When Walking Fails When Walking Fails:

When Walking Fails Lisa I. Iezzoni, 2003 Annotation An upbeat hopeful guide for people who have trouble walking ranging from those who have difficulty walking more than a few yards to the wheelchair bound The freedom that comes from movement is the important thing Iezzoni contends whether under one's own volition or with the help of mobility aids canes wheelchairs scooters etc

When Walking Fails Lisa Iezzoni, 2003-06-10 Roughly one in ten adult Americans find their walking slowed by progressive chronic conditions like arthritis back problems heart and lung diseases and diabetes In this passionate and deeply informed book Lisa I. Iezzoni describes the personal experiences of and societal responses to adults whose mobility makes it difficult for them to live as they wish partly because of physical and emotional conditions and partly because of persisting societal and environmental barriers Basing her conclusions on personal experience a wealth of survey data and extensive interviews with dozens of people from a wide social spectrum Iezzoni explains who has mobility problems and why how mobility difficulties affect people's physical comfort attitudes daily activities and relationships with family and friends throughout their communities strategies for improving mobility and how the health care system addresses mobility difficulties providing and financing services and assistive technologies Iezzoni claims that although strategies exist to improve mobility many people do not know where to turn for advice She addresses the need to inform policymakers about areas where changes will better accommodate people with difficulty walking This straightforward and engaging narrative clearly demonstrates that improving people's ability to move freely and independently will enhance overall health and quality of life not only for these persons but also for society as a whole

Why Transportation Fails Astrid Wood, 2025-07-29 **Why Transportation Fails** offers an in depth critique of transportation failures in South Africa and beyond Minibus taxis are unreliable and overcrowded buses and trains are old and poorly maintained and new services are derailed by spiraling capital and operational costs protracted and politicized rollouts and unsolvable infrastructural challenges Rather than focusing on these failures the conceptual and practical analyses in this book develop a critical understanding of transportation and highlight the opportunities for transportation to be more inclusive innovative and sustainable This book applies cutting edge scholarship from geography and urban studies decolonial geographies Black geographies policy mobilities walking geographies animal geographies art geographies and health geographies to reframe transportation failure The interdisciplinarity of this scholarship builds an approach that not only tells the story of transportation in South Africa but also uncovers a range of conceptual interpretations and imaginations that stretch beyond urban mobilities and urban development In decentering traditional geographies of knowledge production **Why Transportation Fails** contributes to critical considerations of urban transportation in Africa and aspects of transportation justice within social and spatial transformation Given the never ending financial and political investment in solving transportation **Why Transportation Fails** is an essential reading for scholars of architecture development geography politics sociology and urban planners and practitioners **A**

Textbook of Neural Repair and Rehabilitation: Volume 2, Medical Neurorehabilitation Michael Selzer, Stephanie Clarke, Leonardo Cohen, Pamela Duncan, Fred Gage, 2006-02-16 In two freestanding but linked volumes Textbook of Neural Repair and Rehabilitation provides comprehensive coverage of the science and practice of neurological rehabilitation This volume Medical Neurorehabilitation can stand alone as a clinical handbook for neurorehabilitation It covers the practical applications of the basic science principles presented in volume 1 provides authoritative guidelines on the management of disabling symptoms and describes comprehensive rehabilitation approaches for the major categories of disabling neurological disorders Emphasizing the integration of basic and clinical knowledge this book and its companion are edited and written by leading international authorities Together they are an essential resource for neuroscientists and provide a foundation for the work of clinical neurorehabilitation professionals *Principles of Random Walk* Frank Spitzer, 2001 More than 100 pages of examples and problems illustrate and clarify the presentation **BOOK JACKET The Self-Avoiding Walk** Neal Madras, Gordon Slade, 2013-11-27 A self avoiding walk is a path on a lattice that does not visit the same site more than once In spite of this simple definition many of the most basic questions about this model are difficult to resolve in a mathematically rigorous fashion In particular we do not know much about how far an n step self avoiding walk typically travels from its starting point or even how many such walks there are These and other important questions about the self avoiding walk remain unsolved in the rigorous mathematical sense although the physics and chemistry communities have reached consensus on the answers by a variety of nonrigorous methods including computer simulations But there has been progress among mathematicians as well much of it in the last decade and the primary goal of this book is to give an account of the current state of the art as far as rigorous results are concerned A second goal of this book is to discuss some of the applications of the self avoiding walk in physics and chemistry and to describe some of the nonrigorous methods used in those fields The model originated in chemistry several decades ago as a model for long chain polymer molecules Since then it has become an important model in statistical physics as it exhibits critical behaviour analogous to that occurring in the Ising model and related systems such as percolation Animated Landscapes Chris Pallant, 2015-08-27 Winner of the 2017 McLaren Lambart Award for Best Book on the Subject of Animation Studying landscape in cinema isn't quite new it'd be hard to imagine Woody Allen without New York or the French New Wave without Paris But the focus on live action cinema leaves a significant gap in studying animated films With the almost total pervasiveness of animation today this collection provides the reader with a greater sense of how the animated landscapes of the present relate to those of the past Including essays from international perspectives Animated Landscapes introduces an idea that has seemed literally to be in the background of animation studies The collection provides a timely counterpoint to the dominance of character be that either animated

characters such as Mickey Mouse or real world personalities such as Walt Disney that exists within animation scholarship and film studies more generally Chapters address a wide range of topics including history case studies in national contexts including Australia Japan China and Latvia the traversal of animated landscape the animation of fantastical landscapes and the animation of interactive landscapes Animated Landscapes promises to be an invaluable addition to the existing literature for the most overlooked aspect of animation
