Visual C#.NET Windows Forms Programming with C# By Max Beerbohm

Windows Forms is a Graphical User Interface (GUI) class library which is bundled in the .NET Framework. Its main purpose is to provide an easier interface to develop the applications for desktop, tablet, PCs. It is also termed as the WinForms. The applications which are developed by using Windows Forms or WinForms are known as the Windows Forms Applications that run on the desktop computer. WinForms can be used only to develop the Windows Forms Applications, not web applications. WinForms applications can contain the different type of controls like labels, list boxes, tooltip, etc. A Windows form application is an application which is designed to run on a computer. It will not run on a web browser because then it becomes a web application. This Tutorial will focus on how we can create Windows-based applications. We will also learn some basics on how to work with the various elements of Windows applications. In this book, you will learn:
