

LEAP YEAR COMPREHENSION

Understanding Leap Year

A leap year is a special year that has one extra day added in February. Usually, February has 28 days, but during a leap year, it has 29 days. This extra day is called a leap day.

But why do we have leap years? Well, it all has to do with keeping our calendars accurate. Earth actually takes about 365 and a quarter days to orbit around the sun. To make up for this extra, we add an extra day every four years.

The idea of a leap year dates back to ancient times when people noticed that the seasons would slowly shift if we didn't adjust our calendars. The ancient Egyptians were one of the first civilizations to come up with a similar concept to the leap year that we use today.

You might be wondering, what happens if we didn't have leap years? Over time, our calendar dates would be completely off. Summer could end up in December, and winter in June. Leap years help us stay in sync with the way our planet moves around the sun.

The most important thing to remember is that a leap year happens every four years, but there are some exceptions. For example, a year that is divisible by 100 is not a leap year unless it is also divisible by 400. This rule might sound a little tricky, but it's what keeps our calendars accurate.

So, the next time you see February 29th on your calendar, you'll know that it's a special day that helps us keep track of time in a way that matches up with the way our Earth moves through space.

- B) Crops would stop growing
- C) Calendar dates would be inaccurate
