omitted either because of the confines of space or because they have been well reviewed recently in other publications Most of the workload of the practising gastrointestinal pathologist involves the diagnosis and assessment either of inflammation or of neoplasia in the alimentary tract and this is reflected in the topics presented in this book
