Future Generation Information Technology Jung-Hyun Lee, Byeong-Ho Kang, Dominik Ślęzak, 2010-11-26 As information technology IT becomes specialized and fragmented it is easy to lose sight that many topics have common threads and because of this advances in one s discipline may transmit to another The presentation of results between different s disciplines encourages this interchange for the advancement of IT as a whole This volume comprises the selection of papers presented at the Second International Mega Conference on Future Generation Information Technology FGIT 2010 composed of the following 11 international conferences Advanced Software Engineering and Its Applications ASE 2010 Bio Science and Bio Technology BSBT 2010 Control and Automation CA 2010 Disaster Recovery and Business Continuity DRBC 2010 Database Theory and Application DTA 2010 Future Generation Communication and Networking FGCN 2010 Grid and Distributed Computing GDC 2010 Multimedia Computer Graphics and Broadcasting MulGraB 2010 Security Technology SecTech 2010 Signal Processing Image Processing and Pattern Recognition SIP 2010 as well as u and e Service Science and Technology UNESST 2010 In total 1 630 papers were submitted to FGIT 2010 from 30 countries The submitted papers went through a rigorous reviewing process and 395 papers were accepted Of these 395 papers 60 were assigned to this volume In addition this volume contains 7 invited papers and abstracts Of the remaining accepted papers 269 were distributed among 8 volumes of proceedings published by Springer in the CCIS series 66 papers were withdrawn due to technical reasons

Synchronization and Arbitration in Digital Systems David J. Kinniment, 2008-02-28 Today s networks of processors on and off chip operating with independent clocks need effective synchronization of the data passing between them for reliability When two or more processors request access to a common resource such as a memory an arbiter has to decide which request to deal with first Current developments in integrated circuit processing are leading to an increase in the numbers of independent digital processing elements in a single system With this comes faster communications more networks on chip and the demand for more reliable more complex and higher performance synchronizers and arbiters Written by one of the foremost researchers in this area of digital design this authoritative text provides in depth theory and practical design solutions for the reliable working of synchronization and arbitration hardware in digital systems The book provides methods for making real reliability measurements both on and off chip evaluating some of the common difficulties and detailing circuit solutions at both circuit and system levels Synchronization and Arbitration in Digital Systems also presents mathematical models used to estimate mean time between failures in digital systems a summary of serial and parallel communication techniques for on chip data transmission explanations on how to design a wrapper for a locally synchronous cell highlighting the issues associated with stoppable clocks an examination of various types of priority arbiters using signal transition graphs to show the specification of different designs from the simplest to more complex multi way arbiters including ways of solving problems encountered in a wide range of applications essential information on systems

composed of independently timed regions including a discussion on the problem of choice and the factors affecting the time taken to make choices in electronics With its logical approach to design methodology this will prove an invaluable guide for electronic and computer engineers and researchers working on the design of digital electronic hardware Postgraduates and senior undergraduate students studying digital systems design as part of their electronic engineering course will struggle to find a resource that better details the information given inside this book **Embedded Systems** Krzysztof

Iniewski,2012-10-26 Covers the significant embedded computing technologies highlighting their applications in wireless communication and computing power An embedded system is a computer system designed for specific control functions within a larger system often with real time computing constraints It is embedded as part of a complete device often including hardware and mechanical parts Presented in three parts Embedded Systems Hardware Design and Implementation provides readers with an immersive introduction to this rapidly growing segment of the computer industry Acknowledging the fact that embedded systems control many of today s most common devices such as smart phones PC tablets as well as hardware embedded in cars TVs and even refrigerators and heating systems the book starts with a basic introduction to embedded computing systems It hones in on system on a chip SoC multiprocessor system on chip MPSoC and network on chip NoC It then covers on chip integration of software and custom hardware accelerators as well as fabric flexibility custom architectures and the multiple I O standards that facilitate PCB integration Next it focuses on the technologies associated with embedded computing systems going over the basics of field programmable gate array FPGA digital signal processing DSP and application specific integrated circuit ASIC technology architectural support for on chip integration of custom accelerators with processors and O S support for these systems Finally it offers full details on architecture testability and computer aided design CAD support for embedded systems soft processors heterogeneous resources and on chip storage before concluding with coverage of software support in particular O S Linux Embedded Systems Hardware Design and Implementation is an ideal book for design engineers looking to optimize and reduce the size and cost of embedded system products and increase their reliability and performance **Anatomy of a Silicon Compiler** Robert W.

Brodersen,2012-12-06 A silicon compiler is a software system which can automatically generate an integrated circuit from a user s specification Anatomy of a Silicon Compiler examines one such compiler in detail covering the basic framework and design entry the actual algorithms and libraries which are used the approach to verification and testing behavioral synthesis tools and several applications which demonstrate the system s capabilities **Technical Reports Awareness Circular :**

Hardware Design and Simulation in VAL/VHDL Larry M. Augustin,David C. Luckham,Benoit A. Gennart,Youm Huh,A. Stanculescu,2012-12-06 The VHSIC Hardware Description Language VHDL provides a standard machine processable notation for describing hardware VHDL is the result of a collaborative effort between IBM Intermetrics and Texas

Instruments sponsored by the Very High Speed Integrated Circuits VHSIC program office of the Department of Defense beginning in 1981. Today it is an IEEE standard 1076-1987 and several simulators and other automated support tools for it are available commercially. By providing a standard notation for describing hardware especially in the early stages of the hardware design process, VHDL is expected to reduce both the time lag and the cost involved in building new systems and upgrading existing ones. VHDL is the result of an evolutionary approach to language development starting with high level hardware description languages existing in 1981. It has a decidedly programming language flavor resulting both from the orientation of hardware languages of that time and from a major requirement that VHDL use Ada constructs wherever appropriate. During the 1980s there has been an increasing current of research into high level specification languages for systems particularly in the software area and new methods of utilizing specifications in systems development. This activity is worldwide and includes for example object oriented design, various rigorous development methods, mathematical verification and synthesis from high level specifications. VAL, VHDL Annotation Language, is a simple further step in the evolution of hardware description languages in the direction of applying new methods that have developed since VHDL was designed.

System-on-Chip Methodologies & Design Languages Peter J. Ashenden, Jean Mermet, Ralf Seepold, 2013-03-14. System on Chip Methodologies the Forum on Design Languages FDL held in Europe and the Asia Pacific Chip Design Language APChDL Conference. The papers cover a range of topics including design methods, specification and modeling languages, tool issues, formal verification, simulation and synthesis. The results presented in these papers will help researchers and practicing engineers keep abreast of developments in this rapidly evolving field. Scientific and Technical Aerospace Reports, 1995. Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.
