

Virtual Yeast Fermentation Lab: Part 2

The Experiment

As a scientist, you are studying the rates of fermentation in yeasts using different substrates. In four test tubes you add a different substrate to live yeast cells, except for Tube 5 which contains water. Every 15 minutes, you measure the amount of glucose that is present in the tube and the amount of carbon dioxide (CO₂) that has been generated. After one hour, you analyze your results. Please answer the questions using the data in the table below.

	Tube 1 Glucose		Tube 2 Sucrose		Tube 3 Lactose		Tube 4 Lactose + Lactase		Tube 5 Water

Kornguth, 2012-12-06 Biotechnology is advancing at a rapid pace with numerous applications in medicine industry agriculture and environmental remediation Recognizing this government industrial and academic research and development investment in biotechnology has expanded rapidly The past decade has seen the emergence of applications of this technology with a dual use potential Military applications focus on four major areas biomedical technology such as vaccine development and medical diagnostics detection of toxins chemicals and pathogens material biotechnology and biological decontamination including biodegradation and bioremediation This conference emphasizes the non medical applications of biotechnology The first two sessions focus on the synthesis and properties of molecules that may be used in detectors The traditional approach to detection of chemical and biological agents relied on the development of specific assays or analyses for known agents Advances in molecular biology have made possible the production of large quantities of toxins which were previously available in minute quantities and the molecular engineering of toxins and pathogens with specific pharmacologic and physical chemical properties In addition to the traditional approaches to detection of specific known compounds biotechnology now offers generic approaches to detection

Physiological targets known as receptors are primary targets for many drugs and toxins. Similarly, pathogens rely on receptors to gain access to cells. These receptors function as sensitive detectors generating signals which are transduced and amplified. **A Study of Proteoclastic Activity of Flour** Andrew Cairns, 1927 *Journal of Agricultural Research*, 1929
