focus on network devices necessary Because criminals are targeting networks and network devices require a fundamentally different approach than the process taken with traditional forensics By hacking a router an attacker can bypass a network s firewalls issue a denial of service DoS attack to disable the network monitor and record all outgoing and incoming traffic or redirect that communication anywhere they like But capturing this criminal activity cannot be accomplished with the tools and techniques of traditional forensics While forensic analysis of computers or other traditional media typically involves immediate shut down of the target machine creation of a duplicate and analysis of static data this process rarely recovers live system data So when an investigation focuses on live network activity this traditional approach obviously fails Investigators must recover data as it is transferred via the router or switch because it is destroyed when the network device is powered down In this case following the traditional approach outlined in books on general computer forensics techniques is not only insufficient but also essentially harmful to an investigation Jargon buster A network switch is a small hardware device that joins multiple computers together within one local area network LAN A router is a more sophisticated network device that joins multiple wired or wireless networks together The only book devoted to forensic analysis of routers and switches focusing on the operating system that runs the vast majority of network devices in the enterprise and on the Internet Outlines the fundamental differences between router forensics and traditional forensics a critical distinction for responders in an investigation targeting network activity Details where network forensics fits within the entire process of an investigation end to end from incident response and data collection to preparing a report and legal testimony **Advances in Cyberology and the Advent of the Next-Gen Information Revolution** Husain, Mohd Shahid,Faisal, Mohammad,Sadia, Halima,Ahmad, Tasneem,Shukla, Saurabh,2023-06-27 The past decade has witnessed a leap in the cyber revolution around the world Significant progress has been made across a broad spectrum of terminologies used in the cyber world Various threats have also emerged due to this cyber revolution that requires far greater security measures than ever before In order to adapt to this evolution effectively and efficiently it calls for a better understanding of the ways in which we are ready to embrace this change Advances in Cyberology and the Advent of the Next Gen Information Revolution creates awareness of the information threats that these technologies play on personal societal business and governmental levels It discusses the development of information and communication technologies ICT their connection with the cyber revolution and the impact that they have on every facet of human life Covering topics such as cloud computing deepfake technology and social networking this premier reference source is an ideal resource for security professionals IT managers administrators students and educators of higher education librarians researchers and academicians **Advances in Digital Forensics IX** Gilbert Peterson,Sujeet Shenoi,2013-10-09 Digital forensics deals with the acquisition preservation examination analysis and presentation of electronic evidence Networked computing wireless communications and portable electronic devices have expanded the role of digital forensics beyond traditional computer crime investigations Practically every crime now involves
