Figure 2.13: AMPS Mobile Terminated call

Task description:

- **Step #1:** MSC sends the ID of the MS to the BS.
- **Step #2:** The BS constructs a page control message. The ID information (ESN, MSN, and SID) is added to the message as is the initial voice channel information.
- **Step #3:** The MS responds to the page by returning identification information over the RICC in a page response message.
- **Step #4:** Another control message is sent over the FICC by the BS that contains an SCC value to inform the mobile as to the correct SAT to be used on the voice channel.
- **Step #5:** The base and mobile station both switch to the voice channels and alternately use SAT tones to verify the radio link (step #6 and #7).
- **Step #8:** After this last handshake occurs, the traffic channel is then opened to conversation.
