Video Based Surveillance Systems Computer Vision And Distributed Processing:

Video-Based Surveillance Systems Graeme A. Jones, Nikos Paragios, Carlo S. Regazzoni, 2012-12-06 Monitoring of public and private sites has increasingly become a very sensitive issue resulting in a patchwork of privacy laws varying from country to country though all aimed at protecting the privacy of the citizen It is important to remember however that monitoring and visual surveillance capabilities can also be employed to aid the citizen The focus of current development is primarily aimed at public and corporate safety applications including the monitoring of railway stations airports and inaccessible or dangerous environments Future research effort however has already targeted citizen oriented applications such as monitoring assistants for the aged and infirm route planning and congestion avoidance tools and a range of environmental monitoring applications The latest generation of surveillance systems has eagerly adopted recent technological developments to produce a fully digital pipeline of digital image acquisition digital data transmission and digital recording The resultant surveillance products are highly flexible capable of generating forensic quality imagery and able to exploit existing Internet and wide area network services to provide remote monitoring capability

Multisensor Surveillance Systems Gian Luca Foresti, Carlo S. Regazzoni, Pramod K. Varshney, 2012-12-06 Monitoring of public and private sites is increasingly becoming a very important and critical issue especially after the recent flurry of terrorist attacks including the one on the World Trade Center in September 2001 It is therefore imperative that effective multisensor surveillance systems be developed to protect the society from similar attacks in the future The new generation of surveillance systems to be developed have a specific requirement they must be able to automatically identify criminal and terrorist activity without sacrificing individual privacy to the extent possible Privacy laws concerning monitoring and surveillance systems vary from country to country but in general they try to protect the privacy of their citizens Monitoring and visual surveillance has numerous other applications It can be employed to help invalids or handicapped and to monitor the activities of elderly people It can be used to monitor large events such as sporting events as well Nowadays monitoring is employed in several different contexts including transport applications such as monitoring of railway stations and airports dangerous environments like nuclear facilities or traffic flows on roads and bridges The latest generation of surveillance systems mainly rely on hybrid analog digital or completely digital video communications and processing methods and take advantage of the greater flexibility offered by video processing algorithms that are capable focusing a human operator's attention on a set of interesting situations

*Shoaling with Fish: Using Miniature Robotic Agents to Close the Interaction Loop with Groups of Zebrafish *Danio rerio** Frank Bonnet, Francesco Mondada, 2019-05-30 Robotic animals are nowadays developed for various types of research such as bio inspired robotics biomimetics and animal behavior studies More specifically in the case of collective animal behavior research the robotic device can interact with animals by generating and exploiting signals relevant for social behavior Once perceived by the animal society as conspecific these robots can become powerful tools to study the animal behaviors as they can at the same time monitor the changes in

behavior and influence the collective choices of the animal society In this book we present novel robotized tools that can integrate shoals of fish in order to study their collective behaviors We used the current state of the art on the zebrafish social behavior to define the specifications of the robots and we performed stimuli analysis to improve their developments Bio inspired controllers were designed based on data extracted from experiments with zebrafish for the robots to mimic the zebrafish locomotion underwater Experiments involving mixed groups of fish and robots qualified the robotic system to be integrated among a zebrafish shoal and to be able to influence the collective decisions of the fish These results are very promising for the field of animal robot interaction studies as we showed the effect of the robots in long duration experiments and repetitively with the same order of response from the animals
