Vibrational Spectroscopy Of Molecules And Macromolecules On Surfaces:

Vibrational Spectroscopy of Molecules and Macromolecules on Surfaces Marek W. Urban, 1993 This comprehensive overview tackles the vibrational spectroscopic features of both small and large molecules on surfaces and details the theory and practice of normal coordinate analysis with simple matrix calculation bulk and surface spectroscopy all necessary band assignments and the structural identification and structure property relations of monomers and polymers on surfaces

Surface and Interface Analysis Rudolf Holze, 2008-10-08 A broad almost encyclopedic overview of spectroscopic and other analytical techniques useful for investigations of phase boundaries in electrochemistry is presented The analysis of electrochemical interfaces and interphases on a microscopic even molecular level is of central importance for an improved understanding of the structure and dynamics of these phase boundaries The gained knowledge will be needed for improvements of methods and applications reaching from electrocatalysis electrochemical energy conversion biocompatibility of metals corrosion protection to galvanic surface treatment and finishing The book provides an overview as complete as possible and enables the reader to choose methods most suitable for tackling his particular task It is nevertheless compact and does not flood the reader with the details of review papers

Handbook of Infrared Spectroscopy of Ultrathin Films Valeri P. Tolstoy, Irina Chernyshova, Valeri A. Skryshevsky, 2003-06-10 Because of the rapid increase in commercially available Fourier transform infrared spectrometers and computers over the past ten years it has now become feasible to use IR spectrometry to characterize very thin films at extended interfaces At the same time interest in thin films has grown tremendously because of applications in microelectronics sensors catalysis and nanotechnology The Handbook of Infrared Spectroscopy of Ultrathin Films provides a practical guide to experimental methods up to date theory and considerable reference data critical for scientists who want to measure and interpret IR spectra of ultrathin films This authoritative volume also Offers information needed to effectively apply IR spectroscopy to the analysis and evaluation of thin and ultrathin films on flat and rough surfaces and on powders at solid gaseous solid liquid liquid gaseous liquid liquid and solid solid interfaces Provides full discussion of theory underlying techniques Describes experimental methods in detail including optimum conditions for recording spectra and the interpretation of spectra Gives detailed information on equipment accessories and techniques Provides IR spectroscopic data tables as appendixes including the first compilation of published data on longitudinal frequencies of different substances Covers new approaches such as Surface Enhanced IR spectroscopy SEIR time resolved FTIR spectroscopy high resolution microspectroscopy and using synchrotron radiation
