The Burren (Collins New Naturalist Library, Book 138) David Cabot, Roger Goodwillie,2018-11-29 The Burren is one of those rare and magical places where geology, glacial history, botany, zoology and millennia of cultural history have converged to create a unique landscape of extraordinary natural history interest. It is without equal to any other area in Ireland or Britain.

A Nature Conservation Review: Volume 1 Derek Ratcliffe,2012-01-26 This 1977 book analyses and describes the wild flora and fauna of Britain and identifies important sites that exemplify this rich heritage.

Marjorie Blamey's Flowers of the Countryside Philip Blamey,1980 Marjorie and Philip Blamey have travelled the world to record and paint rare and beautiful plants but this book is a personal celebration of their favorite subject: the wild flowers of their own countryside.

The Orchid Hunter Leif Bersweden,2018-04-12 He has just a few months to complete his quest: no one has ever done it before within one growing season and it will require ingenuity, stamina and a large dose of luck. As he battles the vagaries of the British climate feverishly chasing each emerging bloom, Leif Bersweden takes the reader on a remarkable botanical journey. This study of the 52 native species is a fantastic gateway into the compendious world of orchids, one that will open your eyes to the rare hidden delights to be found on our doorstep. Like *Two Owls at Eton* and *My Family and Other Animals*, *The Orchid Hunter* is a charming account of a precocious adolescent's obsession with the natural world. Leif's enthusiasm for his quest is infectious, as is the quiet conviction with which he keeps at it, showing how plant hunting can be the ultimate mindful activity.

Bach Flower Remedies Julian Barnard,2004 Today disease and death control us ever more strongly with a litany of viruses, cancers and heart disorders. The causes may be vaccinations, environmental poisons, despoliation of food or pollution of the elements: earth, water and air. For Bach, the cause was clear and it is clear today. It is only because we have forsaken Nature's way for man's way that we have suffered and we have only to return to be released from our trials. In the presence of the way of Nature, disease has no power, all fear, all depression, all hopelessness can be set aside. There is no disease of itself which is incurable. Julian Barnard. In the 1920s the physician and homeopath Dr Edward Bach made his great discovery of the healing effects of various flower essences. Intense and revelatory, his experiences in nature resulted in thirty-eight flower remedies. He describes these as bringing courage to the fearful, peace to the anguished and strength to the weak. But the therapeutic effects of the remedies were never limited to emotional states. They are equally effective in the treatment of physical disorders. Barnard begins the process of explaining this phenomenon. He describes how Bach made his discoveries and examines the living qualities of the plants in their context.

and how the remedies are actually produced The result is remarkable The author recounts his observations so that readers can experience in a living way the complex ways in which the remedy plants grow their gestures and qualities ecology botany and behavior This exciting book is a trumpet call to attend to nature in a new way Fully illustrated **Rare Plants** Peter Marren, 2024-11-28 A beautifully written and illustrated account of the threatened plant species that inhabit the British Isles Britain and Ireland are home to around 300 species of rare flowering plants and many more rare ferns mosses liverworts and freshwater algae These are species at the cutting edge of biodiversity fascinating often beautiful and in decline Yet as some teeter on the brink more rare species are still being discovered In **Rare Plants** prize winning author Peter Marren describes the allure of Britain and Ireland's vanishing wild flora from the simple joy of plant hunting to the wonder and sometimes weirdness of the plants themselves as well as their important place in our landscape and culture He also explores the condition of rarity in the context of our changing world and climate why do plants become rare what threats do they face and what opportunities do we have to protect them before it is too late The book concludes with an overview of different conservation techniques Using test cases such as Lady's Slipper Orchid and Starved Wood sedge Peter asks at what point does careful management become gardening And how far are we justified in intervening in the life of a wild species Illustrated with around 300 colour images by some of Britain's best plant photographers as well as boxed texts telling the fascinating stories of several key species this is above all a celebration of rare plants and why they matter **Trace Metals in the Environment and Living Organisms** Philip S. Rainbow, 2018-08-23 Trace metals play key roles in life all are toxic above a threshold bioavailability yet many are essential to metabolism at lower doses It is important to appreciate the natural history of an organism in order to understand the interaction between its biology and trace metals The countryside and indeed the natural history of the British Isles are littered with the effects of metals mostly via historical mining and subsequent industrial development This fascinating story encompasses history economics geography geology chemistry biochemistry physiology ecology ecotoxicology and above all natural history Examples abound of interactions between organisms and metals in the terrestrial freshwater estuarine coastal and oceanic environments in and around the British Isles Many of these interactions have nothing to do with metal pollution All organisms are affected from bacteria plants and invertebrates to charismatic species such as seals dolphins whales and seabirds All have a tale to tell **Indicator Plants: Using Plants to Evaluate the Environment** Paul L. Smith, 2013 The guide looks at how plants may be used to read the environment essentially treating them as indicators of the state of the habitat where they are found It was written with three sets of people in mind 1 Junior ecological consultants who want to improve their Phase 1 Habitat Surveys with botanical target notes useful in ecological assessment 2 Students of ecology who need to use plants to interpret the landscape around them and understand habitats in greater detail 3 Amateur naturalists and walkers who seek to enrich their experience of the countryside through a knowledge of plants Compiled from a range of published sources and from the author's personal
