Bunge,2012-12-06 In this Introduction we shall sketch the business of ontology or metaphysics and shall locate it on the map of learning This has to be done because there are many ways of construing the word ontology and because of the bad reputation metaphysics has suffered until recently a well deserved one in most cases 1 ONTOLOGICAL PROBLEMS Ontological or metaphysical views are answers to ontological questions And ontological or metaphysical questions are questions with an extremely wide scope such as Is the world material or ideal or perhaps neutral Is there radical novelty and if so how does it come about Is there objective chance or just an appearance of such due to human ignorance How is the mental related to the physical Is a community anything but the set of its members and Are there laws of history Just as religion was born from helplessness ideology from conflict and technology from the need to master the environment so metaphysics just liketheoretical science was probably begotten by the awe and bewilderment at the boundless variety and apparent chaos of the phenomenal world i e the sum total of human experience Like the scientist the metaphysician looked and looks for unity in diversity for pattern in disorder for structure in the amorphous heap of phenomena and in some cases even for some sense direction or finality in reality as a whole **Mario Bunge: A Centenary Festschrift** Michael R. Barseghyan, 2015-08-17 This book systematically creates a general descriptive theory of scientific change that explains the mechanics of changes in both scientific theories and the methods of their assessment. It was once believed that while scientific theories change through time their change itself is governed by a fixed method of science. Nowadays we know that there is no such thing as an unchangeable method of science; the criteria employed by scientists in theory evaluation also change through time. But if that is so, how and why do theories and methods change? Are there any general laws that govern this process, or is the choice of theories and methods completely arbitrary and random? Contrary to the widespread opinion, the book argues that scientific change is indeed a law-governed process and that there can be a general descriptive theory of scientific change. It does so by first presenting meta-theoretical issues divided into chapters on the scope, possibility, and assessment of theory of scientific change. It then builds a theory about the general laws that govern the process of scientific change and goes into detail about the axioms and theorems of the theory. **Computing with Words in**

Information/Intelligent Systems 1 Lotfi A. Zadeh, 2013-03-09 These two volumes consisting of Foundations and Applications provide the current status of theoretical and empirical developments in computing with words. In philosophy, the twentieth century is said to be the century of language. This is mainly due to Wittgenstein, who said: "The meaning of a word is its use in the language game." The concept game is a concept with blurred edges. In the first phrase, the language game implies the everyday human activity with language, and in the latter game, it simply implies an ordinary word. Thus, Wittgenstein precisely stated that a word is fuzzy in real life. Unfortunately, this idea about a word was not accepted in the conventional science. We had to wait for Zadeh's fuzzy sets theory. Remembering Wittgenstein's statement, we should consider on the one hand the concept of computing with words from a philosophical point of view. It deeply relates to the everyday use of a word in which the meaning of a word is fuzzy in its nature. *The SAGE Handbook of Research Methods in Political Science and*
