

Keys to Bacteria

Appendix H deals with the identification of bacteria. The information is arranged in **dichotomous keys**. In a dichotomous key, identification is based on successive questions, each of which has two possible answers (*di-* means two). After answering each question, the investigator is directed to another question until

an organism is identified. There is no single “correct” way to write a key; the goal is to conclude with one unambiguous identification. These keys do not include all bacteria. You should refer to *Bergey’s Manual* to verify your identification.
