Wildlife Search And Rescue A Guide For First Responders:

Wildlife Search and Rescue Rebecca Dmytryk, 2011-12-14 Rescuing wild animals in distress requires a unique set of skills very different from those used in handling domestic animals. The equipment, degree of handling, the type of caging and level of care a wild animal receives can mean the difference between life and death. *Wildlife Search and Rescue* is a comprehensive guide on best practices and suggested standards for response to sick, injured and orphaned wildlife. This valuable resource covers the fundamentals of wildlife rescue from phone to field, including safe and successful capture strategies, handling and restraint techniques, and initial aid. *Wildlife Search and Rescue* is a must have for anyone interested in knowing what to do when they are face to face with a wild animal in need or for anyone involved in animal rescue. While the book focuses on wildlife native to North America, much of the information and many of the techniques are applicable to other species including domestic dogs and cats. Leif Brostrom DeVaney, 2025-07-26 In this book Leif DeVaney brings the

traditional philosophical branches of metaphysics and ethics to bear on conservation biology While many previous attempts at asking and answering ethical questions related to conservation and other environmentally relevant activities exist few such attempts have engaged adequately with the rock bottom approach of metaphysics Through this metaphysically realistic lens the ontological status of the population as well as other ecological wholes is challenged DeVaney argues that individual nonhuman animals are found to have interests that parallel human interests These include the biotic goals of survival and reproduction as well as freedom from undue pain and suffering From an ethical standpoint the conclusion differs drastically from the dominant consequentialist contention that the good of some can be sacrificed for the supposed greater good of the many DeVaney initiates the establishment of the subdiscipline of conservation metaphysics which naturally leads to a theoretically grounded ethic
