Wind Towers Detail In Building:

Wind Towers Battle McCarthy Consulting Engineers, 1999-08-10 The Detail in Building series is an essential source of contemporary data covering the key elements of building design that form the vocabulary of current architecture Each is clearly analysed both historically and in terms of recent examples by key practices around the world The combination of building context design aesthetics and technical solution as revealed in the case studies is highly informative as well as unique in a field where specific technical quality of design detailing is often insufficiently exposed by the superficial presentation of designs Wind Towers is the sixth title in the series From the earliest times buildings including igloos adobe huts and even termitaries have been designed to utilise natural conditions for heating cooling and ventilation Today as structures become larger and lighter there has been an increasing need for a better understanding of wind behaviour This has been achieved through knowledge gained from the aeronautical industry which has provided more accurate wind data and airflow testing facilities Ecological concerns also call for better methods of harnessing the free energy available from the environment as an alternative to harmful and expensive artificial air conditioning systems This book looks at techniques using natural forces to control temperature and ventilation by means of wind driven devices such as wind towers and wind scoops These are analysed and compared in terms of their advantages and applications Historical models dating back as far as the ancient Egyptian era are cited as precedents whilst the eighteen case studies provide contemporary examples of the various combinations of solutions that can be applied to a diverse range of buildings in different climates and conditions

Sustainability in Energy and Buildings John Littlewood, Robert J. Howlett, Alfonso Capozzoli, Lakhmi C. Jain, 2019-10-26 This volume contains the proceedings of the 11th KES International Conference on Sustainability and Energy in Buildings 2019 SEB19 held in Budapest 4th 5th July 2019 organised by KES International in partnership with Cardiff Metropolitan University Wales UK SEB 19 invited contributions on a range of topics related to sustainable buildings and explored innovative themes regarding sustainable energy systems The aim of the conference was to bring together researchers and government and industry professionals to discuss the future of energy in buildings neighbourhoods and cities from a theoretical practical implementation and simulation perspective The conference formed an exciting chance to present interact and learn about the latest research and practical developments on the subject The conference attracted submissions from around the world Submissions for the Full Paper Track were subjected to a blind peer review process Only the best of these were selected for presentation at the conference and publication in these proceedings It is intended that this volume provides a useful and informative snapshot of recent research developments in the important and vibrant area of Sustainability in Energy and Buildings

Architecture, City, Environment Koen Steemers, Simos Yannas, 2000 PLEA is a network of individuals sharing expertise in the arts sciences planning and design of the built environment It serves as an international interdisciplinary forum to promote discourse on environmental quality in architecture and planning This 17th

PLEA international conference addresses sustainable design with respect to architecture city and environment at the turn of the millennium The central aim of the conference is to explore the interrelationships and integration of architecture city and environment The Proceedings will be of interest to all those involved in bioclimatic design and the application of natural and innovative techniques to architecture and planning The conference is organised by the Martin Centre for Architectural and Urban Studies University of Cambridge and the Cambridge Programme for Industry University of Cambridge

Architectural, Energy and Information Engineering Wen-Pei Sung, Ran Chen, 2015-12-30 This proceedings volume brings together selected peer reviewed papers presented at the 2015 International Conference on Architectural Energy and Information Engineering AEIE 2015 held July 15 16 2015 in Hong Kong China The proceedings are divided into two parts Architectural Energy and Environmental Engineering and Information Engineering *Passive Solar Architecture* David Bainbridge, Ken Haggard, 2011-08-18 New buildings can be designed to be solar oriented naturally heated and cooled naturally lit and ventilated and made with renewable sustainable materials no matter the location or climate In this comprehensive overview of passive solar design two of America's solar pioneers give homeowners architects designers and builders the keys to successfully harnessing the sun and maximizing climate resources for heating cooling ventilation and daylighting Bainbridge and Haggard draw upon examples from their own experiences as well as those of others of more than three decades to offer both overarching principles as well as the details and formulas needed to successfully design a more comfortable healthy and secure place in which to live laugh dance and be comfortable Even if the power goes off Passive Solar Architecture also discusses greener and more sustainable building materials and how to use them and explores the historical roots of green design that have made possible buildings that produce more energy and other resources than they use *Sustainable Technologies for Nearly Zero Energy Buildings* Sašo Medved, Suzana Domjan, Ciril Arkar, 2019-01-28 This book presents cutting edge work on the energy efficiency and environmental sustainability of buildings examining EU policies regulations and technologies for complex systems such as passive buildings sustainable buildings and as part of the Energy Performance of Building Directive EPBD nearly Zero Energy Buildings nZEB requirements It explores a wide range of topics including indoor environment requirements building physics in situ experiments to determine the thermal properties of buildings nZEB requirements building service technology and methods of evaluating energy efficiency and environmental impacts It also provides an overview of the best available technologies for nZEB including those for the rational use of energy utilization of renewable energy sources EPBD systems and calculation methods This book is a valuable resource for students researchers and practitioners of urban planning and architecture civil and mechanical engineering *Modelling Methods for Energy in Buildings* Chris Underwood, Francis Yik, 2008-04-15 Climate change mitigation and sustainable practices are now at the top of political and technical agendas Environmental system modelling provides a way of appraising options and this book will make a significant contribution to the uptake of such systems It provides knowledge of the principles involved

in modelling systems builds confidence amongst designers and offers a broad perspective of the potential of these new technologies The aim of the book is to provide an understanding of the concepts and principles behind predictive modelling methods review progress in the development of the modelling software available and explore modelling in building design through international case studies based on real design problems **Towards Nearly Zero Energy** Annarita

Ferrante,2016-02-18 **Towards Nearly Zero Energy Urban Settings in the Mediterranean Climate** discusses tactics that can be used to effectively reduce energy consumption towards zero energy With energy usage in buildings accounting for over 40% of primary energy use and 24% of greenhouse gas emissions worldwide this remains an unavoidable objective The book looks at the life of the systems of energy production from renewable sources amidst the exceptionally challenging global economic crisis that the Mediterranean areas and other societies are currently experiencing By using an innovative and interdisciplinary approach of socio oriented technological design the book indicates tools and measures that can be developed at the public legislative and market levels to counterbalance the large pay back times of energy efficiency measures In particular the book displays guidelines and best practices to activate new forms of economic incentives in order to attract potential investors that demonstrate that a large set of possible solutions is technically feasible to achieve nearly zero energy even in high energy consuming circumstances and urban settings Furthermore by discussing and comparing the economic and energy impact of different technology options this work offers guidelines and best practices to activate new cost effective forms and social incentives in order to attract both potential investors and motivate the urban stakeholders toward nearly zero energy Strategies and zero energy solutions for practitioners Policy s and economic resolutions to combat legislative barriers Examples and case studies of nearly zero energy urban environments **Germany Transportation**

The Sustainable Tall Building Philip Oldfield,2019-03-27 The Sustainable Tall Building A Design Primer

is an accessible and highly illustrated guide which primes those involved in the design and research of tall buildings to dramatically improve their performance Using a mixture of original research and analysis best practice design thinking and a detailed look at exemplar case studies author Philip Oldfield takes the reader through the architectural ideas engineering strategies and cutting edge technologies that are available to the tall building design team The book takes a global perspective examining high rise design in different climates cultures and contexts It considers common functions such as high rise housing and offices to more radical designs such as vertical farming and vertical cemeteries Innovation is provided by examining not only the environmental performance of tall buildings but also their social sustainability guiding the reader through strategies to create successful communities at height The book starts by critically appraising the sustainability of tall building architecture past and present before demonstrating innovative ways for future tall buildings to be designed These include themes such as climatically responsive architecture siting a tall building in the city zero carbon towers skygardens and community spaces at height sustainable structural systems and novel fa ades In doing so the book provides essential reading for architects engineers consultants developers researchers and students engaged with sustainable design and high rise architecture

Sustainability in Energy and Buildings Shaun H. Lee,2009-12-24 This volume represents the

proceedings of the First International Conference on S tainability in Energy and Buildings SEB 09 held in the City of Brighton and Hove in the United Kingdom organised by KES International with the assistance of the World Renewable Energy Congress Network and hosted by the University of Brighton KES International is a knowledge transfer organisation providing high quality c ference events and publishing opportunities for researchers The KES association is a community consisting of

several thousand research scientists and engineers who participate in KES activities For over a decade KES has been a leader in the area of Knowledge Based and Intelligent information and Engineering Systems Now KES is starting to make a contribution in the area of Sustainability and Renewable Energy with this first conference specifically on renewable energy and its application to domestic and other buildings Sustainability in energy and buildings is a topic of increasing interest and importance on the world agenda We therefore hope and intend that this first SEB event may grow and evolve into a conference series KES International is a member of the World Renewable Energy Congress Network which is Chaired by Professor Ali Sayigh We are grateful to Professor Sayigh for the collaboration and assistance of WREC Network in the organisation of SEB 09 We hope to continue to work with WREC Network in the future on projects of common interest

A Handbook on Low-Energy Buildings and District-Energy Systems L.D. Danny Harvey, 2012-08-21 Winner of Choice Magazine Outstanding Academic Titles for 2007 Buildings account for over one third of global energy use and associated greenhouse gas emissions worldwide Reducing energy use by buildings is therefore an essential part of any strategy to reduce greenhouse gas emissions and thereby lessen the likelihood of potentially catastrophic climate change Bringing together a wealth of hard to obtain information on energy use and energy efficiency in buildings at a level which can be easily digested and applied Danny Harvey offers a comprehensive objective and critical sourcebook on low energy buildings Topics covered include thermal envelopes heating cooling heat pumps HVAC systems hot water lighting solar energy appliances and office equipment embodied energy buildings as systems and community integrated energy systems cogeneration district heating and district cooling The book includes exemplary buildings and techniques from North America Europe and Asia and combines a broad holistic perspective with technical detail in an accessible and insightful manner

101 Rules of Thumb for Sustainable Buildings and Cities Huw Heywood, 2019-07-25 People across the world are becoming more aware of the need for the buildings and cities they live and work in to be

sustainable but the issue of how to be sustainable can seem a confusing and complex one. These rules of thumb provide universal guidelines for the sustainable design of both buildings and the urban realm. It is a global primer and textbook for anyone interested in understanding sustainability in the built environment, an ideal starting point for students as well as an aide memoir for more experienced readers and practitioners interested in this field.
