Anthropology and Cryptozoology Samantha Hurn, 2016-11-03 Cryptozoology is best understood as the study of animals which in the eyes of Western science are extinct unclassified or unrecognised In consequence and in part because of its selective methods and lack of epistemological rigour cryptozoology is often dismissed as a pseudo science However there is a growing recognition that social science can benefit from engaging with it for as social scientists are very well aware scientific categorisation and explanation represents just

one of a myriad of systems used by humans to enable them to classify and make sense of the world around them In many cultural contexts myth folk classification and lived experience challenge the truth expounded by scientists With a reflexive anthropological approach and drawing on rich empirical and ethnographic studies from around the world this volume engages with the theoretical and methodological issues raised by reported sightings of unrecognised animals Bringing into sharp focus the anthropological value and challenges for methodology posed by beliefs about unclassified creatures

Anthropology and Cryptozoology Exploring encounters with mysterious creatures will be of interest to anthropologists sociologists and geographers working in the fields of research methods anthrozoology mythology and folklore and human animal interaction

Birds for Beginners in Southern Africa Philip Coetsee, 2002

The Biology of African Savannas Bryan Shorrocks, William Bates, 2014-11-27 Savannah habitats comprise an ecologically important but ultimately fragile ecosystem They constitute one of the largest biomes on Earth covering almost 20% of the land surface and can be simply described as tropical and subtropical grasslands with scattered bushes and trees Most savannas occur in Africa although smaller areas can be found in South America India and Australia They form a rich mosaic of diverse ecosystems and this book offers a concise but comprehensive introduction to their ecology biodiversity and conservation The Biology of African Savannas describes the major plants grasses and trees such as Acacia and animals mainly large mammals that live in this habitat and examines the biological and ecological factors that influence their population size interactions such as predation and community composition Conservation issues such as

climate change hunting and conflict between wildlife and domestic animals are also discussed This new edition has been updated throughout with the latest research in the field and contains new technique boxes which introduce readers to some of the analytical methods used to study African savannahs This accessible text is suitable for both senior undergraduate and graduate students taking courses in savannah and tropical ecology as part of a wider ecology and or conservation biology degree programme It will also be of relevance and use to the many professional ecologists and conservation practitioners requiring a concise but authoritative overview of the topic
