Wildland Fires and Air Pollution Andrzej Bytnerowicz, 2009 Wildland fires are one of the most devastating and terrifying forces of nature While their effects are mostly destructive they also help with regeneration of forests and other ecosystems Low intensity fires clear accumulating biomass reducing risk of catastrophic crown fires and can be used as an effective management tool This book presents current understanding of wildland fires and air quality as well as their effects on human health forests and other ecosystems in the first section of the book the basics of wildland fires and resulting emissions are presented from the perspective of changing global climate air quality impairment and effects on environmental and human health and security in the second section effects of wildland fires on air quality visibility and human health in various regions of the Earth are discussed The third section of the book deals with complex issues of the ecological impacts of fires and air pollution in forests and chaparral in North America The fourth section discusses various management issues facing land and fire managers which are related to wildfires use of prescribed fires and air quality This section also presents various modeling systems used for describing fire dangers and behavior as well as smoke and air pollution predictions applied in the risk assessment analysis The book concludes with a series of expert recommendations for wildland fire and atmospheric research
